permanent basis, as allowed by Medicare statute outside of the circumstances of the PHE. This information would also be taken into consideration for future ratesetting under the PFS.

#### E. Effect of Changes Related to Scopes of Practice

As discussed in section II.G. Scopes of Practice for PFS Services, of this final rule, we will allow certain NPPs to supervise diagnostic tests, which would authorize NPs, CNSs, PAs, CNMs, and CRNAs to provide the appropriate level of supervision assigned to diagnostic tests, to the extent authorized under State law and scope of practice. As for all services they furnish, in accordance with statute, the NP, CNS or PA necessarily would be working either under physician supervision or in collaboration with a physician. This flexibility may increase the capacity and availability of practitioners who can supervise diagnostic tests, which would alleviate some of the demand on physicians as the only source to perform this particular function.

We solicited comment on state scope of practice rules and the extent to which they specified supervision requirements for the supervision of diagnostic tests. Some commenters provided information on specific tests and thoughts on what practitioners could supervise such tests, these commenters provided information indicating that psychological and neuropsychological diagnostic tests are not within the scope of practice of the proposed NPPs, and require special training only available to psychologists and physicians. While this information provides some context to our policy discussion, overall, we have not located national detailed information indicating the degree to which NPP scope of practice includes supervision of auxiliary staff, especially for the subset of services that are diagnostic tests and note that here is a wide range of diagnostic tests, from a simple strep throat swab to more sophisticated and/or invasive tests such as X-rays and cardiology procedures. We would need to understand the scope of practice for many types of auxiliary staff (some of whom are not licensed) who could potentially provide these tests under the supervision of an NPP, including

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

RNs, LPNs, medical assistants, radiologic technicians, and many others. However, as discussed earlier in this rule, our intent regarding this supervision flexibility is to allow NPPs with separate benefit categories under Medicare law to supervise the performance of diagnostic tests, regardless of the specific category of diagnostic tests, only to the extent their scope of practice and State laws authorize them to do so.

To the extent practice patterns change, there could be induced utilization that would increase costs, but this might be offset by reduced payment rates because direct payment to NPPs is at a lower rate than payment to physicians.

An alternative in the case of the provision concerning supervision of diagnostic tests was to maintain the status quo. That is, we noted that we could maintain the basic rule under § 410.32(b)(1) that allows only physicians as defined under Medicare law to supervise the performance of diagnostic tests. In that case, the pool of practitioners who could supervise diagnostic tests would remain at current levels and certain NPPs would be limited under Medicare from practicing to the full extent allowed by their state license and scope of practice.

We are finalizing the proposal to allow a physical therapist (PT) or occupational therapist (OT) – whether they are an enrolled private practice PT or OT or a therapist working for an institutional provider – who establishes a therapy maintenance program to assign the duties to a PTA or OTA, as clinically appropriate, to perform maintenance therapy services. We added this as a flexibility under the May 8<sup>th</sup> COVID-19 IFC for the duration of the PHE for COVID-19 based on respondents' feedback on scope of practice following the President's E.O. 13890. Our current requirements for maintenance therapy services restrict a PT's/OT's ability to delegate the performance of maintenance therapy services to PTAs and OTAs which is counter to the therapist's ability to use PTAs/OTAs in furnishing rehabilitative outpatient physical or occupational therapy services. In the CY 2021 PFS proposed rule (85 FR 50147), we proposed

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

to allow PTs/OTs to oversee and delegate to a PTA or OTA the performance of physical and occupational therapy services in the same way, whether the therapy services are part of a plan of care geared toward rehabilitative or maintenance therapy. While therapy services furnished by PTs/OTs and their PTAs/OTAs are separately payable when they occur in different time slots (that is, if the PT/PTA or OT/OTA work together at the same time in furnishing a service to the patient, only one service is payable), we noted that we did not believe that there would be an increase in utilization since it is of no consequence whether the PTA/OTA is furnishing the service as rehabilitative or maintenance therapy. Additionally, we note that beginning January 1, 2022, payment for services furnished in whole or in part by a PTA/OTA (when the part by the PTA/OTA separate from the part of furnished by the PT/OT exceeds 10 percent of the service) will be paid at a lower rate (85 percent of the PFS fee schedule amount) which could offset any nominal increase in service volume. The alternative option – maintaining the status quo to require the PT/OT to personally furnish all maintenance therapy services, would not address the mandates established in E.O. 13890. Currently, in SNF and home health settings when payment for therapy is made under Part A, maintenance therapy can be furnished by a PT/OT or delegated to be performed by a PTA/OTA, and this provision would permit this to occur in all settings when therapy is paid under Part B.

F. Effect of Changes to Bundled Payments under the PFS for Substance Use Disorders (HCPCS codes G2086, G2087, and G2088)

As discussed in section II.H. of this final rule, Valuation of Specific Codes, we are expanding the bundled payments described by HCPCS codes G2086, G2087, and G2088, finalized in the CY 2020 PFS final rule (84 FR 62673) to be inclusive of all SUDs. As noted in the CY 2020 PFS final rule (84 FR 62673), if a patient's treatment involves MAT, this bundled payment would not include payment for the medication itself. Billing and payment for

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

medications under Medicare Part B or Part D would remain unchanged. We note that payment for the codes would be budget neutral under the PFS and therefore have no cost impact on PFS spending; however, this policy may have impacts on billing practices and services provided.

Currently, the codes most frequently used when billing for treatment of SUD include the E/M visit codes, psychotherapy codes, SBIRT codes, and potentially the Behavioral Health Integration codes. HCPCS codes G2086-G2088 offer a bundled payment that would allow a more streamlined approach to billing in cases where all of the services described in the code descriptors are furnished. We note that these codes provide an option for billing, but are not required; therefore, in cases where only select services are being furnished, practitioners may continue to bill for the code that most accurately describes the service that was furnished, which could be, for example, an E/M visit code.

#### G. Effect of Modifications to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

Section 2005 of the Substance Use-Disorder Prevention That Promotes Opioid Recovery and Treatment for Patients and Communities (SUPPORT) Act established a new Medicare Part B benefit for OUD treatment services furnished by OTPs on or after January 1, 2020. As part of CY 2020 PFS rulemaking, we implemented coverage requirements, created new coding to describe bundled episodes of care for the treatment of OUD, and established payment methodologies to determine the payment amounts for the drug and non-drug components of an episode of care.

For CY 2021, we are creating two new add-on codes, one add-on code for nasal naloxone and another add-on code for injectable naloxone. Both add-on codes include a non-drug component for overdose education furnished in conjunction with naloxone. We are pricing nasal naloxone based upon the methodology set forth in section 1847A of the Act, except that the

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

payment amount shall be ASP + 0. The price being finalized for the nasal naloxone add-on code is \$92.13, which includes a payment of \$2.53 for overdose education. We are contractor-pricing the injectable naloxone and will also include a payment of \$2.53 for overdose education. We are limiting Medicare payment to OTPs for naloxone to one add-on code (HCPCS code G2215 or G2216) every 30 days, however, we will allow exceptions to this limit in the case where the beneficiary overdoses and uses the initial supply of naloxone dispensed by the OTP, to the extent that it is medically reasonable and necessary to furnish additional naloxone.

The estimated net Part B cost impact of the add-on codes for naloxone for CY 2021 is \$0.5 million. The estimated net Part B 10-year impact is \$5.6 million. This estimate is based on several assumptions. First, commenters noted that nasal naloxone is the most common formulation given to patients in an OTP and the price is being finalized is \$92.13. This cost is to be updated to reflect changes in the average sales price (ASP); however, since future ASP updates are not available, the Medicare Economic Index (MEI) was used as a proxy. Based on partial 2020 utilization of the OTP benefit through September, roughly 20,000 beneficiaries received treatment at an OTP at some point during that time. We assumed that this would reach 25,000 by the end of 2020, and growth in future years would be consistent with projected growth in Part B fee-for-service enrollment. We assumed that beneficiaries who are provided naloxone would receive at least one supply of nasal naloxone as a standard part of the program because they are likely to be at risk for an overdose. A much smaller portion would receive a second supply, since it would only be provided if the first supply has been used. We assumed that approximately 1.1 doses would be provided per beneficiary. This figure is based on an August 2020 OIG report regarding opioid use under Medicare Part D, and it represents the average number of prescriptions per person receiving naloxone between 2016 and 2019 (see Exhibit B-2

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

on page 14)<sup>150</sup>. We assumed that roughly 25 percent of beneficiaries receiving treatment OTPs would be provided with naloxone, because they may already have it from another source, and some OTPs may not have it available. The estimate also took into account that this benefit is not subject to beneficiary cost sharing. Additionally, any change to FFS benefits has an associated impact on payments to Medicare Advantage (MA) plans, so an adjustment was made to reflect this based on the projected distribution of spending in each year. Based on current projections, payments to MA plans represent roughly 46 percent of total Part B spending in 2022 this share and is expected to grow to almost 50 percent by 2030. . This estimate also takes into account a premium offset which represents the impact on the Medicare program due to the change in the Part B premium as a result of the new add-on payment to OTPs for naloxone. In other words, since benefit spending is higher, the Part B premium will also be higher, which partially offsets the impact on benefit spending. The Part B FFS enrollment projections and MEI assumptions are based on the President's Fiscal Year 2021 Budget baseline that was released in February of 2020.

We believe that the benefits associated with establishing payment for naloxone and overdose education in the OTP setting justify the cost of the provision. As noted in section II.I. of this final rule, Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs), U.S. Surgeon General Jerome M. Adams, M.D., M.P.H. released a public health advisory stating that, "Research shows that when naloxone and overdose education are available to community members, overdose deaths decrease in those communities. Therefore, increasing the availability and targeted distribution of naloxone is a critical component of our efforts to reduce opioid-related overdose

deaths and, when combined with the availability of effective treatment, to ending the opioid epidemic.”<sup>151</sup> We are adding naloxone and overdose education furnished in conjunction with naloxone to the definition of OUD treatment services in order to increase access to this important emergency treatment and to allow OTPs to be paid under Medicare for dispensing naloxone to Medicare beneficiaries who are receiving other OUD treatment services from the OTP. We believe allowing beneficiaries to access this important emergency treatment at the OTP may help decrease barriers to access because there are no copayments for services furnished by OTPs and beneficiaries will not need to visit a separate provider to access naloxone.

#### H. Other Provisions of the Regulation

##### 1. Clinical Laboratory Fee Schedule: Revised Data Reporting Period and Phase-in of Payment Reductions

In section III.A. of this final rule, we discuss statutory revisions to the data reporting period and phase-in of payment reductions. In accordance with section 105(a) of the FCAA and section 3718 of the CARES Act, we are making certain conforming changes to the data reporting and payment requirements in our regulations at part 414, subpart G. Specifically, for clinical diagnostic laboratory tests (CDLTs) that are not advanced diagnostic laboratory tests (ADLTs), we are revising § 414.504(a)(1) to indicate that initially, data reporting begins January 1, 2017 and is required every 3 years beginning January 2022. This revision delays the next data reporting period under the CLFS by 2 years, that is, it will require the next data reporting during the period of January 1, 2022 through March 31, 2022. Subsequently, the next private payor rate-based CLFS update will be effective January 1, 2023 instead of January 1, 2021. In addition, we are making conforming changes to our requirements for the phase-in of payment reductions to

---

<sup>151</sup> <https://www.hhs.gov/surgeongeneral/priorities/opioids-and-addiction/naloxone-advisory/index.html>

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

reflect the CARES Act amendments. Specifically, we are revising § 414.507(d) to indicate that for CY 2021, payment may not be reduced by more than 0.0 percent as compared to the amount established for CY 2020, and for CYs 2022 through 2024, payment may not be reduced by more than 15 percent as compared to the amount established for the preceding year.

We recognize that private payor rates for CDLTs paid on the CLFS and the volumes paid at each rate for each test, which are used to determine the weighted medians of private payor rates, have changed since the first data collection period (January 1, 2016 through June 30, 2016) and data reporting period (January 1, 2017 through March 31, 2017). In addition, as discussed in section III.A. of this final rule, in the CY 2019 PFS final rule (83 FR 59671 through 59676), we amended the definition of applicable laboratory to include hospital outreach laboratories that bill Medicare Part B using the CMS-1450 14x Type of Bill. As such, the conforming regulatory changes to the data reporting period would delay using updated private payor rate data and data reported by hospital outreach laboratories to set revised CLFS payment rates.

Due to the unforeseen changes in private payor rates, inclusion of hospital outreach laboratory data, and unpredictable nature of test volumes and their impact on calculating updated weighted medians private payor rates, we are uncertain as to whether the delay in data reporting would result in a measurable budgetary impact. In other words, in order to comprehend the impact of delayed reporting and subsequent implementation of updated CLFS rates, we would need to calculate weighted medians of private payor rates based on new data and compare the revised rates to the current rates. As such, we believe that we will only know the impact of the delay in data reporting after collecting actual updated applicable information from applicable laboratories, including the collection of private payor rate data from applicable hospital outreach laboratories, and calculate the updated weighted medians of private payor rates.

With regard to the conforming changes to our requirements for the phase-in of payment

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

reductions, we note that this revision shifts the 15 percent limitation on payment reductions from CYs 2021 through 2023, to CYs 2022 through 2024. Therefore, we believe this conforming regulatory amendment to the phase-in of payment reductions in § 414.507(d) is budget neutral for scoring purposes.

## 2. OTP Provider Enrollment Regulation Updates for Institutional Claim Submissions

We stated in section VII. of this final rule that:

- Section 424.67(b)(2) requires newly enrolling OTPs to pay an application fee at the time of enrollment under § 424.514.
- 300 currently enrolled OTPs would change their enrollment from a Form CMS-855B to a Form CMS-855A. We project that all such changes will occur in CY 2021.
- 10 OTPs that enroll using the Form CMS-855A would later change their enrollment to a Form CMS-855B. We project that these changes will occur in CY 2022 and CY 2023 (roughly 5 changes per year).

These 310 OTPs would be required to pay an application fee because said change to a Form CMS-855A or Form CMS-855B enrollment would constitute a new/initial enrollment.

The application fees for each of the past 3 calendar years (CY) were or are \$569 (CY 2018), \$586, (CY 2019), and \$595 (CY 2020). Consistent with § 424.514, the differing fee amounts are predicated on changes/increases in the Consumer Price Index (CPI) for all urban consumers (all items; United State city average, CPI-U) for the 12-month period ending on June 30 of the previous year. As stated in a notice published in the November 23, 2020 **Federal Register** titled “Medicare, Medicaid, and Children's Health Insurance Programs; Provider Enrollment Application Fee Amount for Calendar Year 2021” (85 FR 74724), the fee amount for CY 2021 will be \$599. This results in a total application fee cost for OTP changes to a Form CMS-855A enrollment of \$179,700 (\$599 x 300 OTPs).

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

Although we cannot predict changes to the CPI beyond CY 2021, the fee amounts between 2019 and 2021 increased by an average of \$6 per year. We believe this is a reasonable barometer with which to estimate (strictly for projecting the total application fee costs for the 10 OTPs that we believe will switch to a Form CMS-855B enrollment) the fees for CY 2022 and CY 2023. Accordingly, we project a fee of \$605 in CY 2022 and \$611 in CY 2023. This results in a total application fee cost of \$3,025 ( $\$605 \times 5$  OTPs) in CY 2022 and \$3,055 in CY 2023 ( $\$611 \times 5$  OTPs). Over the next 3 years, therefore, the total application fee cost will be \$185,780 ( $\$179,700 + \$3,025 + \$3,055$ ).

We received no comments on our application fee estimates.

### 3. Payment for Principal Care Management (PCM) Services in Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

After reviewing the PFS, FQHC, and RHC historical spending, including the first quarter of calendar year 2020 spending for the new principal care management codes under the PFS, we estimate the addition of these codes (G2064 and G2065) to G0511 would have a negligible impact on Medicare spending.

### 4. Changes to the Federally Qualified Health Center Prospective Payment System (FQHC PPS) for CY 2021: Rebasing and Revising of the FQHC Market Basket

The CY 2021 FQHC market basket and multi-factor productivity adjustment is 0.1 percentage point higher under the 2017-based FQHC market basket (1.7 percent) compared to under the 2013-based market basket (1.6 percent). Therefore, the economic impact of finalizing the FQHC market basket rebasing and revising for CY 2021 is approximately \$1M and we consider this impact to be negligible. We determined this amount by applying a factor of 0.001 to the FQHC baseline, which was approximately \$1,100 million in calendar year 2019. Over the next 10 years the rebasing methodology results in, at most, a difference of 0.1 percent compared

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

to the prior methodology but it is not always higher. The difference in the payment updates is projected to be higher in the next 2 years but then lower or the same beyond that. Therefore, this initial negligible cost decreases over time and overall estimated spending will likely be unaffected.

5. Comprehensive Screenings for Seniors: Section 2002 of the Substance Use-Disorder Prevention that Promote Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act)

We are implementing section 2002 of the Support Act by adding regulatory language to the existing Initial Preventive Physical Examination (IPPE) and Annual Wellness Visit (AWV) regulations to explicitly include elements regarding screening for potential substance use disorders and a review of current opioid prescriptions. We expect the new regulatory elements to add minimal burden since review of medical and social history, risk factor identification, education, counseling, and referrals are already fundamental parts of the IPPE and AWV. Standard documentation in the medical record that these services were furnished would not change based on these new requirements. We note that in section VIII.C.2.a. of this RIA, we discuss the increase in payment for E/M visits in general. Accordingly, the increase in payment for E/M visits applies to the IPPE and AWV and the impact to 2021 expenditures is included in section VIII.C.2.a. of this RIA.

6. Medicaid Promoting Interoperability Program Requirements for Eligible Professionals (EPs)

In the Medicaid Promoting Interoperability Program, to keep electronic clinical quality measure (eCQM) specifications current and minimize complexity, we are aligning the eCQMs available for Medicaid EPs in 2021 with those available for MIPS eligible clinicians for the CY 2021 performance period. We anticipate that this alignment will reduce burden for Medicaid EPs by aligning the requirements for multiple reporting programs, and that the system changes

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

required for EPs to implement this change will not be significant, as many EPs are expected to report eCQMs to meet the quality performance category of MIPS, and therefore, should be prepared to report on those eCQMs for 2021. Not implementing this alignment could lead to increased burden because EPs might have to report on different eCQMs for the Medicaid Promoting Interoperability Program, if they opt to report on newly added eCQMs for MIPS. We expect that this policy will have only a minimal impact on states, by requiring minor adjustments to state systems for 2021 to maintain current eCQM lists and specifications. Based on a sampling of funding requests, each state typically spends, on average, approximately \$670,000 per year to operate its Medicaid Promoting Interoperability Program attestation system for EPs. Only a small fraction of those costs is typically attributable to updating eCQM specifications. We estimate that the costs for updating eCQM specifications under the policy will be approximately \$100,000 per state. State expenditures to make any systems changes that will be required as a result of the provision will most likely be eligible for 90 percent federal financial participation.

For 2021, we are requiring that Medicaid EPs report on any six eCQMs that are relevant to the EP's scope of practice, including at least one outcome measure, or if no applicable outcome measure is available or relevant, at least one high priority measure, regardless of whether they report via attestation or electronically. This policy will generally align with the MIPS data submission requirement for eligible clinicians using the eCQM collection type for the quality performance category, which is established in § 414.1335(a)(1). If no outcome or high priority measure is relevant to a Medicaid EP's scope of practice, he or she could report on any six eCQMs that are relevant. This policy will be a continuation of our policy for 2020 and we believe it will not create new burden for EPs or states.

## 7. Medicare Shared Savings Program

### **INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

a. Modifications to the Shared Savings Program Quality Reporting Requirements and Quality Performance Standard for Performance Year 2021 and Subsequent Performance Years

In section III.G.1.c. of this final rule, we are finalizing a modified version of our original proposal to allow for a gradual phase-in of the increase in the level of quality performance that would be required for all ACOs to meet the Shared Savings Program quality performance standard and the retention of the CMS Web Interface collection type for performance year 2021. The quality performance standard is the minimum performance level ACOs must achieve in order to share in any savings earned, avoid maximum losses under certain payment tracks, and avoid quality-related compliance actions.

Specifically, we are finalizing that an ACO would meet the quality performance standard if:

- For performance years 2021 and 2022, the ACO achieves a quality performance score that is equivalent to or higher than the 30<sup>th</sup> percentile across all MIPS Quality performance category scores; and
- For performance year 2023 and subsequent performance years, the ACO achieves a quality performance score that is equivalent to or higher than the 40<sup>th</sup> percentile across all MIPS Quality performance category scores.

We are also finalizing our proposal to exclude entities/providers eligible for facility-based scoring from the determination of the overall MIPS Quality performance category score because facility-based scoring is determined using the Hospital Value Based Purchasing (HVBP) Total Performance Score (TPS), which includes quality and cost. Please refer to section III.G.1.c. of this final rule for a detailed discussion of the policies used to inform the impacts for the change to the quality performance standard.

Our analysis of quality performance data reported by ACOs for performance years

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

starting during 2019 indicates that the methodological changes in ACO quality scoring will reduce the mean ACO quality score relative to recent historical performance years where ACO quality performance scores have averaged 90 percent or more. Despite an expectation for a decreasing score for most ACOs and potentially a slight increase in the fraction of ACOs failing to achieve the minimum threshold for qualifying for potential shared savings, the provision is estimated to marginally increase overall shared savings payments to ACOs initially because ACOs that meet the quality performance standard will be eligible to share in savings at the maximum sharing rate, rather than subject to variable sharing rates based on their quality performance score. Our best estimate is that shared savings payments to ACOs will increase by \$60 million for the 2021 performance year because of these changes, representing an increase in shared savings payments of only about 3 percent of projected total gross measured savings for ACOs earning shared savings for that year. The corresponding estimated increase in payments to ACOs would slightly decrease to \$40 million in 2022 because, beginning that year, ACOs would no longer have the option of utilizing the Web Interface reporting option, which is projected to be favorable for most ACOs. Then for 2023 when the quality performance standard will increase to the 40<sup>th</sup> percentile across all MIPS Quality performance category scores, assuming the distribution of ACO quality performance scores remains static from the 2019 base data, we project roughly 1-in-5 ACOs could fall below the 40<sup>th</sup> percentile and therefore shared savings payments to ACOs would decrease by approximately \$100 million for that performance year. In total, these estimates sum to roughly a budget neutral outcome across the 3-year performance years covering 2021-2023.

These estimates (and in particular the estimated \$100 million reduction in shared savings payments in 2023) could differ if the universe of MIPS Quality performance category scores improves relative to ACOs' quality performance scores, or alternatively if ACOs, particularly

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

ACOs at risk of failing, respond to the methodology change by boosting their performance, especially by 2023 when the quality performance standard is to be increased from the 30<sup>th</sup> to the 40<sup>th</sup> percentile. Taking into account such possibilities indicates the combined 3-year impact of the changes to the quality performance standard could differ from the budget neutral projection by up to +/- \$200 million. Recognizing the uncertainty regarding these estimates, we will continue to monitor emerging performance to determine the impact of a measured increase to the quality performance standard and may revisit the policy in a future rulemaking in order to promote an attainable standard and degree of improvement based on initial performance under the new methodology.

b. Modifications to the Shared Savings Program Beneficiary Assignment Methodology and Repayment Mechanism Requirements

We do not anticipate a material aggregate impact for the other changes we are finalizing related to the Shared Savings Program, specifically the changes related to repayment mechanism requirements (section III.G.3. of this final rule) and the assignment methodology (section III.G.2. of this final rule); however, the assignment methodology provisions may have differing effects on a subset of participating ACOs, for example by changing the competing ACO to which a beneficiary ultimately is assigned, for a small subset of beneficiaries.

c. Finalization of Shared Savings Program Policies Established in the May 8<sup>th</sup> COVID-19 IFC

As discussed in section III.G.5 of this final rule, in the May 8<sup>th</sup> COVID-19 IFC we modified Shared Savings Program policies including to forgo the 2021 application cycle and allow eligible ACOs to elect a 1-year extension of their agreement period; allow eligible ACOs to temporarily freeze their position along the BASIC track's glide path for PY 2021; and adjust certain program calculations to remove Parts A and B expenditures for episodes of care for treatment of COVID-19; and expand the definition of primary care services used in determining

beneficiary assignment to include telehealth codes for virtual check-ins, e-visits, and telephonic communication. We also clarified the applicability of the program's extreme and uncontrollable circumstances policy to mitigate shared losses for the period of the PHE for COVID-19, beginning in January 2020 and for duration of the PHE for COVID-19. We are finalizing the Shared Savings Program's May 8<sup>th</sup> COVID-19 IFC provisions through this final rule with the following modifications. As discussed in section III.G.5.d. of this final rule, we are revising the regulation at § 425.611(b)(1)(ii) to align the timeframe for identifying discharges for acute care inpatient services for treatment of COVID-19 furnished by non-IPPS providers with the timeframe for the 20 percent adjustment to payments under the IPPS for individuals diagnosed with COVID-19 (which applies to discharges occurring during the PHE for COVID-19), for purposes of identifying episodes of care for treatment of COVID-19. As discussed in section III.G.5.e.(3) of this final rule, we are revising the regulation at § 425.400(c)(2) to specify that the additional primary care service codes will be used in conducting beneficiary assignment when the assignment window (as defined in § 425.20) for a benchmark or performance year includes any month(s) during the PHE for COVID-19 defined in § 400.200. We are also adding a new provision at § 425.400(c)(2)(ii) to specify that we will apply the additional primary care service codes, specified in § 425.400(c)(2)(i) (as renumbered), to all months of the assignment window (as defined in § 425.20), when the assignment window includes any month(s) of the PHE for COVID-19 as defined in § 400.200.

In total, the changes to the Shared Savings Program described in the May 8<sup>th</sup> COVID-19 IFC were estimated to reduce program spending by \$1.43 billion over the 2020 to 2025 period (ranging from a reduction of \$790 million to \$2.12 billion), with most of the reduction (\$1.11 billion) attributable to performance year 2020. We do not anticipate a material aggregate impact from the aforementioned revisions to § 425.611(b)(1)(ii), specified in section III.G.5.d. of this

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

final rule, and § 425.400(c)(2), specified in section III.G.5.e.(3) of this final rule.

#### 8. Modifications to Medicare Shared Savings Program Quality Reporting Requirements for Performance Year 2020 and Finalization of Shared Savings Program Policies Established in the March 31st COVID-19 IFC

As discussed in section III.I.1. of this final rule, we are finalizing our proposal to waive the CAHPS for ACOs reporting requirement for performance year 2020 and will assign automatic full credit to all ACOs for the CAHPS for ACOs survey measures. Based on recent ACO performance on the CAHPS measures, we estimate moving to a 100 percent score for the CAHPS measures will increase the final quality score for the group of all non-new ACOs by roughly 2 percentage points. This would translate to an estimated increase in total shared savings payments to ACOs of approximately \$20 million.

As discussed in section III.I.3. of this final rule, in the March 31st COVID-19 IFC, we modified the extreme and uncontrollable circumstances policy to eliminate the restriction that the policy applies only if the quality reporting period is not extended. We are finalizing this change without modification in this final rule. The total impact of extending the extreme and uncontrollable circumstances policy despite the extension of the quality reporting period for 2019 is estimated to be \$20 million with a range of uncertainty in such estimate spanning \$15 million to \$25 million.

#### 9. Removal of Selected National Coverage Determinations

We proposed to remove nine older NCDs that no longer contain clinically pertinent and current information or that involve items or services that are used infrequently by beneficiaries. We are removing six of the nine proposed. Generally, proactively removing obsolete or unnecessary NCDs removes barriers to innovation and reduces burden for stakeholders and CMS. The NCDs fall into two impact categories. First, eliminating an NCD for items and

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

services that were previously covered means that the item or service will no longer be automatically covered by Medicare. Instead, the coverage determinations for those items and services will be made by Medicare Administrative Contractors (MACs). Second, if the previous NCD barred coverage for an item or service under title XVIII, MACs would now be able to cover the item or service if the MAC determines that such action is appropriate under the statute. We believe that allowing local contractor flexibility in these cases better serves the needs of the Medicare program and its beneficiaries since we believe the future utilization for items and services within these policies will be limited, each affecting less than one percent of the Medicare FFS population.

For the three NCDs that are going from limited coverage to MAC discretion, claims data from 2019 show that less than one percent of the Medicare population are affected. Specifically, CMS provides limited coverage for specific conditions under NCD 20.5, Extracorporeal Immunoabsorption (ECI) using Protein A Columns, where CMS paid 1,918 Medicare FFS claims for 118 beneficiaries for a total expenditure of \$3,757,178.36. Under NCD 100.9, Implantation of Gastroesophageal Reflux Device, CMS received no claims in 2019. CMS provides coverage for FDA approved labeled indications under NCD 110.19, Abarelix, and no claims were submitted in 2019 because the device is no longer marketed. If under MAC discretion, these items and services continue to be covered, we estimate there will be de minimis change to 2021 expenditures, compared to 2019. However, we note that MAC discretion may result in the MACs determining that in particular instances of these items and services, a noncoverage decision may be appropriate for the patient, which could result in a decrease in 2021 expenditures, compared to 2019. The three NCDs that we are not removing in this final rule, were also in this limited coverage category explained above. The current NCDs will continue to apply and we estimate there will be little significant difference in expenditures from

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

2019 to 2021. NCD 110.14, Apheresis (Therapeutic Pheresis), CMS paid 84,539 Medicare FFS claims for 10,641 beneficiaries for a total expenditure of \$77,486,916.37. Under NCD 190.1, Histocompatibility Testing, CMS paid 4,986 Medicare FFS claims for 2,525 beneficiaries for a total expenditure of \$206,085.04. For NCD 190.3, Cytogenetic Studies, CMS paid 163,522 Medicare FFS claims for 145,212 beneficiaries for a total expenditure of \$18,997,807.17.

For the three non-coverage NCDs we are removing, we would not expect to find historical claims data. We broadly noncover both Electrosleep Therapy (NCD 30.4) and Magnetic Resonance Imaging (NCD 220.2.1) for all indications. We noncover FDG PET (NCD 220.6.16) for three specific conditions. Because these NCDs provide for noncoverage, we do not have accurate claims data to estimate total impact. However, based on the diagnoses and services, we expect future claims to affect less than one percent of Medicare FFS beneficiaries. Furthermore, removing a national noncoverage NCD may reduce burden for stakeholders and CMS. It may also remove barriers to innovations and increase patient access to technologies that may now be beneficial for some uses.

#### 10. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug under a Prescription Drug Plan or an MA-PD Plan

This provision does not have any cost to stakeholders other than what is reflected in the Collection of Information section of this final rule, including cost to Medicare. We expect this to be a one-time burden estimate of 994,500 hours ( $165,750 * 6 \text{ hr}$ ) at a cost of \$36,418,590 ( $994,500 \text{ hr} * 36.62$ ) to prescribers.

We received public comments about the impacts of this policy. The following is a summary of the comments we received and our responses.

Comment: Several commenters noted the health care provider costs involved in implementing EPCS. One commenter recommended that CMS work with ONC to ensure that the

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

cost of acquiring the electronic prescribing standard is part of the EHR certification criteria and to ensure that EHR developers cannot charge additional fees for building in this prescribing standard. Accordingly, the commenter requested that HHS take steps to minimize the cost of EPCS requirements to physician practices. Another commenter stated that their practice has delayed implementing EPCS due to the need to upgrade their EHR software, which has proven to be costly. The commenter stated that given the pandemic impact that amount is now unaffordable for their small primary care practice. Another commenter acknowledged that EPCS implementation costs can be high but that a prudent buyer of software support can find less expensive options.

Response: We share concerns about high health care provider costs associated with implementing EPCS, particularly during the PHE. An article in the Journal of the American Medical Association states that physicians in small private practices around the country have reported steep declines in revenues. Declining revenues have been so significant that some of practices have turned to GoFundMe.<sup>152</sup> However, neither ONC nor CMS have the authority to reduce EHR vendor charges for upgrades. We encourage those who provide software solutions to support EPCS make their products as accessible as possible and, as prescribers who do not implement the standard until 2022 will still be considered compliant, software providers will have more time to review their costs and for providers time to evaluate and chose among available options.

We have reflected these costs in our burden estimate in the Collection of Information section of this rule.

#### 11. Medicare Part B Drug Payment for Drugs Approved through the Pathway Established under

## Section 505(b)(2) of the Food, Drug, and Cosmetic Act

As discussed in section III.L. of this final rule, we are not finalizing the section 505(b)(2) drug product proposals or the proposed corresponding regulation text changes for 2021. Thus, there are no impacts for CY 2021.

## 12. Updates to Certified Electronic Health Record Technology due to the 21st Century Cures Act

In section III.M. of this final rule, we are updating the definitions of CEHRT for the Promoting Interoperability Programs and for the MIPS Promoting Interoperability performance category. We are finalizing that health care providers may use technology certified to either the existing or updated 2015 Edition certification criteria, with the extended compliance date of December 31, 2022, as described in timelines finalized in the 21<sup>st</sup> Century Cures Act final rule (85 FR 25670) and the ONC interim final rule (85 FR 70064). After that time, when ONC only allows certification under the 2015 Edition Cures Update, health care providers must use only technology certified to the 2015 Edition Cures Update. Additionally, in section III.M.3.b, we are also implementing flexibility such that participants in the Hospital IQR Program may use either the 2015 Edition certification criteria, or the 2015 Edition Cures update for CEHRT beginning in the CY 2020 reporting period/FY 2022 payment determination.

With the final policies, eligible hospitals and clinicians, and eligible clinicians will be required to update their EHR technology to meet the CEHRT definition under the 2015 Edition Cures Update. It is important to note that the regulatory impacts of the ONC 21<sup>st</sup> Century Cures Act final rule account for the quantified and unquantified costs and benefits to hospitals and clinicians associated with acquiring technology certified to the 2015 Edition Cures Update (85 FR 25905 through 25938). Specifically, ONC based their analysis regarding the number of hospitals, CAHs, and eligible clinicians that would be impacted by their regulatory action on the number of hospitals, CAHs, and eligible professionals that have historically participated in the

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

CMS EHR Incentive Programs (now called the Promoting Interoperability Programs and the MIPS Promoting Interoperability performance category) (85 FR 25908). Because we expect that the eligibility criteria proposed under this rule will be a subset of those who participated in the EHR Incentive Programs (for example, the MIPS program has eligibility criteria for low-volume that the EHR Incentive program did not have), this regulatory impact analysis assumes that the cost to program participants to acquire the upgraded technology has been accounted for under the ONC 21<sup>st</sup> Century Cures Act final rule. However, we acknowledged ambiguity in attributing impacts from the ONC 21<sup>st</sup> Century Cures Act final rule and this policy and requested comment that would help with identification of effects that are dependent on these new regulatory provisions. (We further noted that if the ambiguity is ultimately resolved such that all the costs are attributed to the ONC 21<sup>st</sup> Century Cures Act final rule, leaving no costs associated with this final rule's certified EHR provisions, then these provisions would also yield no benefits.) We did not receive comments on the additional effects of these regulatory provisions and therefore finalize that there is not additional burden or benefit beyond what is captured in the ONC 21<sup>st</sup> Century Cures act final rule.

### 13. Proposal to Establish New Code Categories

In section III.N. of this final rule, we maintain the existing 4 Level II HCPCS codes (J0572 through and including J0575), to identify the current array of buprenorphine/naloxone products available on the U.S. market. The number of codes available for health care providers and coders to identify and report on claims remains constant, and therefore no additional burden is placed on coders or health care providers.

### 14. Medicare Diabetes Prevention Program Expanded Model Emergency Policy

#### a. Effects on Beneficiaries

In section III.O. of this final rule, we are finalizing certain Medicare Diabetes Prevention

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

Program (MDPP) expanded model policies to allow CMS to remove the once per life time benefit for some MDPP beneficiaries, increase the number of virtual sessions, allow MDPP suppliers to start new cohorts, and allow certain MDPP suppliers to deliver time-limited virtual MDPP sessions in the event of extreme and uncontrollable circumstances that would adversely affect access to MDPP services. These changes would apply during the PHE for COVID-19 and any future 1135 waiver event, in the emergency area during the emergency period, as defined under section 1135 (g) of the Act, when the Secretary has authorized waivers under section 1135 for such emergency area and period and CMS has determined that the 1135 waiver event may disrupt in-person MDPP services.

Throughout the rulemaking for the MDPP expanded model, we sought to ensure that the set of MDPP services would be delivered in-person, in a classroom-based setting, within an established interval timeline. At the time, the priority was placed on establishing a structured service that, when delivered within the confines of the rule, would create the least risk of fraud and abuse, increase the likelihood of success, and maintain the integrity of the data collected for evaluation purposes. However, circumstances such as the PHE for COVID-19 have led CMS to make changes to the MDPP expanded model, and to implement an Emergency Policy for MDPP that allows for temporary flexibilities and that prioritizes availability and continuity of services for MDPP suppliers and MDPP beneficiaries impacted by section 1135 waiver events.

In the March 31<sup>st</sup> COVID-19 IFC, we sought to ensure that the set of MDPP services that had already started when the PHE for COVID-19 began could continue given the guidance from CDC that Medicare age beneficiaries stay home. The priority was to allow for temporary flexibilities that prioritize availability and continuity of services for MDPP suppliers and MDPP beneficiaries impacted by the PHE for COVID-19. Given the extended duration of the PHE for COVID-19, we are finalizing the regulations in the March 31<sup>st</sup> COVID-19 IFC, amend the

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

MDPP expanded model to revise certain MDPP policies during the PHE for COVID-19 and any future 1135 waiver event where such 1135 waiver event may cause a disruption to in-person MDPP services. These temporary flexibilities allow beneficiaries to either continue to have access to set of MDPP services through virtual sessions, pause in-person set of MDPP services and resume with the most recent attendance session of record, or restart MDPP from the beginning in accordance with the March 31<sup>st</sup> COVID-19 IFC (85 FR 19230). Under the current MDPP regulations, as implemented in the IFC, and for future section 1135 events, should MDPP suppliers deliver set of MDPP services virtually and beneficiaries opt to continue with the set of MDPP services virtually during the 1135 waiver event, those beneficiaries are not eligible to restart the set of MDPP services at a later date.

b. Effects on the Market

At this point, we cannot make clear estimates of the true costs of the MDPP Emergency Policy costs given the current Medicare enrollment. For an example, as part of the COVID-19 flexibilities, we are using authority under section 1135 of the Act to waive the supplier enrollment application fee for any applications submitted on or after March 1, 2020 in response to COVID-19. This, along with CDC's promotion of the temporary application fee waiver to its DPRP registered organizations, have led to an increase in MDPP supplier enrollment applications and approved suppliers. Currently, more than 266 organizations nationally are enrolled as MDPP suppliers, representing 966 locations across the US and its territories.

For the current PHE for COVID-19, we anticipated in the March 31<sup>st</sup> COVID-19 IFC that of the 1,818 beneficiaries identified through our monitoring data and the CDC's Diabetes Prevention Recognition Program (DPRP) data, 1,358 beneficiaries may be impacted by allowing both the once-per-lifetime benefit and the minimum weight loss requirement to be waived for those beneficiaries in the first 12 months of MDPP. Of those, we assumed that roughly half of

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

the beneficiaries will want to restart their set of MDPP services after the PHE for COVID-19 ends, with a \$279,748 cost impact of our waiving the once-per-lifetime benefit as part of the COVID-19 flexibilities, assuming that the estimated cost of year 1 of MDPP is \$412.

For this MDPP Emergency Policy, we are updating our assumptions, based on subsequent data from the CDC regarding DPRP organizations' plans for managing their existing cohorts during the PHE for COVID-19, which include either continuing with their cohorts virtually, pausing set of MDPP services and restarting them virtually, or restarting at a later date after the emergency event ends. Based on these data, we assume that 20 percent of MDPP suppliers and 20 percent of beneficiaries will want to restart the set of MDPP services at the first core session after the emergency event ends, taking advantage of the once-per-lifetime requirement removal. We assume that future emergencies will be more geographic-specific, resulting from a natural disaster versus the national-level PHE for COVID-19. For future emergencies, we assume that 2,500 beneficiaries will be enrolled in MDPP in the impacted geographic region. We note that this number is currently an overestimate, and over time, it will likely be an underestimate. We also note that these assumptions are incorrect in cases where a geographic region suffers widespread damage, including to electrical and/or telecommunications systems. This assumption is based on number of suppliers who have reported to the CDC that they are pausing their services during the current PHE for COVID-19. For the current 1135 event, we are assuming 20 percent of 2,500 beneficiaries will want to take advantage of the waiver in 2020. In this scenario, we assume there would be no virtual or physical access to set of MDPP services for some time, and the supplier will need to either pause or restart classes altogether until such infrastructure systems are back in place. We also assume that beneficiaries who opt to continue with the set of MDPP services virtually are within the first 12 months of the MDPP core service period, and will not be eligible to take advantage of the waived once-per-

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

lifetime limit; and beneficiaries who are in year 2 of the set of MDPP services, as demonstrated by the effective date of the first core session, are not eligible to restart MDPP at the beginning. The cost per impacted geographic area of the removal of the once-per-lifetime limit is estimated to be \$209,000. This assumes that MDPP suppliers are paid an estimated \$418 due to beneficiaries reaching the following performance milestones: beneficiary attended 9 sessions, and reached the 5 percent weight loss during interval 2 of the core maintenance session, and attended the required core maintenance sessions.

**TABLE 107: Cost of MDPP Emergency Policy per Geographic Area Impacted by the Emergency**

Recommended Waivers	Cost impact
Adjust the limit to the # Virtual sessions	\$ 0
Remove the once per lifetime requirement	\$ 209
Remove the MDPP services time periods and intervals	\$ 0
Average Y1 MDPP Payments (Y1) with no action	\$ 0
<b>Total cost of MDPP Emergency Policy per PHE</b>	<b>\$ 209</b>

**Units of Measurement** in thousands

**Assumptions:** Estimated MDPP payments in Year 1: \$418, assuming that beneficiaries attended 9 sessions, and reached the 5 percent weight loss during interval 2 of the core maintenance session. For future emergencies we assume that 2,500 beneficiaries in any geographic area will be impacted by a public health emergency, or 500 beneficiaries per geographic area.

#### 15. Changes Due to Updates to the Quality Payment Program

In section IV.A. of this final rule, we included our finalized policies for the Quality Payment Program. In this section of the final rule, we present the overall and incremental impacts to the number of expected QPs and associated APM Incentive Payments. In MIPS, we estimate the total MIPS eligible population and the payment impacts by practice size for the 2021 MIPS performance period based on various finalized policies to modify the MIPS final score and the performance threshold discussed in section IV.A.3.e.(3) of this final rule and additional performance threshold finalized in the CY 2020 PFS final rule (84 FR 63040). For this RIA, we updated performance period and eligibility data to reflect information submitted in the 2019 MIPS performance period.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

a. Estimated APM Incentive Payments to QPs in Advanced APMs and Other Payer Advanced APMs

From 2019 through 2024, through the Medicare Option, eligible clinicians receiving a sufficient portion of Medicare Part B payments for covered professional services or seeing a sufficient number of Medicare patients through Advanced APMs as required to become QPs, for the applicable performance period, will receive a lump-sum APM Incentive Payment equal to 5 percent of their estimated aggregate payment amounts for Medicare covered professional services furnished during the calendar year immediately preceding the payment year. Beginning in payment year 2021, in addition to the Medicare Option, eligible clinicians may become QPs through the All-Payer Combination Option. The All-Payer Combination Option allows eligible clinicians to become QPs by meeting the QP payment amount or patient count threshold through a pair of calculations that assess a combination of both Medicare Part B covered professional services furnished through Advanced APMs and services furnished through Other Payer Advanced APMs.

The APM Incentive Payment is separate from and in addition to the payments for covered professional services furnished by an eligible clinician during that year. Eligible clinicians who become QPs for a year are not subject to MIPS reporting requirements and payment adjustments. Eligible clinicians who do not become QPs, but meet a lower threshold to become Partial QPs for the year, may elect to report to MIPS and, if they elect to report, would then be scored under MIPS and receive a MIPS payment adjustment. Partial QPs are not eligible to receive the APM Incentive Payment. For the 2021 QP Performance Period, as set forth in § 414.1430(a)(2), Partial QPs are eligible clinicians in Advanced APMs who have at least 50 percent, but less than 75 percent, of their payments for Part B covered professional services through an APM Entity, or furnish Part B covered professional services to at least 35 percent, but less than 50 percent, of

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

their Medicare beneficiaries through an APM Entity. This MIPS payment adjustment may be positive, negative, or neutral. If an eligible clinician does not attain either QP or Partial QP status, and does not meet any another exemption category, the eligible clinician would be subject to MIPS, would report to MIPS, and would receive the corresponding MIPS payment adjustment.

Beginning in payment year 2026, the Conversion Factor (CF) used to calculate payment rates for services furnished by clinicians who achieve QP status for a year would be increased each year by 0.75 percent for the year, while the CF used to calculate payment rates for services furnished by clinicians who do not achieve QP status for the year would be increased by 0.25 percent. In addition, MIPS eligible clinicians would receive positive, neutral, or negative MIPS payment adjustments to payment for their Part B PFS services in a payment year based on performance during a prior performance period. Although the statute establishes overall payment rate and procedure parameters until 2026 and beyond, this impact analysis covers only the fifth payment year (2023 payment year) of the Quality Payment Program.

Overall, we estimate that for the 2021 QP Performance Period between 196,000 and 252,000 eligible clinicians will become QPs, therefore be excluded from MIPS, and qualify for the lump sum APM incentive payment in Payment Year 2023 based on 5 percent of their Part B paid amounts for covered professional services in the preceding year. These paid amounts for QPs are estimated to be between approximately \$14,000 million and \$18,500 million in total for the 2021 performance year. The analysis for this final rule used the 2019 third snapshot participation file. We based APM Incentive Payment Amounts on paid amounts with service dates of January 1, through September 30, 2019. We multiplied the calculated amounts by 1.5 to approximate payment amounts for the full calendar year. We estimate that the total lump sum APM Incentive Payments will be approximately \$700-900 million for the 2023 Quality Payment

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

Program payment year.

In section IV.F.10.b. of this final rule, we projected the number of eligible clinicians that will be QPs, and thus excluded from MIPS, using several sources of information. First, the projections are anchored in the most recently available public information on Advanced APMs. The projections reflect Advanced APMs that will be operating during the 2021 QP Performance Period, as well as some Advanced APMs anticipated to be operational during the 2021 QP Performance Period. The projections also reflect an estimated number of eligible clinicians that would attain QP status through the All-Payer Combination Option. We note that the Next Generation ACO Model, previously scheduled to conclude December 2020, the Comprehensive Care for Joint Replacement Payment Model (CEHRT Track), currently scheduled to conclude March 31, 2021, have been included in our analysis as we anticipate that these models will be Advanced APMs in 2021. The following APMs are expected to be Advanced APMs for the 2021 QP Performance Period:

- Bundled Payments for Care Improvement Advanced Model;
- Comprehensive Care for Joint Replacement Payment Model (CEHRT Track), if

extended;

- Comprehensive Primary Care Plus (CPC+) Model;
- Direct Contracting Model;
- Kidney Care Choices Model;
- Maryland Total Cost of Care Model (Care Redesign Program; Maryland Primary Care

Program);

- Medicare Shared Savings Program (Track 2, Track 3, Basic Track Level E, and the

ENHANCED Track);

- Medicare ACO Track 1+ Model;

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

- Next Generation ACO Model, if extended;
- Oncology Care Model (Two-Sided Risk Arrangements);
- Primary Care First (PCF) Model; and
- Vermont All-Payer ACO Model (Vermont Medicare ACO Initiative).

We used the Participation Lists and Affiliated Practitioner Lists, as applicable, (*see* 81 FR 77444 through 77445 for information on the APM Participant Lists and QP determinations) for the Predictive QP determination file for 2019 to estimate the number of QPs, total Part B paid amounts for covered professional services, and the aggregate total of APM Incentive Payments for the 2021 QP Performance Period. We examined the extent to which Advanced APM participants would meet the QP Thresholds of having at least 75 percent of their Part B covered professional services or at least 50 percent of their Medicare beneficiaries furnished Part B covered professional services through the APM Entity.

b. Impact for the 2022 MIPS Payment Year

In section IV.A.3.d.(2)(a) of this final rule, we finalized the proposal to double the total points available for the complex patient bonus to up to 10 points. We expect this finalized policy to result in the median bonus to increase by 3 points, thus increasing MIPS final scores at the median by 3 points. We do not know the effects of the PHE for COVID-19 and its effect on MIPS performance in 2020, so we did not recreate the analysis and payment distributions with the updated bonus for the 2020 MIPS performance period. We expect the higher MIPS final scores would result in smaller payment adjustments for two reasons. First, we expect reductions to the budget neutral pool due to the higher scores. Second, for clinicians above the performance threshold or additional performance threshold, an increased score would mean more clinicians sharing the budget neutral pool and additional \$500 million for exceptional performance and potentially lowering the scaling factor that is applied to the MIPS payment adjustment and

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

additional payment adjustment.

c. Impact of the PHE for COVID-19 on CY 2019 QPP performance period submissions data

The PHE for COVID-19 overlapped with the CY 2019 submissions period and led us to trigger our automatic extreme and uncontrollable circumstances policy for the entire U.S. for the 2019 MIPS performance period. This policy means that clinicians who did not submit any information to MIPS or for certain performance categories could have the performance category scores reweighted (instead of receiving a performance category score of 0). We also published in the March 31st COVID-19 IFC in which we updated our application-based extreme and uncontrollable circumstances policy to provide more flexibility for clinicians impacted by the PHE for COVID-19. Specifically, we extended the application deadline from December 31, 2019 to April 30, 2020, and also modified the policy at § 414.1380(c)(2)(i)(A)(6) to create an exception for the 2019 performance period/2021 MIPS payment year only, such that if a MIPS eligible clinician demonstrates through an application submitted to CMS that they have been adversely affected by the PHE for the COVID-19 pandemic, but also submits data for the quality, Promoting Interoperability, or improvement activities performance categories, the performance categories for which data are submitted would still be reweighted and the data submission would not effectively void the application for reweighting (85 FR 19278).

As a result of these policies, we needed to assess whether it would be appropriate to use CY 2019 QPP submissions data to assess CY 2021 MIPS performance and whether adjustments would need to be made to the data because clinicians did not submit information. To do so, we examined the distribution of final scores for clinicians who submitted data to MIPS for the CY 2019 performance period, irrespective if they applied for the application-based extreme and uncontrollable circumstances policy we established in the March 31st COVID-19 IFC, and compared the levels of non-engagement in MIPS to the CY 2018 performance period. When we

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

considered whether we should remove clinicians who received reweighting due to our triggering of the automatic extreme and uncontrollable circumstances policy due to the PHE for COVID-19, we found excluding clinicians under this policy led to an increase in the number of clinicians not engaged with MIPS compared to the CY 2021 PFS proposed rule RIA, which uses CY 2018 MIPS submissions data. These clinicians who did not submit data for the CY 2019 submissions period did not have shared characteristics that would warrant adjustment for their missing data. Therefore, we selected to only exclude clinicians who qualified for automatic E&U prior to COVID-19 to be consistent with the RIA methodology in previous years. When we considered clinicians impacted by updates to the application-based COVID-19 extreme and uncontrollable circumstances policy as finalized (85 FR 19278) on the CY 2019 submissions data, we found that including clinicians affected by the application-based extreme and uncontrollable circumstances policy in our CY 2021 PFS final rule RIA model did not lead to a meaningful difference in the distribution scores compared to when we used CY 2018 Quality Payment Program submissions data. Given these findings, we decided to use the CY 2019 submissions data and continued to exclude clinicians who were affected by the automatic extreme and uncontrollable circumstances prior to the PHE for COVID-19 as finalized (82 FR 53895 through 53900).

To avoid overestimating the positive payment adjustments for the 2021 MIPS performance period due to the increased number of MIPS eligible clinicians who are not engaged, we adjusted the paid amount of non-engaged clinicians for the CY 2021 MIPS performance period to equal their proportion of paid amount prior to the PHE for COVID-19. We conducted a sensitivity analysis to examine the expected payment adjustment for the CY 2021 MIPS performance period in the absence of an adjustment to the paid amount. The results from this sensitivity analysis are presented in section VIII.H.15.e.(3) of this final rule.

d. Estimated Number of Clinicians Eligible for MIPS Eligibility for the 2023 MIPS Payment Year

(1) Methodology to Assess MIPS Eligibility

(a) Clinicians Included in the Model Prior to Applying the Low-Volume Threshold Exclusion

To estimate the number of MIPS eligible clinicians for the 2021 MIPS performance period in this final rule, our scoring model used a combination of the first determination period from the 2020 MIPS performance period (from October 1, 2018 to September 30, 2019) and data from the end of calendar year 2019 (from October 1, 2019 to December 31, 2019). The first determination period from the 2020 MIPS performance period eligibility file was selected as it was the most recent eligibility file available. We included 1.6 million clinicians (*see* Table 108) who had PFS claims from October 1, 2018 to December 31, 2019. As discussed in section VIII.H.15.c. of this final rule, we excluded from our analysis individual clinicians who were affected by the automatic extreme and uncontrollable circumstances policy finalized for the 2018 MIPS performance period/2020 MIPS payment year in the CY 2019 PFS final rule (83 FR 59876) prior to the PHE for COVID-19 as we are unable to predict how these clinicians would perform in a year where there was no extreme and uncontrollable event. We also excluded from our analysis submissions from clinicians that are CPC+ practitioners due to data limitations and an inability to model their behavior within the APM Performance Pathway. Finally, we did not exclude submitters with one or more categories identified as being suppressed as a result of bad data for the CY 2019 performance period because we did not receive the list of CY 2019 submissions considered as bad data in time for this final rule.

Clinicians are ineligible for MIPS (and are excluded from MIPS payment adjustment) if they are newly enrolled to Medicare; are QPs; are partial QPs who elect to not participate in MIPS; are not one of the clinician types included in the definition for MIPS eligible clinician; or

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

do not exceed the low-volume threshold as an individual or as a group. Therefore, we excluded these clinicians when calculating the estimate of clinicians eligible for MIPS.

For the estimated MIPS eligible population for the 2023 MIPS payment year, we restricted our analysis to clinicians who are a physician (as defined in section 1861(r) of the Act), a physician assistant, nurse practitioner, and clinical nurse specialist (as such terms are defined in section 1861(aa)(5) of the Act); a certified registered nurse anesthetist (as defined in section 1861(bb)(2) of the Act); a physical therapist, occupational therapist, speech-language pathologist, audiologist, clinical psychologist, and registered dietitian or nutrition professional as finalized in the CY 2019 PFS final rule (83 FR 60076).

As noted previously, we excluded QPs from our scoring model since these clinicians are not MIPS eligible clinicians. To determine which clinicians in the initial population of 1.6 million should be excluded as QPs, we used Advanced APM payment and patient percentages from the APM Participant List for the first snapshot date for the 2020 QP performance period, supplemented by the most recent 2019 performance period APM participation data for those clinicians not on the 2020 first snapshot list. From this data, we calculated the QP determinations as described in the Qualifying APM Participant definition at § 414.1305 for the 2021 QP performance period. We assumed that all Partial QPs would elect to participate in MIPS and included them in our scoring model and eligibility counts. The projected number of QPs excluded from our model is 172,530. Due to data limitations, we could not identify specific clinicians who may become QPs in the 2021 Medicare QP Performance Period; hence, our model may underestimate or overestimate the fraction of clinicians and allowed charges for covered professional services that will remain subject to MIPS after the exclusions.

We also excluded newly enrolled Medicare clinicians from our model. To identify newly enrolled Medicare clinicians, we used the enrollment date from the 2019 Quality Payment

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

Unauthorized disclosure may result in prosecution to the full extent of the law.

Program performance period data.

(b) Assumptions Related to Applying the Low-Volume Threshold Exclusion

The low-volume threshold policy may be applied at the individual (that is, TIN/NPI) or group (that is, TIN) levels based on how data are submitted or at the APM Entity level if the clinician is part of an APM Entity in a MIPS APM (hereafter, a MIPS APM Entity) that elects to submit to MIPS. A clinician or group that exceeds at least one but not all three low-volume threshold criteria may become MIPS eligible by electing to opt-in and subsequently submitting data to MIPS, thereby getting measured on performance and receiving a MIPS payment adjustment. Our method of modeling opt-in participation is described later in this section.

Table 108 presents the estimated MIPS eligibility status and the associated PFS allowed charges of clinicians in the initial population of 1.6 million clinicians in the analysis of the 2021 MIPS performance period after using 2019 MIPS performance period data and applying the finalized policies for the 2021 MIPS performance period.

To apply the low-volume threshold, we need to understand whether clinicians participate as a group, virtual group, APM entity, or as individuals. For the purposes of this regulatory impact analysis, we made assumptions as to which clinicians would elect group reporting, virtual group or APM Entity reporting. One extreme and unlikely assumption is that no practices elect group reporting, virtual group reporting, or participate in an APM Entity that elects MIPS reporting and the low-volume threshold is applied at the individual level. Although we believe a scenario in which clinicians would only participate as individuals is unlikely, this assumption is important because it quantifies the minimum number of MIPS eligible clinicians. For this final rule model, we estimate approximately 228,000 clinicians<sup>153</sup> would be MIPS eligible because

---

<sup>153</sup> The count of 227,488 MIPS eligible clinicians for required eligibility includes those who participated in MIPS (200,373 MIPS eligible clinicians), as well as those who did not participate (27,115 MIPS eligible clinicians).

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

they exceed the low volume threshold as individuals and are not otherwise excluded. In Table 108, we identify these clinicians as having “required eligibility.”

For this RIA, we assume the following participation requirements for virtual groups and MIPS APM Entities that elect to participate in MIPS. We assume that TINs that registered as a virtual group for the CY 2019 MIPS performance period will continue to do so for the CY 2021 MIPS performance period. Due to data limitations and our inability to determine who would use the APM Performance Pathway versus the traditional MIPS submission mechanism for the 2021 MIPS performance period, our model assumes ACO APM Entities would elect to submit data to MIPS through the APM Performance Pathway and that participants in non-ACO APM Entities would participate in MIPS as an individual or group rather than as an APM Entity. We included those who are in MIPS APM ACOs in the 2019 performance period as well as the additional clinicians in the first snapshot date of the 2020 QP performance period.

Finally, we assume that groups that submitted to MIPS as a group will continue to do so for the CY 2021 MIPS performance period. Using CY 2019 MIPS performance period data, we can identify group reporting through the submission of improvement activities, Promoting Interoperability, or quality performance category data. Using these assumptions, we identified approximately 661,000 MIPS eligible clinicians who are eligible because they had the low-volume threshold applied to an identified group, APM entity, or virtual groups. In Table 108, we identify these clinicians who do not meet the low-volume threshold individually but are assumed to submit to MIPS as a group, virtual group or MIPS APM as having “group eligibility.”

To model the opt-in policy finalized in the CY 2019 PFS final rule (83 FR 59735), we updated our methodology from the CY 2021 PFS proposed rule (85 FR 50384 through 50387) because actual opt-in participation data became available with the transition to the use of CY 2019 performance period data. We assumed clinicians who exceeded at least one but not all low-

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

volume threshold criteria and who elected to opt-in to MIPS and submitted data for the CY 2019 MIPS performance period would also elect to opt-in to MIPS for the CY 2021 MIPS performance period.

These clinicians who met this opt-in participation assumption are identified in Table 108 as “Opt-In eligibility”. In this final rule analysis, we estimate an additional 2,300 clinicians would be eligible through this “opt-in” policy for a total MIPS eligible clinician population of approximately 891,000. This leads to an associated \$72 billion allowed PFS charges estimated to be included in the 2021 MIPS performance period.

**TABLE 108: Description of MIPS Eligibility Status for CY 2023 MIPS Payment Year Using the CY 2021 PFS Final Rule Assumptions\*\***

Eligibility Status	CY 2021 PFS Final Rule estimates		
	Predicted Participation Status in MIPS Among Clinicians*	Number of Clinicians	PFS allowed charges (\$ in mil)*
<b>Required eligibility</b> (always subject to a MIPS payment adjustment because individual clinicians exceed the low-volume threshold in all 3 criteria)	Participate in MIPS	200,372	\$48,461
	Do not participate in MIPS	27,115	\$6,345
<b>Group eligibility</b> (only subject to payment adjustment because clinicians' groups exceed low-volume threshold in all 3 criteria and submit as a group)	Submit data as a group	660,909	\$17,061
<b>Opt-In eligibility assumptions</b> (only subject to a positive, neutral, or negative adjustment because the individual or group exceeds the low-volume threshold in at least 1 criterion but not all 3, and they elect to opt-in to MIPS and submit data)	Elect to opt-in and submit data	2,346	\$51
<b>Total Number of MIPS Eligible Clinicians and the associated PFS allowed charges</b>		<b>890,742</b>	<b>\$71,918</b>
<b>Not MIPS Eligible</b>			
<b>Potentially MIPS Eligible</b> (not subject to payment adjustment for non-participation; could be eligible for one of two reasons: (1) meet group eligibility; or (2) opt-in eligibility criteria)	Do not opt-in; or Do not submit as a group	381,771	\$9,979
<b>Below the low-volume threshold</b> (never subject to payment adjustment; both individual and group is below all 3 low-volume threshold criteria)	Not applicable	83,039	\$460
<b>Excluded for other reasons</b> (Non-eligible clinician type, newly enrolled, QP)	Not applicable	269,905	\$10,225
<b>Total Number of Clinicians Not MIPS Eligible</b>		<b>734,715</b>	<b>\$20,664</b>
<b>Total Number of Clinicians (MIPS and Not MIPS Eligible)</b>		<b>1,625,457</b>	<b>\$92,582</b>

\* Estimated MIPS Eligible Clinician Population

\*\* Table 108 does not include clinicians impacted by the automatic extreme and uncontrollable policy prior to PHE for COVID-19 (approximately 5,000 clinicians and \$530 million in PFS allowed charges). It also does not include eligible clinicians in CPC+ APMs who otherwise would have been MIPS eligible.

\*\*\* Allowed charges estimated using 2018 and 2019 dollars. Low-volume threshold is calculated using allowed charges. MIPS payment adjustments are applied to the paid amount.

There are approximately 382,000 clinicians who are not MIPS eligible, but could be if their practice decides to participate or they elect to opt-in. We describe this group as “Potentially  
**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**  
 This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

MIPS eligible”. These clinicians would be included as MIPS eligible in the unlikely scenario in which all group practices elect to submit data as a group and all clinicians that could elect to opt-into MIPS do elect to opt-in. This assumption is important because it quantifies the maximum number of MIPS eligible clinicians. When this unlikely scenario is modeled, we estimate the MIPS eligible clinician population could be as high as 1.3 million clinicians.

Finally, there are some clinicians who would not be MIPS eligible either because they and their group are below the low-volume threshold on all three criteria (approximately 83,000) or because they are excluded for other reasons (approximately 270,000).

Since eligibility among many clinicians is contingent on submission to MIPS as a group, virtual group, APM participation in a MIPS APM Entity that elects to report to MIPS, or election to opt-in, we will not know the number of MIPS eligible clinicians until the submission period for the 2021 MIPS performance period is closed. For this impact analysis, we used the estimated population of 890,742 MIPS eligible clinicians described above.

#### e. Estimated Impacts on Payments to MIPS Eligible Clinicians for the 2023 MIPS Payment Year

##### (1) Summary of Approach

In sections IV.A.3.c., IV.A.3.d. and IV.A.3.e. of this final rule, we present several provisions which impact the measures and activities that impact the performance category scores, final score calculation, and the MIPS payment adjustment. We discuss these changes in more detail in section VIII.H.15.e.(2) of this RIA as we describe our methodology to estimate MIPS payments for the 2023 MIPS payment year. We note that some of the MIPS policies in the CY 2020 PFS final rule were only defined for the 2020 MIPS performance period and 2022 MIPS payment year and did not continue to future years, such as the quality and cost performance category weights. Because we did not have category weights for the 2021 MIPS performance period, we could not calculate a final score for the 2021 MIPS performance period

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

and 2023 MIPS payment year. Therefore, we could not create a baseline for the 2021 performance period that would allow us to fully distinguish between the impact of the previously finalized policies for the 2021 performance period and the finalized policies for the 2021 performance period. Our impact analysis looks at the total effect of the previously finalized and newly finalized MIPS policies on the MIPS final score and payment adjustment for the CY 2021 MIPS performance period/CY 2023 MIPS payment year.

The payment impact for a MIPS eligible clinician is based on the clinician's final score, which is a value determined by their performance (as an individual, group, virtual group, or APM Entity) in the four MIPS performance categories: quality, cost, improvement activities, and Promoting Interoperability. As discussed in section VIII.H.15.e.(2) of this final rule, we generally used the most recently available data from the Quality Payment Program which is data submitted for the 2019 MIPS performance period.

The estimated payment impacts presented in this final rule reflect averages by practice size based on Medicare utilization. The payment impact for a MIPS eligible clinician could vary from the average and would depend on the combination of services that the MIPS eligible clinician furnishes. The average percentage change in total revenues that clinicians earn would be less than the impact displayed here because MIPS eligible clinicians generally furnish services to both Medicare and non-Medicare patients; this program does not impact payment from non-Medicare patients. In addition, MIPS eligible clinicians may receive Medicare revenues for services under other Medicare payment systems, such as the Medicare Federally Qualified Health Center Prospective Payment System, that would not be affected by MIPS payment adjustment factors.

## (2) Methodology to Assess Impact

To estimate participation in MIPS for the CY 2021 Quality Payment Program for this

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

final rule, we generally used 2019 MIPS performance period data. Our scoring model included the 890,742 estimated MIPS eligible clinicians as described in section VIII.H.15.b of this RIA.

To estimate the impact of MIPS policies on MIPS eligible clinicians, we generally used the 2019 MIPS performance period data, including data submitted for the quality, improvement activities, and Promoting Interoperability performance categories. We supplemented this information with CAHPS for MIPS and CAHPS for ACOs, the revised total per capita cost measure and Medicare Spending Per Beneficiary (MSPB) clinician measures that were finalized in the CY 2020 PFS final rule (84 FR 62969 through 62977), and other data sets.<sup>154</sup> We calculated a hypothetical final score for the 2021 MIPS performance period/2023 MIPS payment year for each MIPS eligible clinician using score estimates described in this section for quality, cost, Promoting Interoperability, and improvement activities performance categories.

(a) Methodology to Estimate the Quality Performance Category Score

We estimated the quality performance category score using a similar methodology described in the CY 2020 PFS final rule (84 FR 63168 through 63169) with the following modifications that reflect the newly finalized policies for the 2021 MIPS performance period. As discussed in section IV.A.3.c.(1)(e)(i) of this final rule, we finalized as proposed to replace the All-Cause Readmission measure with the Hospital Wide Readmission measure and add the hip-knee complications measure for those for whom it is applicable. We used testing data for these new administrative claims measures.

As discussed in section IV.A.3.d.(1)(b) of this final rule, we are not finalizing our intent to use a performance period benchmark as opposed to a historical benchmark. Therefore, we

---

<sup>154</sup> Data submitted to MIPS for the 2018 MIPS performance period data was used for the improvement score for the quality performance category. We also incorporated some additional data sources when available to represent more current data.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

used the 2019 MIPS performance period benchmarks because the performance data for this analysis came primarily from the 2019 MIPS performance period. The one exception where we used the 2019 MIPS performance period benchmarks was when we identified measures subject to the topped out scoring cap that was finalized (82 FR 53721 through 53727) using the 2020 MIPS performance period benchmark file. As discussed in section IV.A.3.c.(1) of this final rule, we applied the finalized quality performance category weight of 40 percent for the 2021 MIPS performance period.

Finally, we finalized the APM Performance Pathway policies as described in section IV.A.3.b. of this final rule. The APM Performance Pathway is available for APM entities and as discussed in section IV.A.3.(b).(3).(a) we are finalizing an alternate measure set consisting of the Web Interface measures for the CY 2021 performance period. For our RIA model, we assumed clinicians in APM Entities would continue to use the Web Interface collection type, if available, over the APM Performance Pathway. Due to data limitations, our analysis only applied Web Interface and the APM Performance Pathway scoring policies to ACO APM Entities. For ACOs, quality performance under the finalized APM Performance Pathway was modeled using Web Interface data for 2019 from the 2019 performance period submissions data. For the multiple chronic condition unplanned admissions measure under the APM Performance Pathway, the 2019 Shared Savings Program and the 2018 Next Generation ACO Model public use files were used.<sup>155</sup> To estimate the Hospital Wide Readmission measure as finalized in section IV.A.3.c.(1)(e)(i), we aggregated the score for APM Entities. Data does not exist for APM performance pathway or MIPS quality measures for non-ACO APM Entities. Therefore, we

---

<sup>155</sup> The public use files for the 2019 Medicare Shared Savings Program and 2018 Next Generation ACO Model can be accessed at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/sharedsavingsprogram/program-data> and <https://innovation.cms.gov/innovation-models/next-generation-aco-model>.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

assumed due to data limitations these non-ACO APM entities would not participate in the APP although they can participate in APP, either through the APP measures or Web Interface for the CY 2021 performance period. For the purposes of modeling, we assumed that their participating clinicians (or their groups) would participate in regular MIPS, and scored those clinicians using the available MIPS submissions of the clinician or its group. Therefore, because of data limitations our results may overestimate or underestimate the number of APM Entities that elect to participate in MIPS as an APM Entity and how they elect to participate.

(b) Methodology to Estimate the Cost Performance Category Score

In section IV.A.3.c.(2) of this final rule, we finalized as proposed a cost performance category weight of 20 percent for the 2021 MIPS performance period. We estimated the cost performance category score using the methodology described in the CY 2020 PFS final rule (84 FR 63169)

(c) Methodology to Estimate the Facility-Based Measurement Scoring

As finalized in the CY 2019 PFS final rule (83 FR 59856), we determine the eligible clinician's MIPS cost and quality performance category score in facility-based measurement based on Hospital VBP Program Total Performance Score for eligible clinicians or groups who meet the eligibility criteria, which we designed to identify those who primarily furnish services within a hospital. We estimated the facility-based score using the scoring policies finalized in the CY2018 Quality Payment Program final rule (82 FR 53763) and the methodology described in the CY 2020 PFS final rule (84 FR 63169).

(d) Methodology to Estimate the Promoting Interoperability Performance Category Score

In section IV.3.c.(4)(c)(ii)(B), we are finalizing as proposed to add the HIE bi-directional exchange measure for the 2021 performance period and subsequent years as an optional alternative to the two existing measures: the Support Electronic Referral Loops by Sending

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

Health Information measure and the Support Electronic Referral Loops by Receiving and Incorporating Health Information measure. This provision provides clinicians the option of either reporting the new measure or the two existing measures. In section IV.3.c.(4)(c)(i) of this final rule, we finalized as proposed for the PDMP measure to remain optional and to double the bonus points from 5 to 10 points.

We used the CY 2019 MIPS Promoting Interoperability performance period data submissions data to estimate CY 2021 MIPS performance for the Promoting Interoperability performance category. Due to technical limitations, the data used do not capture the following policy changes between the CY 2019 and CY 2021 performance periods: (1) the doubling of the bonus points for clinicians who submitted the PDMP measure, (2) the removal of the Verify Opioid Treatment Agreement measure data, a measure that was finalized in the CY 2019 performance period (83 FR 59806) but removed in the CY 2020 performance period (84 FR 62994), and (3) the adoption of the finalized Health Information Exchange bi-directional exchange measure for the CY 2021 performance period. As a result, the estimated Promoting Interoperability performance category scores for the CY 2021 performance period may be a slight over- or under-estimate of performance in the Promoting Interoperability performance category.

(e) Methodology to Estimate the Improvement Activities Performance Category Score

We modeled the improvement activities performance category score based on CY 2019 MIPS performance period data and APM participation identified in section VIII.H.15.b of this final rule. We continued to apply the methodology described in the CY 2020 PFS final rule (84 FR 63170) to assign an improvement activities performance category score. For the APM participants identified in section IV.A.3.b.(2) of this final rule, as there was no APM performance pathway score in the previous final rule, we assigned an improvement activity

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

performance category score of 100 percent.

(f) Methodology to Estimate the Complex Patient Bonus

In section IV.A.3.d.(2)(a) of this final rule, we finalized as proposed to continue the complex patient bonus for the 2021 MIPS performance period. Consistent with the policy to define complex patients as those with high medical risk or with dual eligibility, our scoring model used the complex patient bonus information calculated for the 2019 performance period data.

(g) Methodology to Estimate the Final Score

As discussed in sections IV.A.3.c.(1)(b), IV.A.3.c.(2)(a), and summarized in section IV.A.3.d.(2)(b) of this final rule, our model assigned a final score for each TIN/NPI by multiplying each performance category score by the corresponding performance category weight, adding the products together, multiplying the sum by 100 points, and adding the complex patient bonus. After adding any applicable bonus for complex patients, we reset any final scores that exceeded 100 points equal to 100 points. For MIPS eligible clinicians who were assigned a weight of zero percent for any performance category, we redistributed the weights according to section IV.A.3.d.(2)(b)(iii) of this final rule.

(h) Methodology to Estimate the MIPS Payment Adjustment

As described in section IV.A.3.e.(2) of this final rule, we applied the finalized hierarchy to determine which final score should be used for the payment adjustment for each MIPS eligible clinician when more than one final score is available.

We then calculated the parameters of an exchange function in accordance with the statutory requirements related to the linear sliding scale, budget neutrality, minimum and maximum adjustment percentages and additional payment adjustment for exceptional performance (as finalized under § 414.1405), using the performance threshold of 60 points

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

previously finalized in the CY 2020 PFS final rule (84 FR 63037) and the previously finalized additional performance threshold of 85 points (84 FR 63039 through 63040). In the alternatives considered discussed in section VIII.I.2. of this rule, we include the key statistics if the performance threshold was 50 as proposed in the CY 2021 PFS proposed rule (85 FR 50318). We used these resulting parameters to estimate the positive or negative MIPS payment adjustment based on the estimated final score and the paid amount for covered professional services furnished by the MIPS eligible clinician. As discussed in section VIII.H.15.c. of this final rule, we adjusted the paid amount of non-engaged clinicians to equal their proportion of paid amount prior to the PHE for COVID-19.

### (3) Impact of Payments by Practice Size

Using the assumptions provided above, our model estimates that \$458 million would be redistributed through budget neutrality and that \$500 million would be distributed to MIPS eligible clinicians that meet or exceed the additional performance threshold. The mean final score is 79.80 and the median is 85.27.

The model further estimates that the maximum positive payment adjustments are 5.3 percent after considering the MIPS payment adjustment and the additional MIPS payment adjustment for exceptional performance. In the alternatives considered discussed in section VIII.I.2. of this rule, we include the details of the model in which the performance threshold was set to 50, which had been proposed in the 2021 PFS proposed rule. In this alternate model, \$388 million would be redistributed through budget neutrality and the maximum positive payment adjustments would be 4.9 percent.

Table 109 shows the impact of the payment adjustments by practice size and based on whether clinicians are expected to submit data to MIPS. We estimate that a smaller proportion of clinicians in small practices (1-15 clinicians) who participate in MIPS will receive a positive

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

or neutral payment adjustment compared to larger sized practices. Table 109 also shows that 93.0 percent of MIPS eligible clinicians that participate in MIPS are expected to receive positive or neutral payment adjustments. We want to highlight that we are using 2019 MIPS performance period submissions data to simulate a 2021 MIPS performance period final score, and it is likely that there will be changes that we cannot account for at this time, including services and payments disrupted by the PHE for COVID-19 or clinicians changing behavior because of the performance thresholds increased for the 2021 MIPS performance period to avoid a negative payment adjustment. In particular, we have not accounted for potential clinicians who might elect to apply for the extreme and uncontrollable circumstances policies for the CY 2021 performance period that we discuss in section IV.A.3.d.(2)(b)(iv)(B) of this final rule.

The combined impact of negative and positive adjustments and the additional positive adjustments for exceptional performance as a percent of paid amount among those that do not submit data to MIPS was not the maximum negative payment adjustment of 9 percent possible because some MIPS eligible clinicians that do not submit data to MIPS receive a non-zero score for the cost performance category, which utilizes administrative claims data and does not require separate data submission to MIPS. Among those who we estimate would not submit data to MIPS, 85 percent are in small practices (22,956 out of 27,115 clinicians who do not submit data). To address participation concerns, we have policies targeted towards small practices including technical assistance and special scoring policies to minimize burden and facilitate small practice participation in MIPS or APMs, which we describe in section H.15.e.(4)(b)(iv) of this final rule. We intend to continue working with stakeholders to improve engagement in MIPS among clinicians in small practices. It should also be noted that the estimated number of clinicians who do not submit data to MIPS may be an overestimate of non-engagement in MIPS for the CY 2021 MIPS performance period. This is because the PHE for COVID-19 may have resulted in

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

fewer clinicians submitting data to MIPS or more clinicians may elect to apply for the extreme and uncontrollable circumstances policies due to the PHE for COVID-19 for 2021 MIPS performance period. Therefore, engagement levels in MIPS for the CY 2021 MIPS performance period may differ from these reported estimates. We also note this participation data is generally based off participation for the 2019 performance period, which is associated with the 2021 MIPS payment year and had a performance threshold of 30 points, and that participation may change for the 2021 performance period when the performance threshold is 60 points.

**TABLE 109: MIPS Estimated Payment Year 2023 Impact on Total Estimated Paid Amount by Participation Status and Practice Size<sup>a</sup>**

Practice Size*	Number of MIPS eligible clinicians	Percent MIPS Eligible Clinicians with Positive or Neutral Payment Adjustment	Percent MIPS Eligible Clinicians with a Positive Adjustment with Exceptional Payment Adjustment	Percent MIPS Eligible Clinicians with Negative Payment Adjustment	Combined Impact of Negative and Positive Adjustments and Exceptional Performance Payment as Percent of Paid Amount**

NOTE: Results of this model may change significantly if more clinicians apply for the application-based extreme and uncontrollable circumstances policy exception in CY 2021 because of the PHE for COVID-19.

\*Practice size is the total number of TIN/NPIs in a TIN.

\*\* 2019 data used to estimate 2021 performance period payment adjustments. Payments estimated using 2019 dollars trended to 2023. The percentage represents the total adjustments after taking all the positive adjustments and subtracting the negative adjustments for all MIPS eligible clinicians in the same respective practice size.

\*\*\*Includes facility-based clinicians whose quality data is submitted through hospital programs.

As a sensitivity analysis of our COVID-19 adjustment on paid amount, we ran a model that did not adjust the paid amount of non-engaged clinicians to equal their proportion of paid amount prior to the PHE for COVID-19, our model estimates that \$601 million would be

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

redistributed through budget neutrality. The model further estimates that the maximum positive payment adjustments are 5.9 percent after considering the MIPS payment adjustment and the additional MIPS payment adjustment for exceptional performance.

#### (4) Additional Impacts from Outside Payment Adjustments

##### (a) Burden Overall

In addition to the payment adjustments, we are finalizing several policies that have an impact on burden in the CY 2021 and CY 2022 MIPS performance periods. In section VII.B.5 of this final rule, we outline the costs of data collection that includes both policy updates and adjustments due to the use of updated data sources. For each finalized proposal included in this regulation which impacts our estimate of collection burden, the incremental burden for each is summarized in Table 110. We also provide additional burden discussions that we are not able to quantify.

**TABLE 110: Incremental Burden from Associated Finalized Policies**

Burden Description and associated finalized proposals	Burden Hours	Burden Dollars
Total burden associated with continuing the policies and ICRs set forth in the CY 2020 PFS final rule into the 2021 and 2022 MIPS performance periods (as discussed in section VII.B.5.p)	1,478,504	\$ 144,456,084
Burden change due to finalized policy to sunset the CMS Web Interface measures as a collection type/submission type for CY 2022*	-5,926	-\$ 541,507
Burden change due to finalized policy to require QCDRs and qualified registries to conduct targeted data audits, if necessary	730	\$ 67,496
Burden change due to new ICR for Nomination of MVPs	300	\$ 45,467
Burden change due to finalized policy to add a survey-based measure on telehealth to the CAHPS for MIPS Survey	100	\$ 2,565
Burden change due to finalized policy to allow APM Entities to submit an extreme and uncontrollable circumstances exception application	1.75	\$ 162
Burden change due to finalized policy to require nominated improvement activities to be linked to existing and related quality and cost measures, as applicable and feasible	31	\$ 4,698
<b>Total change in burden due to policy</b>	<b>-4,763</b>	<b>-\$ 421,117</b>
<b>Total burden set forth in the CY 2021 PFS final rule</b>	<b>1,473,741</b>	<b>\$ 144,034,968</b>

\* The total change in burden due to this policy includes a decrease in burden due to elimination of the “Quality Data Submission: CMS Web Interface collection type” ICR beginning with the 2022 MIPS performance period and “Group Registration for CMS Web Interface” ICR beginning with the 2022 MIPS performance period as well as an increase in burden for the “Quality Data Submission: MIPS CQM and QCDR collection type” and “Quality Data Submission: eCQM collection type” ICRs beginning with the 2022 MIPS performance period for respondents who

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

previously submitted via the CMS Web Interface submitting data via an alternate collection type. See section VII.B.5. of this final rule.

(b) Additional Impacts to Clinicians

(i) Web Interface

As discussed in section IV.A.3.c.(1)(c) of this final rule, we are finalizing to sunset the CMS Web Interface measures as a collection type for groups and virtual groups with 25 or more eligible clinicians starting with the 2022 performance period. We recognize that the sunset of the CMS Web Interface for groups and virtual groups may be burdensome to current groups and virtual groups submitting quality data on CMS Web Interface measures. Such groups and virtual groups will need to select a different collection type/submission type and redesign their systems to be able to interact with the new collection type/submission type. Given that the Medicare Part B claims collection type is limited to small practices, the alternatives for these groups and virtual groups will be either the MIPS CQM, QCDR or eCQM collection types. Given the size of the affected groups and virtual groups, we believe the majority are likely to already be using a QCDR, qualified registry, or EHR as part of their practice workflow. Of the 3,613 TINs comprised of 25 or more clinicians who submitted MIPS data via a collection type other than the CMS Web Interface, 57 percent reported via the MIPS CQM and QCDR collection type and 43 percent reported via the eCQM collection type. For groups converting from Web Interface, there will be some non-recurring costs associated with modifying clinical and MIPS data reporting workflows to utilize an alternate collection type. For any remaining groups and virtual groups there will also be registry fees paid to a QCDR or qualified registry or the financial expense of purchasing/licensing and deploying an EHR system. Because we are unable to assess either the existing workflows of each individual group and virtual group or the decisions each group and virtual group will make in response to this finalized proposal, we cannot quantify the resulting

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

economic impact. While there may be an initial increase in burden for current groups and virtual groups utilizing the CMS Web Interface measures having to transition to the utilization of a different collection type/submission type, we recognize that we will also be reducing reporting requirements. Groups and virtual groups will no longer have to completely report on all pre-determined CMS Web Interface measures and will be able to select their own measures (at least 6) to report.

Groups and virtual groups account for less than 20 percent of organizations utilizing the CMS Web Interface measures while ACOs participating in the Medicare Shared Savings Program and Next Generation ACO Model account for more than 80 percent. With an 80 percent reduction and a continued decrease interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures, it is not fiscally viable, feasible, or sustainable for MIPS to continue to make available the CMS Web Interface measures as a collection type/submission type. There would be proportionally higher costs associated with the operationalization and maintenance of the CMS Web Interface with a significantly smaller number of groups and virtual groups utilizing the CMS Web Interface. In assessing the utilization of the CMS Web Interface by groups and virtual groups, there has been a substantial decrease in participation each year since the inception of MIPS in the 2017 performance period. From 2017 to 2019, the number of groups eligible to report quality measures via the CMS Web Interface (groups registered to utilize the CMS Web Interface) decreased by approximately 45 percent. Similarly, the number of groups utilizing the CMS Web Interface as a collection type decreased by approximately 40 percent from 2017 to 2019. In our cost analysis, operating and maintaining the CMS Web Interface for significantly smaller number of groups and virtual groups would not be cost-effective. To operate and maintain the CMS Web Interface measures solely for groups and virtual groups, there would be an increase in cost and needed resources

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

under MIPS associated with the items such as the establishment and maintenance of CMS Web Interface benchmarks, assignment and sampling, technical support, and education and outreach; thus, there would be proportionally higher costs associated with the operationalization and maintenance of the CMS Web Interface with a significantly smaller number of groups and virtual groups utilizing the CMS Web Interface measures as a collection type/submission type.

(ii) Administrative Claims Measure

As discussed in section IV.A.3.c.(1)(d), we are finalizing as proposed to add two new administrative claims measures beginning in the 2021 MIPS performance period and for future performance periods. We acknowledge there are administrative burdens and related financial costs associated with each administrative claims measure that clinicians, groups, and organizations may choose to monitor. However, because these costs can vary significantly due to organizational size, number of administrative claims measures being reported, volume of clinicians reporting each measure, and the specific methods employed to improve performance, we are unable to provide an estimate of the financial impact each clinician, group, or organization may experience. In summary, we are acknowledging that while there is no data submission requirements per § 414.1325(a)(2)(i) for administrative claim measures, there may be associated costs for clinicians and group practices to monitor new administrative claim measures; however, we are unable to quantify that impact.

(iii) Modifications to the Improvement Activities Inventory

As discussed in section IV.A.3.c.(3)(b)(iii) of this final rule, we are finalizing the removal of one obsolete improvement activity, modification of two existing improvement activities, and adoption of the COVID-19 improvement activity added via IFC. We refer readers to Appendix 2 of this final rule for further details. We do not believe these finalized changes to the inventory will impact time or financial burden on stakeholders because MIPS eligible clinicians are still

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

required to submit the same number of activities and the per response time for each activity is uniform. We do not expect these finalized changes to the inventory to affect our currently approved information collection burden estimates in terms of neither the number of estimated respondents nor the burden per response. We anticipate that the vast majority of clinicians performing improvement activities, to comply with existing MIPS policies, will continue to perform the same activities under the policies established in this final rule because previously finalized improvement activities continue to apply for the current and future years unless otherwise modified per rulemaking (82 FR 54175). Most of the improvement activities in the Inventory remain unchanged for the 2020 MIPS performance period.

(c) Stakeholders Nominating Improvement Activities

In section IV.A.3.c.(3)(b)(i)(A)(bb) of this final rule, we are finalizing as proposed to make an exception to the established timeframe for nomination of improvement activities, such that during a PHE, stakeholders can nominate improvement activities outside of the established Annual Call for Activities timeframe. While we expect additional nominations may be received as a result of this exception, we do not have any data with which to estimate what the additional number may be but we assume the additional costs associated with nominating new improvement activities are unchanged. Additionally, in section IV.A.3.c.(3)(b)(ii)(B) of this rule, we are finalizing as proposed beginning with the CY 2021 performance period and future years to consider agency-nominated improvement activities. We are unable to estimate the number of improvement activity nominations we will receive, but similar to the per respondent estimate we have provided in section VII.B.5.j. of this final rule, we assume it will require 3 hours at \$55.75/hr for a GS-13 Step 5 to nominate an improvement activity for a total cost of \$167.25 (3 hrs x \$55.75/hr) per activity.

(iv) Impact on Small Practices

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

As described in section VIII.H.15.e.(3) of this final rule RIA, we found 85 percent of clinicians who did not submit data to MIPS were in small practices. However, the estimated number of MIPS eligible clinicians who do not submit data and receive a negative payment adjustment, including those in small practices, may be smaller in the CY 2021 performance period due to the PHE for COVID-19. For example, clinicians in small practices may avoid a negative payment adjustment due to non-engagement if they apply for the application-based extreme and uncontrollable circumstances policy exception for the CY 2021 performance period. Furthermore, CMS is committed to identifying flexibilities and options to help clinicians in small practices participate meaningfully and successfully in MIPS. Specifically, CMS excludes individual MIPS eligible clinicians or groups with less than or equal to \$90,000 in allowed charges for covered professional services under the Medicare PFS, fewer than or equal to 200 Medicare Part B patients who are furnished covered professional services under the Medicare PFS, or fewer than or equal to 200 covered professional services under the Medicare PFS. We continue to give solo practitioners and practices with 10 or fewer clinicians the choice to form a virtual group to participate with other practices. For the quality performance category, we continue to: (1) allow clinicians in small practices to continue submitting quality data for covered professional services at both the individual and group level through the Medicare Part B claims submission type; (2) award small practices 3 points for quality measures that don't meet data completeness requirements; and (3) award 6 bonus points to small practices, as long as one measure is submitted. For the Promoting Interoperability performance category, we continue to allow clinicians to apply to have this category reweighted to zero (if not qualified for automatic reweighting) for: (1) small practices; (2) clinicians with insufficient internet connectivity; (3) clinicians with extreme and uncontrollable circumstances; (4) lack of control over availability of certified EHR technology (CEHRT); and (5) use of decertified EHR technology. For the

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

improvement activities performance category, small practices and those in rural locations and in health professional shortage areas (or HPSAs) have reduced reporting requirements. For small practices or those located in a rural or HPSAs: (1) Medium-weighted activities are worth 20 points of the total category score; and (2) High-weighted activities are worth 40 points of the total category score. Finally, in terms of technical assistance, we launched the Small, Underserved, and Rural Support initiative to provide free, customized technical assistance to clinicians in small practices. This 5-year program was funded by the Medicare Access and CHIP Reauthorization Act (MACRA). The Quality Payment Program technical assistance initiative in 2017 was part of our comprehensive education and outreach effort to help clinicians successfully participate in the Quality Payment Program. Our technical assistance achieved notable success during the first 2 years of the program, including receiving customer satisfaction ratings of 99.8 percent in 2017 and 98.7 percent in 2018. We also recognize that our technical assistance initiative led to a 95 percent participate rate in 2017.

(d) Impact on Third Party Intermediaries

In section IV.A.3.g. of this rule, we finalized as proposed multiple changes to the third party intermediary regulations at § 414.1400. Specifically, we are: (1) amending current requirements for approval of third party intermediaries to take into account past performance and provision of inaccurate information regarding MIPS program requirements to eligible clinicians; (2) requiring attendance by all third party intermediaries for training and support sessions; (3) requiring that QCDRs and qualified registries must conduct an annual data validation audit and if one or more deficiencies or data errors are identified also conduct targeted audits; (4) incrementally increasing requirements for QCDR measure testing and clarify what is meant by full testing; and (5) requiring third party intermediaries to submit a CAP to address identified deficiencies and data issues as well as actions to prevent recurrence.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

With regard to the amendments to current requirements for approval of third party intermediaries, we do not anticipate this to require any additional effort for affected entities as the revision is to allow CMS to utilize already available information to make approval decisions.

The finalized requirement for attendance at training and support sessions and the associated burdens on third parties closely aligns to expectations previously established in the CY 2017 Quality Payment Program final rule (81 FR 77367 through 77374) and (81 FR 77384 through 77386). With regard to survey vendors, we previously finalized the CMS-approved survey vendor approval criteria in § 414.1400(e) as discussed in the CY 2018 PFS final rule (83 FR 59907 through 59908). Among the approval criteria, § 414.1400(e)(3) established the requirement that the entity has successfully completed, and has required its subcontractors to successfully complete, vendor training(s) administered by CMS or its contractors. Therefore, we assume no additional impact for survey vendors as a result of this finalized proposal. We do not have data on the number of health IT vendors that missed training and support sessions, but the most recent data cites 684 health IT developers through program year 2016 of the Medicare EHR Incentive Program<sup>156</sup>. In CY 2019, 16 total training and support sessions were missed by 14 QCDRs and 33 total sessions were missed by 27 qualified registries. Based on historical frequency and duration, we expect future training and support sessions to continue occurring monthly for approximately 2 hours each. For QCDRs and qualified registries, we estimate an impact of 98 hours [(16 sessions by QCDRs + 33 sessions by qualified registries) x 2 hours]. We lack insight into the exact occupation of session attendees, but for estimating purposes we assume a Physician labor rate of \$212.78/hr and estimate a total burden of \$20,852 (\$212.78/hr x 98 hours).

---

<sup>156</sup> <https://dashboard.healthit.gov/quickstats/pages/FIG-Vendors-of-EHRs-to-Participating-Professionals.php>.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

We do not anticipate a significant impact to QCDRs and qualified registries resulting from the finalized proposal to require QCDRs and qualified registries to conduct an annual data validation audit and if one or more deficiencies or data errors are identified also conduct targeted audits. First, we are not revising our burden estimates because the finalized data validation requirements are similar to existing expectations which we have already accounted for the associated burden as stated in the CY 2017 Quality Payment Program final rule (81 FR 77383 through 77384) and the CY 2019 PFS final rule (83 FR 59998 through 59999). Second, we believe that the finalized requirements for conduct of the data validation audits are aligned with methods and procedures which stakeholders currently utilize.

With regard to the proposal to require QCDRs and qualified registries to conduct targeted audits if one or more data errors are identified during data validation audits, we sought comment on the expected frequency of targeted audits and the anticipated scope of effort. We did not receive comments related to the expected frequency of targeted audits and the anticipated scope of the effort. However, we are including burden estimates associated with this finalized requirement in section VII.B.5.c.(2) and (3) of the Collection of Information for this rule. Due to the unknown scope of patient records that may need to be audited, we estimate a range of effort to complete a targeted data audit from a minimum of 5 hours to a maximum of 10 hours at a cost ranging from \$462.30 (\$92.46/hr x 5 hrs) to \$924.60 (\$92.46/hr x 10 hrs) per targeted audit. In the 2019 MIPS performance period, 37 of the 84 qualified registries (44%) and 23 of the 77 QCDRs (30%) that submitted 2019 MIPS quality data were required to complete a targeted audit. Based on the results of the 2020 self-nomination period, 58 QCDRs and 127 qualified registries have been approved for the 2021 MIPS performance period; assuming the same percentages, we estimate a total of 73 QCDRs and qualified registries (58 x 30% + 127 x 44%) will be required to complete targeted audits. Per these assumptions, we estimate the total impact

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

associated with completing targeted audits will range from 365 hours (73 audits x 5 hrs/audit) at a cost of \$33,748 (73 audits x \$462.30/audit) to 730 hours (73 audits x 10 hrs/audit) at a cost of \$67,496 (73 audits x \$924.60/audit).

Because the finalized proposal to incrementally increase requirements for QCDR measure testing is not changing the requirements for fully testing measures, but is instead implementing an incremental approach to achieve previously finalized requirements, we do not anticipate any additional impact as a result of the finalized policy.

As discussed in section VII.B.5.c.(3) of this rule, we estimate the total burden impact associated with the provision to require CAPs to be 30 hours (10 respondents x 3 hr/respondent) at a cost of \$2,774 for all respondents (10 respondents x \$277.38/respondent).

#### f. Assumptions & Limitations

We note several limitations to our estimates of clinicians' MIPS eligibility and participation, negative MIPS payment adjustments, and positive payment adjustments for the 2023 MIPS payment year. Due to the PHE for COVID-19, we are aware that there may be changes in health care delivery and billing patterns that will impact results for the 2023 MIPS payment year that we were not able to model with our historic data sources. The scoring model results presented in this final rule assume that CY 2019 Quality Payment Program data submissions and performance are representative of CY 2021 Quality Payment Program data submissions and performance. The estimated performance for CY 2021 MIPS performance period using CY 2019 Quality Payment Program data may be underestimated because the performance threshold to avoid a negative payment adjustment for the 2019 MIPS performance period/2021 MIPS payment year was significantly lower (30 out of 100 points) than the performance threshold for the 2021 MIPS performance period/2023 MIPS payment year (60 out of 100). We anticipate clinicians may submit more performance categories to meet the higher

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

performance threshold to avoid a negative payment adjustment. Finally, with the PHE for COVID-19 continuing in the 2021 MIPS performance period, we are uncertain of how many clinicians will apply for extreme and uncontrollable circumstances policy and not be required to submit data to MIPS.

In our MIPS eligible clinician assumptions, we assumed that clinicians who elected to opt-in in the CY 2019 Quality Payment Program and submitted data would continue to elect to opt-in in the CY 2020 performance period. It is difficult to predict whether clinicians will elect to opt-in to participate in MIPS with the finalized policies.

There are additional limitations to our estimates: (1) to the extent that there are year-to-year changes in the data submission, volume and mix of services provided by MIPS eligible clinicians, the actual impact on total Medicare revenues will be different from those shown in Table 109; and (2) our cost data does not overlap with CY 2019 so we may not be capturing performance for all clinicians. Due to the limitations described, there is considerable uncertainty around our estimates that is difficult to quantify.

## I. Alternatives Considered

This final rule contains a range of policies, including some provisions related to specific statutory provisions. The preceding preamble provides descriptions of the statutory provisions that are addressed, identifies those policies when discretion has been exercised, presents rationale for our policies and, where relevant, alternatives that were considered. For purposes of the payment impact on PFS services of the policies contained in this final rule, we presented the estimated impact on total allowed charges by specialty.

### 1. Alternatives Considered for the MDPP Expanded Model Emergency Policy

For the MDPP Expanded Model Emergency Policy, no alternatives were considered. If we do not take action it will have an extremely negative impact to MDPP supplier and

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

beneficiaries; which would threaten the success of the entire expanded model; as beneficiaries would become ineligible and not be able to finish the program, MDPP suppliers would not be paid for services rendered, and no new cohorts of set of MDPP services could be started, effectively ending the expanded model test.

## 2. Alternatives Considered for the Quality Payment Program

For purposes of the payment impact on the Quality Payment Program, we view the performance threshold as a critical factor affecting the distribution of payment adjustments. We ran a separate model with a performance threshold of 50 which was previously proposed in the CY 2021 PFS proposed rule (85 FR 50318) as an alternative to the finalized performance threshold of 60. The model with a performance threshold of 50 has the same mean and median final score as our model of finalized policies since the performance threshold does not change the final score. We estimate that \$388 million would be redistributed through budget neutrality. There would be a maximum payment adjustment of 4.9 percent after considering the MIPS payment adjustment and the additional MIPS payment adjustment for exceptional performance. In addition, 4.5 percent of MIPS eligible clinicians would receive a negative payment adjustment among those that submit data.

In addition, we view the cost performance category weight as a critical factor affecting final scores. We ran two separate models with cost performance category weights of 15 and 30, with corresponding quality performance category weights of 45 and 30, respectively (as an alternative to the finalized cost performance category weight of 20 and quality performance category weight of 40) to estimate the impact of keeping the weights consistent with the CY 2020 PFS final rule and a more aggressive increase in the cost performance category weight. The model with a cost performance category weight of 15 has a mean score of 80.21 and a median score of 86.07. The model with a cost performance category weight of 30 has a mean score of

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

78.38 and a median score 83.18. We refer readers to section IV.A.3.c.(2)(a) for additional discussion on the selection of the cost performance category weight.

Finally, we report the findings if Web Interface were removed as a collection type in the CY 2021 performance period. The model with the removal of Web Interface as a collection type has a final score mean of 78.36 and median of 83.05. We estimate that \$459 million would be redistributed through budget neutrality. There would be a maximum payment adjustment of 6.6 percent after considering the MIPS payment adjustment and the additional MIPS payment adjustment for exceptional performance. In addition, 7.2 percent of MIPS eligible clinicians would receive a negative payment adjustment among those that submit data.

### 3. Alternatives Considered for Changes Related to Scopes of Practice

With regard to the proposal concerning supervision of diagnostic tests by certain NPPs, an alternative would be to maintain the status quo. That is, we could maintain the basic rule under § 410.32(b)(1) that allows only physicians as defined under Medicare law to supervise the performance of diagnostic tests. In that case, the pool of practitioners who could supervise diagnostic tests would remain at current levels and certain NPPs would be limited under Medicare from practicing to the full extent allowed by their state license and scope of practice. However, this alternative would fail to address the mandates established in EO 13890.

With regard to the provision to allow a PTA/OTA to furnish maintenance therapy services, an alternative would be maintaining the status quo to require the PT/OT to personally furnish all maintenance therapy services. However, this alternative would not address the mandates established in EO 13890. It would also be inconsistent with our policy in SNF and home health settings when payment for therapy is made under Part A, maintenance therapy can be furnished by a PT/OT or delegated to be performed by a PTA/OTA.

### 4. Alternatives Considered for Refinements to Values for Certain Services to Reflect Revisions

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

to Payment for Office/Outpatient Evaluation and Management (E/M) Visits and Promote Payment Stability during the PHE for COVID-19

As we noted in section II.F. of this final rule, we sought comment on how we might refine the utilization assumptions for HCPCS add on code G2211. In the proposed rule, we assumed that HCPCS add-on code G2211 would be reported with all office/outpatient visits for the specialties listed in the following public use file at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/Downloads/CY2020-PFS-FR-EM-Add-on-Code.zip>.

As we discussed in section II.F. of this final rule, we considered alternative assumptions regarding utilization for HCPCS add-on code G2211. Several commenters suggested that CMS reduce its utilization assumptions to between 10 percent and 25 percent of reported office/outpatient E/M visits and could range as high as 25 percent of reported office/outpatient E/M visits. These commenters cited that it would take time for medical societies to educate their members about appropriate use, ongoing implementation of the office/outpatient E/M visit codes, electronic health records integration, and the persistence of the COVID-19 pandemic in many parts of the country. Thus, one alternative was to assume that HCPCS add-on code G2211 would be reported for 25 percent of office/outpatient E/M visits listed in the public use file. As we noted in section II.F. of this final rule, while we generally agree with commenters that practitioners will not report HCPCS add-on code G2211 with every visit, we disagree that it will be as low as 25 percent of all reported visits.

We also considered an alternative where these specialties would report HCPCS add-on code G2211 with their office/outpatient E/M visits 90 percent of the time. As we noted in section II.F. of this final rule, because we are not implementing any additional policies that restrict the billing of this code, we are assuming that utilization will be 90 percent of

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

office/outpatient E/M visits for these specialties.

#### J. Impact on Beneficiaries

We do not believe these provisions will have a negative impact on beneficiaries given overall PFS budget neutrality.

##### 1. Medicare Diabetes Prevention Program Expanded Model Emergency Policy

This change would have a positive impact on affected MDPP beneficiaries, as it would allow them to maintain eligibility for the program, and request virtual sessions if needed for successful completion of attendance and weight loss milestones. It would also allow them to start set of MDPP services virtually, allowing remote digital technology to capture body weight measurement or self-reported weight measurements from a participant's personal home digital scale. Finally, if continuing with set of MDPP services is not an option for beneficiaries during the PHE for COVID-19, the Emergency Policy allows beneficiaries to restart their set of MDPP services, maximizing beneficiary options and access to MDPP both during the PHE for COVID-19 and after it ends.

##### 2. Quality Payment Program

There are several changes in this rule that would have an effect on beneficiaries. In general, we believe that many of these changes, including those intended to improve accuracy in payment through regular updates to the inputs used to calculate payments under the PFS, would have a positive impact and improve the quality and value of care provided to Medicare beneficiaries. For example, several of the new measures include patient-reported outcomes, which may be used to help patients make more informed decisions about treatment options. Patient-reported outcome measures provide information on a patient's health status from the patient's point of view and may also provide valuable insights on factors such as quality of life, functional status, and overall disease experience, which may not otherwise be available through

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

routine clinical data collection. Patient-reported outcomes are factors frequently of interest to patients when making decisions about treatment.

#### K. Estimating Regulatory Familiarization Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assumed that the total number of unique commenters on this year's proposed rule will be the number of reviewers of this rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is possible that not all commenters reviewed this year's rule in detail, and it is also possible that some reviewers chose not to comment on the rule. For these reasons we thought that the number of commenters would be a fair estimate of the number of reviewers of this rule. We welcomed any comments on the approach in estimating the number of entities which will review this rule.

We also recognized that different types of entities are in many cases affected by mutually exclusive sections of this rule, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rule. We sought comments on this assumption.

Using the wage information from the BLS for medical and health service managers (Code 11-9111), we estimate that the cost of reviewing this rule is \$110.74 per hour, including overhead and fringe benefits [https://www.bls.gov/oes/current/oes\\_nat.htm](https://www.bls.gov/oes/current/oes_nat.htm). Assuming an average reading speed, we estimate that it would take approximately 8.0 hours for the staff to review half of this rule. For each facility that reviews the rule, the estimated cost is \$885.92 (8.0 hours x \$110.74). Therefore, we estimated that the total cost of reviewing this regulation is \$35,637,904 (\$885.92 x 40,227 reviewers on this year's proposed rule).

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

L. Accounting Statement

As required by OMB Circular A-4 (available at <http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf>), in Tables 111 and 112 (Accounting Statements), we have prepared an accounting statement. This estimate includes growth in incurred benefits from CY 2020 to CY 2021 based on the FY 2021 President’s Budget baseline.

**TABLE 111: Accounting Statement: Classification of Estimated Expenditures**

CATEGORY	TRANSFERS
CY 2021 Annualized Monetized Transfers	Estimated increase in expenditures of \$0.0 billion for PFS CF update.
From Whom To Whom?	Federal Government to physicians, other practitioners and providers and suppliers who receive payment under Medicare.

**TABLE 112: Accounting Statement: Classification of Estimated Costs, Transfer, and Savings**

CATEGORY	TRANSFER
CY 2021 Annualized Monetized Transfers of beneficiary cost coinsurance.	\$0.0 billion
From Whom to Whom?	Beneficiaries to Federal Government.

M. Conclusion

The analysis in the previous sections, together with the remainder of this preamble, provided an initial Regulatory Flexibility Analysis. The previous analysis, together with the preceding portion of this preamble, provides an RIA. In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR chapter IV as set forth below:

**PART 400—INTRODUCTION; DEFINITIONS**

1. The authority citation for part 400 continues to read as follows:

**Authority:** 42 U.S.C. 1302 and 1395hh, and 44 U.S.C. Chapter 35.

2. Section 400.200 is amended by revising the definition of “Public Health Emergency” to read as follows:

**§ 400.200 General definitions.**

\* \* \* \* \*

*Public Health Emergency (PHE)* means the Public Health Emergency determined to exist nationwide as of January 27, 2020, by the Secretary pursuant to section 319 of the Public Health Service Act on January 31, 2020, as a result of confirmed cases of COVID–19, including any subsequent renewals.

\* \* \* \* \*

**PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS**

3. The authority citation for part 410 continues to read as follows:

**Authority:** 42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd.

4. Section 410.15 is amended in paragraph (a)--

a. By adding a definition for “A review of any current opioid prescriptions” in alphabetical order;

b. In the definition of “First annual wellness visit providing personalized prevention plan services” by revising paragraph (xi) and adding paragraphs (xii) and (xiii);

c. In the definition of “Subsequent annual wellness visit providing personalized prevention plan services” by revising paragraph (ix) and adding paragraphs (x) and (xi).

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

The additions and revisions read as follows:

**§ 410.15 Annual wellness visits providing Personalized Prevention Plan Services:**

**Conditions for and limitations on coverage.**

(a) \* \* \*

*A review of any current opioid prescriptions* means, with respect to the individual determined to have a current prescription for opioids, all of the following:

- (i) A review of the potential risk factors to the individual for opioid use disorder;
- (ii) An evaluation of the individual’s severity of pain and current treatment plan;
- (iii) The provision of information on non-opioid treatment options; and
- (iv) A referral to a specialist, as appropriate.

\* \* \* \*

*First annual wellness visit providing personalized prevention plan services* \* \*

\*

(xi) Furnishing of a review of any current opioid prescriptions as that term is defined in this section.

(xii) Screening for potential substance use disorders including a review of the individual’s potential risk factors for substance use disorder and referral for treatment as appropriate.

(xiii) Any other element determined appropriate through the national coverage determination process.

\* \* \* \*

*Subsequent annual wellness visit providing personalized prevention plan services* \*

\* \*

(ix) Furnishing of a review of any current opioid prescriptions as that term is defined in

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

this section.

(x) Screening for potential substance use disorders including a review of the individual’s potential risk factors for substance use disorder and referral for treatment as appropriate.

(xi) Any other element determined appropriate through the national coverage determination process.

\* \* \* \* \*

5. Section 410.16 is amended in paragraph (a)—

a. By adding the definition for “A review of any current opioid prescriptions” in alphabetical order;

b. In the definition of “Initial preventive physical examination” by revising paragraphs (6) and (7) and adding paragraphs (8) and (9).

The additions and revisions read as follows:

**§ 410.16 Initial preventive physical examination: Conditions for and limitations on coverage.**

(a) \* \* \*

*A review of any current opioid prescriptions* means, with respect to the individual determined to have a current prescription for opioids, all of the following:

- (i) A review of the potential risk factors to the individual for opioid use disorder;
- (ii) An evaluation of the individual’s severity of pain and current treatment plan;
- (iii) The provision of information on non-opioid treatment options; and
- (iv) A referral to a specialist, as appropriate.

\* \* \* \* \*

*Initial preventive physical examination* \* \* \*

(6) A review of any current opioid prescriptions as defined in this section.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(7) Screening for potential substance use disorders to include a review of the individual’s potential risk factors for substance use disorder and referral for treatment as appropriate.

(8) Education, counseling, and referral, as deemed appropriate by the physician or qualified nonphysician practitioner, based on the results of the review and evaluation services described in this section.

(9) Education, counseling, and referral, including a brief written plan such as a checklist provided to the individual for obtaining an electrocardiogram, as appropriate, and the appropriate screening and other preventive services that are covered as separate Medicare Part B benefits as described in sections 1861(s)(10), (jj), (nn), (oo), (pp), (qq)(1), (rr), (uu), (vv), (xx)(1), (yy), (bbb), and (ddd) of the Act.

\* \* \* \* \*

6. Section 410.32 is amended by--

- a. Revising paragraphs (b)(1) and (b)(2)(iii)(B);
- b. Adding paragraph (b)(2)(ix); and
- c. Revising paragraph (b)(3)(ii).

The revisions and addition read as follows:

**§ 410.32 Diagnostic x-ray tests, diagnostic laboratory tests, and other diagnostic tests:**

**Conditions.**

\* \* \* \* \*

(b) \* \* \*

(1) *Basic rule.* Except as indicated in paragraph (b)(2) of this section, all diagnostic x-ray and other diagnostic tests covered under section 1861(s)(3) of the Act and payable under the physician fee schedule must be furnished under the appropriate level of supervision by a physician as defined in section 1861(r) of the Act or, to the extent that they are authorized to do

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

so under their scope of practice and applicable State law, by a nurse practitioner, clinical nurse specialist, physician assistant, certified registered nurse anesthetist, or a certified nurse-midwife.

Services furnished without the required level of supervision are not reasonable and necessary (see § 411.15(k)(1) of this chapter).

(2) \* \* \*

(iii) \* \* \*

(B) Furnished under the general supervision of a physician or clinical psychologist; or under the general supervision of a nurse practitioner, clinical nurse specialist, physician assistant, certified registered nurse anesthetist or certified nurse-midwife, to the extent they are authorized to perform the tests under their scope of practice and applicable State laws.

\* \* \* \* \*

(ix) Diagnostic tests performed by a physician assistant authorized to perform the tests under their scope of practice and applicable State laws.

(3) \* \* \*

(ii) *Direct supervision* in the office setting means the physician (or other supervising practitioner) must be present in the office suite and immediately available to furnish assistance and direction throughout the performance of the procedure. It does not mean that the physician (or other supervising practitioner) must be present in the room when the procedure is performed. Until the later of the end of the calendar year in which the PHE as defined in § 400.200 of this chapter ends or, December 31, 2021, the presence of the physician (or other practitioner) includes virtual presence through audio/video real-time communications technology (excluding audio-only).

\* \* \* \* \*

7. Section 410.67 is amended--

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

a. In paragraph (b), by revising paragraph (7) and adding paragraph (8) in the definition of “Opioid use disorder treatment service”;

b. By revising paragraph (d)(2)(i)(A); and

c. By adding paragraph (d)(4)(i)(E).

The additions and revision read as follows:

**§ 410.67 Medicare coverage and payment of Opioid use disorder treatment services furnished by Opioid treatment programs.**

\* \* \* \* \*

(b) \* \* \*

*Opioid use disorder treatment service* \* \* \*

(7) Periodic assessment services required under § 8.12(f)(4) of this title, that are furnished during a face-to-face encounter, including services furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements. During the Public Health Emergency, as defined in § 400.200 of this chapter, in cases where a beneficiary does not have access to two-way audio-video communications technology, periodic assessments can be furnished using audio-only telephone calls if all other applicable requirements are met.

(8) Opioid antagonist medications that are approved by the Food and Drug Administration under section 505 of the Federal Food, Drug, and Cosmetic Act for the emergency treatment of known or suspected opioid overdose and overdose education furnished in conjunction with opioid antagonist medication.

\* \* \* \* \*

(d) \* \* \*

(2) \* \* \*

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(i) \* \* \*

(A) *Implantable and injectable medications.* For implantable and injectable medications, the payment is determined using the methodology set forth in section 1847A of the Act, except that the payment amount must be 100 percent of the ASP, if ASP is used; and the payment must be 100 percent of the wholesale acquisition cost (WAC), if WAC is used.

\* \* \* \* \*

(4) \* \* \*

(i) \* \* \*

(E) Take-home supply of opioid antagonist medications that are approved by the Food and Drug Administration under section 505 of the Federal, Food, Drug and Cosmetic Act for the emergency treatment of known or suspected opioid overdose and overdose education furnished in conjunction with opioid antagonist medication, an adjustment will be made when these medications are dispensed. This adjustment will be limited to once every 30 days, except when a further take home supply of these medications is medically reasonable and necessary. The opioid treatment program must document in the medical record the reason(s) for the exception. The amount of the drug component of the adjustment will be determined using the methodology in paragraph (d)(2)(i) of this section. The amount of the non-drug component of the adjustment will be determined based on the CY 2020 Medicare payment rate for CPT code 96161.

\* \* \* \* \*

8. Section 410.78 is amended by revising paragraph (a)(3) and (f) to read as follows:

**§ 410.78 Telehealth services.**

(a) \* \* \*

(3) *Interactive telecommunications system* means multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

interactive communication between the patient and distant site physician or practitioner.

\* \* \* \* \*

(f) *Process for adding or deleting services.* Except as otherwise provided in this paragraph (f), changes to the list of Medicare telehealth services are made through the annual physician fee schedule rulemaking process. During the Public Health Emergency, as defined in § 400.200 of this chapter, we will use a subregulatory process to modify the services included on the Medicare telehealth list during the Public Health Emergency, taking into consideration infection control, patient safety, and other public health concerns resulting from the emergency. CMS maintains the list of services that are Medicare telehealth services under this section, including the current HCPCS codes that describe the services on the CMS website.

9. Section 410.79 is amended by revising paragraphs (c)(3)(i) and (ii) and (e) to read as follows:

**§ 410.79 Medicare Diabetes Prevention Program expanded model: Conditions of coverage.**

\* \* \* \* \*

(c) \* \* \*

(3) \* \* \*

(i) Except as set forth in paragraph (c)(3)(ii) of this section--

(A) The MDPP services period ends upon completion of the core services period described in paragraph (c)(2)(i) of this section, unless the MDPP beneficiary qualifies for the first ongoing maintenance session interval, in accordance with paragraph (c)(1)(ii) of this section.

(B) If the MDPP beneficiary qualifies for the first ongoing maintenance session interval as described in paragraph (c)(1)(ii) of this section, the MDPP services period ends upon completion of that maintenance session interval, unless the MDPP beneficiary qualifies for a

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

subsequent ongoing maintenance session interval, in accordance with paragraph (c)(1)(iii) of this section, in which case the MDPP service period ends upon completion of the last ongoing maintenance session interval for which the beneficiary qualified.

(ii) In the case of an applicable 1135 waiver event as defined in paragraph (e) of this section, the MDPP services period may be suspended and resumed or restarted in accordance with paragraph (e) of this section.

\* \* \* \* \*

(e) *MDPP expanded model emergency policy.* (1) Notwithstanding paragraphs (a) through (d) of this section, the policies described in this paragraph (e) apply during the Public Health Emergency (PHE) as defined in §400.200 of this chapter and during any future 1135 waiver event that CMS determines may disrupts in-person MDPP services (an “applicable 1135 waiver event”). For purposes of this paragraph (e), “1135 waiver event” means an emergency period and emergency area, as such terms are defined in section 1135(g) of the Act, for which the Secretary has authorized one or more waivers under section 1135 of the Act.

(2)(i) CMS determines that an 1135 waiver event may disrupt in-person MDPP services if MDPP suppliers would likely be unable to conduct classes in-person, or MDPP beneficiaries would likely be unable to attend in-person classes, for reasons related to health, safety, or site availability or suitability. Health and safety reasons may include, but are not limited to, the avoidance of transmission of contagious diseases, compliance with laws and regulations during an 1135 waiver event, or the physical safety of MDPP beneficiaries and MDPP coaches, as defined in § 424.205(a) of this chapter, during an 1135 waiver event.

(ii) If CMS determines that an 1135 waiver event may disrupt in-person MDPP services, CMS will communicate such determination for purposes of the policies described in this paragraph (e), to all affected MDPP suppliers.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(3) The following changes apply under this paragraph (e), when CMS has determined that an 1135 waiver event may disrupt in-person MDPP services:

(i) The in-person attendance requirements of paragraphs (c)(1)(ii)(A) and (c)(1)(iii)(A) of this section do not apply.

(ii) MDPP suppliers may start new cohorts during the PHE as defined in §400.200 of this chapter or an applicable 1135 waiver event only if a baseline weight measurement can be obtained as described in paragraph (e)(3)(iii) of this section.

(iii) MDPP suppliers can obtain weight measurements for MDPP beneficiaries for the baseline weight and any weight loss based performance achievement goals in the following manner:

(A) In-person, when the weight measurement can be obtained safely and in compliance with all applicable laws and regulations;

(B) Via digital technology, such as scales that transmit weights securely via wireless or cellular transmission; or

(C) Self-reported weight measurements from the at-home digital scale of the MDPP beneficiary. Self-reported weights must be obtained during live, synchronous online video technology, such as video chatting or video conferencing, wherein the MDPP coach observes the beneficiary weighing themselves and views the weight indicated on the at-home digital scale, a date-stamped photo or video recording of the beneficiary's weight with the beneficiary visible on the scale, or a recording of the beneficiary's weight, with the beneficiary visible on the scale, submitted by the MDPP beneficiary to the MDPP supplier. The photo or video must clearly document the weight of the MDPP beneficiary as it appears on his/her digital scale on the date associated with the billable MDPP session.

(iv) The virtual session limits described in paragraphs (d)(2) and (d)(3)(i) and (ii) of this

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

section do not apply, and MDPP suppliers may provide all MDPP sessions virtually during the PHE as defined in §400.200 of this chapter or applicable 1135 waiver event. If the beneficiary began the MDPP services period virtually, or changed from in-person to virtual services during the PHE as defined in §400.200 of this chapter or applicable 1135 waiver event, he/she may continue to receive the MDPP set of services virtually even after the PHE or 1135 waiver event has concluded, until the end of the beneficiary's MDPP services period, so long as the provision of virtual services complies with all of the following requirements:

(A) The curriculum furnished during the virtual session addresses the same CDC-approved DPP curriculum topic as the regularly scheduled session.

(B) The MDPP supplier furnishes to the MDPP beneficiary a maximum of one virtual make-up session on the same day as a regularly scheduled session.

(C) The MDPP supplier furnishes to the MDPP beneficiary a maximum of one virtual make-up session per week.

(D) Virtual sessions are furnished in a manner consistent with the DPRP standards for virtual sessions.

(E) The MDPP supplier offers virtual sessions only upon an individual MDPP beneficiary's request or agreement to receive services virtually

(F) The MDPP supplier offers to an MDPP beneficiary:

(1) No more than 16 virtual sessions offered weekly during the core session period, months 1 through 6 of the MDPP services period;

(2) No more than 6 virtual sessions offered monthly during the core maintenance session interval periods, months 7 through 12 of the MDPP services period; and

(3) No more than 12 virtual sessions offered monthly during the ongoing maintenance session intervals, months 13 through 24.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(v) MDPP suppliers may suspend the in-person delivery of the set of MDPP services, when necessary due to the applicable 1135 waiver event, and subsequently resume in-person services either upon the end date of the 1135 waiver event emergency period or an effective date specified by CMS. Upon resumption of the set of MDPP services on an in-person basis, the following paragraphs apply:

(A) Beneficiaries who were receiving MDPP services as of March 31, 2020 whose in-person sessions are suspended due to the PHE as defined in §400.200 of this chapter may elect to restart the set of MDPP services at the beginning or resume with the most recent attendance session of record.

(B) Beneficiaries who begin the set of MDPP services on or after January 1, 2021 who are in the first 12 months of the set of MDPP services as of the start of an applicable 1135 waiver event, whose in-person sessions are suspended due to the applicable 1135 waiver event, and who elect not to continue with MDPP services virtually, may elect to restart the set of MDPP services at the beginning or may resume with the most recent attendance session of record.

(C) Beneficiaries who began the set of MDPP services on or after January 1, 2021 who are in the second year of the set of MDPP services as of the start of an applicable 1135 waiver event, whose in-person sessions are suspended due to the applicable 1135 waiver event, and who elect not to continue with MDPP services virtually, may restart the ongoing maintenance session interval in which they were participating at the start of the applicable 1135 waiver event or may resume with the most recent attendance session of record.

(D) Beneficiaries whose in-person sessions are suspended due to the applicable 1135 waiver event who elect to continue with MDPP services virtually, as described in paragraph (e)(2)(i) of this section, are not eligible to restart the set of MDPP services at a later date, but may elect to suspend the virtual set of MDPP services and resume the set of in-person MDPP

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

services with the most recent attendance session of record.

(E) Beneficiaries may make an election as described in paragraph (e)(3)(v)(A), (B), (C), or (D) of this section, as applicable, only one time per applicable 1135 waiver event.

(F) Beneficiary eligibility, as described in paragraph (c)(1)(i) of this section, will not be impacted by any changes to the beneficiary's body mass index (BMI) or reduction in hemoglobin A1c, fasting plasma glucose, or 2-hour plasma glucose test values achieved during the set of MDPP services or any intervening time in which a beneficiary has suspended the set of MDPP services. MDPP suppliers will utilize the following weight measurements as the baseline weight for purposes of determining all weight-loss achievements:

(1) For an MDPP beneficiary who began receiving the set of MDPP services before March 31, 2020, has suspended services during an applicable 1135 waiver event, and then elects to restart the set of MDPP services at the first core session, the MDPP supplier must record a new baseline weight on the date of first core session that restarts the set of MDPP services.

(2) For an MDPP beneficiary who began receiving the set of MDPP services on or after January 1, 2021, has suspended services during an applicable 1135 waiver event, and then resumes the set of MDPP services either at the most recent attendance session of record or restarts the ongoing maintenance session interval in which they were participating at the start of the applicable 1135 waiver event, the MDPP supplier must use the baseline weight recorded at the beneficiary's first core session.

(vi) The minimum weight loss requirements for beneficiary eligibility in the ongoing maintenance session intervals described in paragraphs (c)(1)(ii)(B) and (c)(1)(iii)(B) of this section are waived only for MDPP beneficiaries who were receiving the MDPP set of services prior to January 1, 2021.

## **PART 414--PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES**

### **INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

10. The authority citation for part 414 continues to read as follows:

**Authority:** 42 U.S.C. 1302, 1395hh, and 1395rr(b)(1).

11. Section 414.502 is amended by revising the definitions of “Data collection period” and “Data reporting period” to read as follows:

**§ 414.502 Definitions.**

\* \* \* \* \*

*Data collection period* is the 6 months from January 1 through June 30 during which applicable information is collected and that precedes the data reporting period, except that for the data reporting period of January 1, 2022 through March 31, 2022, the data collection period is January 1, 2019 through June 30, 2019.

*Data reporting period* is the 3-month period, January 1 through March 31, during which a reporting entity reports applicable information to CMS and that follows the preceding data collection period, except that for the data collection period of January 1, 2019 through June 30, 2019, the data reporting period is January 1, 2022 through March 31, 2022.

\* \* \* \* \*

12. Section 414.504 is amended by revising paragraph (a)(1) to read as follows:

**§ 414.504 Data reporting requirements.**

(a) \* \* \*

(1) For CDLTs that are not ADLTs, initially January 1, 2017 and every 3 years beginning January 1, 2022.

\* \* \* \* \*

13. Section 414.507 is amended by revising paragraphs (d) introductory text and (d)(4) and adding paragraph (d)(7) to read as follows:

**§ 414.507 Payment for clinical diagnostic laboratory tests.**

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

\* \* \* \* \*

(d) *Phase-in of payment reductions.* For years 2018 through 2024, the payment rates established under this section for each CDLT that is not a new ADLT or new CDLT, may not be reduced by more than the following amounts for—

\* \* \* \* \*

(4) 2021—0.0 percent of the payment rate established in 2020.

\* \* \* \* \*

(7) 2024—15 percent of the payment rate established in 2023.

\* \* \* \* \*

14. Section 414.1305 is amended—

- a. By revising the definition of “Attestation”;
- b. In the definition of “Certified Electronic Health Record Technology (CEHRT)” by revising paragraphs (1)(ii)(D) and (2)(ii) introductory text;
- c. By revising the definition of “Collection type”;
- d. By removing the definition of “Full TIN APM”;
- e. By revising the definitions of “Low-volume threshold”, “Meaningful EHR user for MIPS”, and “MIPS APM”;
- f. By adding definition for “Physician Compare” in alphabetical order; and
- g. By revising the definitions of “Primary care services”, “Submission type”, and “Submitter type”.

The revisions and addition read as follows:

**§ 414.1305 Definitions.**

\* \* \* \* \*

*Attestation* means a secure mechanism, specified by CMS, with respect to a particular

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

performance period, whereby a MIPS eligible clinician or group may submit the required data for the Promoting Interoperability or the improvement activities performance categories of MIPS in a manner specified by CMS.

\* \* \* \* \*

*Certified Electronic Health Record Technology (CEHRT)* \* \* \*

(1) \* \* \*

(ii) \* \* \*

(D) The certification criteria that are necessary to report on applicable objectives and measures specified for the MIPS Promoting Interoperability performance category, including the applicable measure calculation certification criterion at 45 CFR 170.314(g)(1) or (2) or 45 CFR 170.315(g)(1) or (2) for all certification criteria that support an objective with a percentage-based measure.

\* \* \* \* \*

(2) \* \* \*

(ii) Necessary to report on applicable objectives and measures specified for the MIPS Promoting Interoperability performance category including the following:

\* \* \* \* \*

*Collection type* means a set of quality measures with comparable specifications and data completeness criteria, as applicable, including, but not limited to: electronic clinical quality measures (eCQMs); MIPS Clinical Quality Measures (MIPS CQMs); QCDR measures; Medicare Part B claims measures; for the 2019 through 2023 MIPS payment years, CMS Web Interface measures; the CAHPS for MIPS survey; and administrative claims measures.

\* \* \* \* \*

*Low-volume threshold* means:

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(1) For the 2019 MIPS payment year, the low-volume threshold that applies to an individual eligible clinician, group, or APM Entity group that, during the low-volume threshold determination period described in paragraph (4) of this definition, has Medicare Part B allowed charges less than or equal to \$30,000 or provides care for 100 or fewer Medicare Part B-enrolled individuals.

(2) For the 2020 MIPS payment year, the low-volume threshold that applies to an individual eligible clinician, group, or APM Entity group that, during the low-volume threshold determination period described in paragraph (4) of this definition, has allowed charges for covered professional services less than or equal to \$90,000 or furnishes covered professional services to 200 or fewer Medicare Part B-enrolled individuals.

(3) For the 2021 and 2022 MIPS payment years, the low-volume threshold that applies to an individual eligible clinician, group, or APM Entity group that, during the MIPS determination period, has allowed charges for covered professional services less than or equal to \$90,000, furnishes covered professional services to 200 or fewer Medicare Part B-enrolled individuals, or furnishes 200 or fewer covered professional services to Medicare Part B-enrolled individuals.

(4) For the 2019 and 2020 MIPS payment years, the low-volume threshold determination period is a 24-month assessment period consisting of:

(i) An initial 12-month segment that spans from the last 4 months of the calendar year 2 years prior to the performance period through the first 8 months of the calendar year preceding to the performance period; and

(ii) A second 12-month segment that spans from the last 4 months of the calendar year 1 year prior to the performance period through the first 8 months of the calendar year performance period. An individual eligible clinician, group, or APM Entity group that is identified as not exceeding the low-volume threshold during the initial 12-month segment will continue to be

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

excluded under § 414.1310(b)(1)(iii) for the applicable year regardless of the results of the second 12-month segment analysis. For the 2019 MIPS payment year, each segment of the low-volume threshold determination period includes a 60-day claims run out. For the 2020 MIPS payment year, each segment of the low-volume threshold determination period includes a 30-day claims run out.

(5) Beginning with the 2023 MIPS payment year, the low-volume threshold that applies to an individual eligible clinician, or group that, during the MIPS determination period, has allowed charges for covered professional services less than or equal to \$90,000, furnishes covered professional services to 200 or fewer Medicare Part B-enrolled individuals, or furnishes 200 or fewer covered professional services to Medicare Part B-enrolled individuals.

*Meaningful EHR user for MIPS means* a MIPS eligible clinician who possesses CEHRT, uses the functionality of CEHRT, and reports on applicable objectives and measures specified for the Promoting Interoperability performance category for a performance period in the form and manner specified by CMS, supports information exchange and the prevention of health information blocking, and engages in activities related to supporting providers with the performance of CEHRT.

\* \* \* \* \*

*MIPS APM means:*

(1) For the 2019 through 2022 MIPS payment years, an APM that meets the criteria specified under § 414.1370(b).

(2) Beginning with the 2023 MIPS payment year, an APM that meets the criteria as set forth in § 414.1367(b).

\* \* \* \* \*

*Physician Compare* means the Physician Compare Internet website of the Centers for

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

Medicare & Medicaid Services (or a successor website).

*Primary care services* for purposes of CMS Web Interface and CAHPS for MIPS survey beneficiary assignment means the set of services identified by the following:

(1) CPT codes:

(i) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient); 99304 through 99318 (codes for professional services furnished in a nursing facility, excluding professional services furnished in a SNF for claims identified by place of service (POS) modifier 31); 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit); 99341 through 99350 (codes for evaluation and management services furnished in a patient's home for claims identified by POS modifier 12); 99487, 99489, and 99490 (codes for chronic care management); and 99495 and 99496 (codes for transitional care management services); and

(ii) Beginning with the 2023 MIPS payment year, 99421, 99422, and 99423 (codes for online digital evaluation and management services (e-visit)); 99441, 99442, and 99443 (codes for telephone evaluation and management services); and 96160 and 96161 (codes for administration of health risk assessment).

(2) HCPCS codes:

(i) G0402 (code for the Welcome to Medicare visit); and G0438 and G0439 (codes for the annual wellness visits); and

(ii) Beginning with the 2023 MIPS payment year, G2010 (code for remote evaluation of patient video/images); and G2012 (code for virtual check-in).

\* \* \* \* \*

*Submission type* means the mechanism by which the submitter type submits data to CMS, including, but not limited to:

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

- (1) Direct;
- (2) Log in and upload;
- (3) Log in and attest;
- (4) Medicare Part B claims; and
- (5) For the 2019 through 2023 MIPS payment years, the CMS Web Interface.

*Submitter type* means the MIPS eligible clinician, group, Virtual Group, APM Entity, or third party intermediary acting on behalf of a MIPS eligible clinician, group, Virtual Group, or APM Entity, as applicable, that submits data on measures and activities under MIPS.

\* \* \* \* \*

15. Section 414.1310 is amended by revising paragraphs (b)(1)(iii) and (e)(1) to read as follows:

**§ 414.1310 Applicability.**

\* \* \* \* \*

(b) \* \* \*

(1) \* \* \*

(iii) Does not exceed the low volume threshold.

(A) Beginning with the 2021 MIPS payment year, if an individual eligible clinician or group exceeds at least one, but not all, of the low-volume threshold criteria and elects to participate in MIPS as a MIPS eligible clinician, the individual eligible clinician or group is treated as a MIPS eligible clinician for the applicable MIPS payment year. For such solo practitioners and groups that elect to participate in MIPS as a virtual group (except for APM Entity groups in MIPS APMs), the virtual group election under § 414.1315 constitutes an election under this paragraph (b)(1)(iii)(A) and results in the solo practitioners and groups being treated as MIPS eligible clinicians for the applicable MIPS payment year.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(B) For the 2021 and 2022 MIPS payment years, if an APM Entity group in a MIPS APM exceeds at least one, but not all, of the low-volume threshold criteria and elects to participate in MIPS as a MIPS eligible clinician, the APM Entity group is treated as a MIPS eligible clinician for the applicable MIPS payment year. For such APM Entity groups in MIPS APMs, only the APM Entity group election can result in the APM Entity group being treated as MIPS eligible clinicians for the applicable MIPS payment year.

\* \* \* \* \*

(e) \* \* \*

(1) Except as provided under §§ 414.1317(b) and 414.1370(f)(2), each MIPS eligible clinician in the group will receive a MIPS payment adjustment factor (or additional MIPS payment adjustment factor) based on the group's combined performance assessment.

\* \* \* \* \*

16. Section 414.1317 is added to read as follows:

**§ 414.1317 APM Entity groups.**

(a) *APM entity group determination.* The APM Entity group will be determined according to the requirements set forth in § 414.1425(b)(1).

(1) In addition to the dates set forth in § 414.1425(b)(1), for purposes of MIPS, the APM Entity group includes an eligible clinician who is on a Participation List on December 31 of the MIPS performance period.

(2) For purposes of MIPS scoring, the APM Entity group will be comprised only of those eligible clinicians within the APM Entity group who are determined to be MIPS eligible at the individual or group level.

(3) For purposes of calculating the APM Entity group score, MIPS scores submitted by virtual groups will not be included.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(b) *APM Entity group scoring.* The MIPS final score calculated for the APM Entity is applied to each MIPS eligible clinician in the APM Entity group. The MIPS payment adjustment is applied at the TIN/NPI level for each of the MIPS eligible clinicians in the APM Entity group.

(1) *Determination of performance category score for each MIPS eligible clinician in an APM Entity.* For APM Entities, where a performance category is not reported by the APM Entity, CMS uses one score for each MIPS eligible clinician in an APM Entity group to derive a single average APM Entity score for the performance category. The applicable score for each MIPS eligible clinician is the higher of either:

(i) A group score based on the measure data for the performance category reported by a TIN for the MIPS eligible clinician according to MIPS submission and reporting requirements for groups.

(ii) An individual score based on the measure data for the performance category reported by the MIPS eligible clinician according to MIPS submission and reporting requirements for individuals.

(iii) In the event that a MIPS eligible clinician in an APM Entity receives an exception from the reporting requirements, such eligible clinician will be assigned a null score when CMS calculates the APM Entity's performance category score.

(2) *Cost scoring for APM Entity groups.* The cost performance category weight is zero percent for APM Entities in MIPS APMs.

(3) *Improvement scoring for APM Entity groups.* For an APM Entity for which CMS calculated a total performance category score for one or more participants in the APM Entity for the preceding MIPS performance period, CMS calculates an improvement score for each performance category for which a previous year's total performance category score is available as specified in § 414.1380(b).

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(4) *Extreme and uncontrollable circumstances.* Beginning with the 2022 MIPS payment year, an APM Entity may submit to CMS an application described at §414.1380(c)(2)(i)(A)(6) and (c)(2)(i)(C)(2) requesting reweighting of all four MIPS performance categories and for all MIPS eligible clinicians in the APM Entity group, based on extreme and uncontrollable circumstances.

(i) An APM Entity must demonstrate in its application to CMS that greater than 75 percent of its participant MIPS eligible clinicians would be eligible for reweighting the Promoting Interoperability performance category for the applicable performance period.

(ii) If CMS approves the request for reweighting based on an APM Entity's application, and if MIPS data are submitted for the APM Entity for the applicable performance period, all four of the MIPS performance categories will be reweighted for the APM Entity group notwithstanding the data submission.

17. Section 414.1320 is amended by revising paragraphs (d) introductory text and (d)(1) and adding paragraph (g) to read as follows:

**§ 414.1320 MIPS performance period.**

\* \* \* \* \*

(d) Beginning with the 2023 MIPS payment year, the performance period for:

(1) The quality and cost performance categories is the full calendar year (January 1 through December 31) that occurs 2 years prior to the applicable MIPS payment year, except as otherwise specified for administrative claims-based measures in the MIPS final list of quality measures described in § 414.1330(a)(1).

\* \* \* \* \*

(g) For purposes of the 2024 MIPS payment year and each subsequent MIPS payment year, the performance period for:

(1) The Promoting Interoperability performance category is a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year.

(2) [Reserved]

18. Section 414.1325 is amended by revising paragraph (c)(1) to read as follows:

**§ 414.1325 Data submission requirements.**

\* \* \* \* \*

(c) \* \* \*

(1) For the quality performance category, the direct; login and upload; Medicare Part B claims (beginning with the 2021 MIPS payment year, for small practices only); and for the 2019 through 2023 MIPS payment years, CMS Web Interface (for groups consisting of 25 or more eligible clinicians or a third party intermediary submitting on behalf of a group) submission types.

\* \* \* \* \*

19. Section 414.1330 is amended by adding paragraphs (b)(4) and (5) to read as follows:

**§ 414.1330 Quality performance category.**

\* \* \* \* \*

(b) \* \* \*

(4) 40 percent of a MIPS eligible clinician’s final score for the MIPS payment year 2023.

(5) 30 percent of a MIPS eligible clinician’s final score for the MIPS payment year 2024 and future years.

20. Section 414.1350 is amended by adding paragraphs (d)(4) and (5) to read as follows:

**§ 414.1350 Cost performance category.**

\* \* \* \* \*

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(d) \* \* \*

(4) 20 percent of the MIPS final score for MIPS payment year 2023.

(5) 30 percent of the MIPS final score for MIPS payment year 2024 and each subsequent MIPS payment year.

21. Section 414.1367 is added to read as follows:

**§ 414.1367 APM performance pathway.**

(a) *General.* Beginning with the 2023 MIPS payment year, the APM Performance Pathway is a MIPS scoring methodology available to MIPS eligible clinicians identified on the Participation List or Affiliated Practitioner List of an APM Entity participating in a MIPS APM.

(b) *Criteria for MIPS APMs.* MIPS APMs are those in which:

(1) APM Entities participate in the APM under an agreement with CMS or through a law or regulation; and

(2) The APM bases payment on quality measures and cost/utilization.

(c) *MIPS performance category scoring in the APM Performance Pathway--(1) Quality.*

Except as provided in paragraphs (c)(1)(i) and (ii) of this section, the quality performance category score is calculated for a MIPS eligible clinician, group, or APM Entity group in accordance with § 414.1380(b)(1) based on the APM Performance Pathway quality measure set established by CMS through rulemaking for a MIPS payment year.

(i) Each submitted measure that does not have a benchmark or meet the case minimum requirement is excluded from the MIPS eligible clinician, group, or APM Entity group's total measure achievement points and total available measure achievement points.

(ii) Any measure that is identified as topped out is not subject to the scoring cap described at § 414.1380(b)(1)(iv).

(2) *Cost.* The cost performance category weight is zero percent for MIPS eligible

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

clinicians who are scored through the APM Performance Pathway.

(3) *Improvement activities*. The improvement activities performance category score is calculated for a MIPS eligible clinician, group, or APM Entity group in accordance with § 414.1380(b)(3) based on the activities required by the MIPS APM that are included in the MIPS final inventory of improvement activities described in § 414.1355(a) (excluding any such activities that the MIPS eligible clinician, group, or APM Entity group does not perform). MIPS eligible clinicians, groups, or APM Entities may report additional improvement activities in accordance with § 414.1360.

(4) *Promoting interoperability*. The promoting interoperability performance category will be scored for the MIPS eligible clinician, group, or APM Entity as described in § 414.1375.

(d) *APM Performance Pathway performance category weights—(1) Performance category weights*. Subject to paragraph (d)(2) of this section, the performance category weights used to calculate the final score for a MIPS eligible clinician, group, or APM Entity reporting through the APM performance Pathway are:

- (i) Quality: 50 percent.
- (ii) Cost: 0 percent.
- (iii) Improvement Activities: 20 percent.
- (iv) Promoting Interoperability: 30 percent.

(2) *Reweighting MIPS performance categories*. If CMS determines, in accordance with § 414.1380(c)(2), that a different scoring weight should be assigned to the quality or promoting interoperability performance category, CMS will redistribute the performance category weights as follows:

(i) If CMS reweights the quality performance category to 0 percent: Promoting Interoperability performance category is reweighted to 75 percent, and Improvement Activities

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

performance category is reweighted to 25 percent.

(ii) If CMS reweights the Promoting Interoperability performance category to 0 percent: Quality performance category is reweighted to 75 percent, and Improvement Activities performance category is reweighted to 25 percent.

(e) *Final score.* The final score is calculated for a MIPS eligible clinician, group, or APM Entity in accordance with § 414.1380(c).

22. Section 414.1370 is amended by revising paragraph (a) to read as follows:

**§ 414.1370. APM scoring standard under MIPS.**

(a) *General.* For the 2019 through 2022 MIPS payment years, the APM scoring standard is the MIPS scoring methodology applicable for MIPS eligible clinicians identified on the Participation List for the performance period of an APM Entity participating in a MIPS APM.

\* \* \* \* \*

23. Section 414.1380 is amended—

- a. By revising paragraph (b)(1)(i) introductory text;
- b. In paragraph (b)(1)(i)(A)(I) by removing “for the 2019 through 2022 MIPS payment years” and adding in its place “for the 2019 through 2023 MIPS payment years”;
- c. By revising paragraphs (b)(1)(iii);
- d. In paragraph (b)(1)(v)(A)(I)(ii) by removing “For the 2019 through 2022 MIPS payment years” and adding in its place “For the 2019 through 2023 MIPS payments years”;
- e. In paragraph (b)(1)(v)(B)(I)(i) by removing “For the 2019 through 2022 MIPS payment years” and adding in its place “For the 2019 through 2023 MIPS payment years”;
- f. In paragraph (b)(1)(vi)(C)(4) by removing “For the 2020 through 2022 MIPS payment years” and adding in its place “For the 2020 through 2023 MIPS payment years”;
- g. By revising paragraph (b)(1)(vii)(A);

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

- h. By removing paragraph (b)(1)(viii);
- i. By revising paragraphs (c)(2)(i)(A)(4) and (5);
- j. By adding paragraphs (c)(2)(ii)(E) and (F);
- k. By revising paragraph (c)(3) introductory text and (c)(3)(iii); and
- l. By adding paragraph (c)(3)(iv).

The revisions and additions read as follows:

**§ 414.1380 Scoring.**

\* \* \* \* \*

(b) \* \* \*

(1) \* \* \*

(i) *Measure achievement points.* For the 2019 through 2023 MIPS payment years, MIPS eligible clinicians receive between 3 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340 and for each administrative claims-based measure that has a benchmark at paragraph (b)(1)(ii) of this section and meets the case minimum requirement at paragraph (b)(1)(iii) of this section. The number of measure achievement points received for each such measure is determined based on the applicable benchmark decile category and the percentile distribution. MIPS eligible clinicians receive zero measure achievement points for each measure required under § 414.1335 on which no data is submitted in accordance with § 414.1325. MIPS eligible clinicians that submit data in accordance with §414.1325 on a greater number of measures than required under § 414.1335 are scored only on the required measures with the greatest number of measure achievement points. Beginning with the 2021 MIPS

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

payment year, MIPS eligible clinicians that submit data in accordance with § 414.1325 on a single measure via multiple collection types are scored only on the data submission with the greatest number of measure achievement points.

\* \* \* \* \*

(iii) *Minimum case requirements.* Except as otherwise specified for administrative claims-based measures in the MIPS final list of quality measures described in § 414.1330(a)(1), the minimum case requirement is 20 cases.

\* \* \* \* \*

(vii) \* \* \*

(A) For each measure that is submitted, if applicable, and impacted by significant changes, performance is based on data for 9 consecutive months of the applicable CY performance period. If such data are not available or may result in patient harm or misleading results, the measure is excluded from a MIPS eligible clinician’s total measure achievement points and total available measure achievement points. For purposes of this paragraph

(b)(1)(vii)(A), “significant changes” means changes to a measure that are outside the control of the clinician and its agents and that CMS determines may result in patient harm or misleading results. Significant changes include, but are not limited to, changes to codes (such as ICD-10, CPT, or HCPCS codes), clinical guidelines, or measure specifications. CMS will publish on the CMS website a list of all measures scored under this paragraph (b)(1)(vii)(A) as soon as technically feasible, but by no later than the beginning of the data submission period at § 414.1325(e)(1).

\* \* \* \* \*

(c) \* \* \*

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(i) \* \* \*

(A) \* \* \*

(4) For the Promoting Interoperability performance category for the 2021, 2022 and 2023 MIPS payment years, the MIPS eligible clinician is a physical therapist, occupational therapist, clinical psychologist, qualified audiologist, qualified speech-language pathologist, or a registered dietitian or nutrition professional. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

(5) For the Promoting Interoperability performance category for the 2019, 2020, 2021, 2022, and 2023 MIPS payment years, the MIPS eligible clinician is a nurse practitioner, physician assistant, clinical nurse specialist, or certified registered nurse anesthetist. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

\* \* \* \* \*

(ii) \* \* \*

(E) For the 2023 MIPS payment year:

Table 6 to Paragraph (c)(2)(ii)(E)

Reweighting scenario	Quality (%)	Cost (%)	Improvement Activities (%)	Promoting Interoperability (%)
<b>No Reweighting Needed:</b>				
Scores for all four performance categories	40%	20%	15%	25%
No Cost	55%	0%	15%	30%
No Promoting Interoperability	65%	20%	15%	0%
No Quality	0%	20%	15%	65%
No Improvement Activities	55%	20%	0%	25%
No Cost and no Promoting Interoperability	85%	0%	15%	0%

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

No Promoting Interoperability and no Quality	0%	50%	50%	0%
No Promoting Interoperability and no Improvement Activities	70%	30%	0%	0%
No Quality and no Improvement Activities	0%	30%	0%	70%

\* \* \* \* \*

(3) *Complex patient bonus.* For the 2020, 2021, 2022, and 2023 MIPS payment years, provided that a MIPS eligible clinician, group, virtual group or APM entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, as follows:

\* \* \* \* \*

(iii) The complex patient bonus cannot exceed 5.0 except as provided in paragraph

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(c)(3)(iv) of this section.

(iv) For the 2022 MIPS payment year, the complex patient bonus is calculated pursuant to paragraphs (c)(3)(i) and (ii) of this section, and the resulting numerical value is then multiplied by 2.0. The complex patient bonus cannot exceed 10.0.

\* \* \* \* \*

24. Section 414.1400 is amended--

- a. By revising paragraphs (a)(2)(i) and (ii) and (a)(4);
- b. By revising paragraph (b) heading and paragraph (b)(2) introductory text;
- c. By adding paragraphs (b)(2)(iv) and (v);
- d. By adding paragraphs (b)(3)(v)(C)(I) and (2);
- e. By revising paragraphs (b)(3)(v)(E) and (b)(3)(vi);
- f. By removing paragraphs (b)(3)(vii)(H) and (L);
- g. By redesignating paragraphs (b)(3)(vii)(I), (J), (K), (M), and (N) as paragraphs (b)(3)(vii)(H), (I), (J), (K), and (L), respectively;
- h. By revising paragraph (c) heading;
- i. By adding paragraphs (c)(2)(iii) and (iv); and
- j. By revising paragraph (f)(1)(i).

The additions and revisions read as follows:

**§ 414.1400 Third party intermediaries.**

(a) \* \* \*

(2) \* \* \*

(i) Except as provided under paragraph (a)(2)(ii) of this section, QCDRs, qualified registries, and Health IT vendors must be able to submit data for all of the following MIPS performance categories:

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(A) Quality, except:

(1) The CAHPS for MIPS survey; and

(2) For qualified registries and Health IT vendors, QCDR measures;

(B) Improvement activities; and

(C) Promoting Interoperability, if the eligible clinician, group, or virtual group is using CEHRT; however, a third party intermediary may be excepted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(4) or (5) or (c)(2)(i)(C)(1) through (7) or (9).

(ii) Health IT vendors that do not support MIPS Value Pathways must be able to submit data for at least one of the MIPS performance categories described in paragraphs (a)(2)(i)(A) through (C) of this section.

\* \* \* \* \*

(4) Third party intermediary approval criteria—

(i) To be approved as a third party intermediary, an entity must agree to meet the applicable requirements of this section, including, but not limited to, the following:

(A) A third party intermediary's principle place of business and retention of any data must be based in the U.S.

(B) If the data is derived from CEHRT, a QCDR, qualified registry, or health IT vendor must be able to indicate its data source.

(C) All data must be submitted in the form and manner specified by CMS.

(D) If the clinician chooses to opt-in in accordance with § 414.1310, the third party intermediary must be able to transmit that decision to CMS.

(E) The third party intermediary must provide services throughout the entire performance period and applicable data submission period.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(F) Prior to discontinuing services to any MIPS eligible clinician, group, or virtual group during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, or virtual group to an alternate third party intermediary, submitter type, or, for any measure on which data has been collected, collection type according to a CMS approved a transition plan.

(ii) The determination of whether to approve an entity as a third party intermediary for a MIPS payment year may take into account:

(A) Whether the entity failed to comply with the requirements of this section for any prior MIPS payment year for which it was approved as third party intermediary; and

(B) Whether the entity provided inaccurate information regarding the requirements of this subpart to any eligible clinician.

(iii) Beginning with the 2023 MIPS payment year, third party intermediaries must attend and complete training and support sessions in the form and manner, and at the times, specified by CMS.

\* \* \* \* \*

(b) *QCDRs.* \* \* \*

(2) *QCDR conditions for approval.* In addition to the other requirements in this section, the criteria for an entity to be approved as a QCDR include the following:

\* \* \* \* \*

(iv) Beginning with the 2023 payment year, the QCDR must conduct annual data validation audits in accordance with this paragraph (b)(2)(iv).

(A) The QCDR must conduct data validation for the payment year prior to submitting any data for that payment year to CMS for purposes of the MIPS program.

(B) The QCDR must conduct data validation on data for each performance category for

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

which it will submit data, including if applicable the Quality, Improvement Activities, and Promoting Interoperability performance categories.

(C) The QCDR must conduct data validation on data for each submitter type for which it will submit data, including if applicable MIPS eligible clinicians, groups, virtual groups, voluntary participants, and opt-in participants.

(D) The QCDR must use clinical documentation (provided by the clinicians they are submitting data for) to validate that the action or outcome measured actually occurred or was performed.

(E) The QCDR shall conduct each data validation audit using a sampling methodology that meets the following requirements:

(1) Uses a sample size of at least 3 percent of the TIN/NPIs for which the QCDR will submit data to CMS, except that if a 3 percent sample size would result in fewer than 10 TIN/NPIs, the QCDR must use a sample size of at least 10 TIN/NPIs, and if a 3 percent sample size would result in more than 50 TIN/NPIs, the QCDR may use a sample size of 50 TIN/NPIs.

(2) Uses a sample that includes at least 25 percent of the patients of each TIN/NPI in the sample, except that the sample for each TIN/NPI must include a minimum of 5 patients and does not need to include more than 50 patients.

(F) Each QCDR data validation audit must include the following:

(1) Verification of the eligibility status of each eligible clinician, group, virtual group, opt-in participant, and voluntary participant.

(2) Verification of the accuracy of TINs and NPIs.

(3) Calculation of reporting and performance rates.

(4) Verification that only the MIPS quality measures and QCDR measures, as applicable, that are relevant to the performance period will be used for MIPS submission.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(G) In a form and manner and by a deadline specified by CMS, the QCDR must report the results of each data validation audit, including the overall data deficiencies or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by any deficiency or error, and, how and when each deficiency or data error type was corrected.

(v) Beginning with the 2023 MIPS payment year, the QCDR must conduct targeted audits in accordance with this this paragraph (b)(2)(v).

(A) If a data validation audit under paragraph (b)(2)(iv) of this section identifies one or more deficiency or data error, the QCDR must conduct a targeted audit into the impact and root cause of each such deficiency or data error for that MIPS payment year.

(B) The QCDR must conduct any required targeted audits for the MIPS payment year and correct any deficiencies or data errors identified through such audit prior to the submission of data for that MIPS payment year.

(C) The QCDR must conduct the targeted audit using the sampling methodology that meets the requirements described in paragraph (b)(2)(iv)(E) of this section. The sample for the targeted audit must not include data from the sample used for the data validation audit in which the deficiency or data error was identified.

(D) In a form and manner and by a deadline specified by CMS, the QCDR must report the results of each targeted audit, including the overall deficiency or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by each deficiency or data error, and how and when each deficiency or data error type was corrected.

(3) \* \* \*

(v) \* \* \*

(C) \* \* \*

(I) To be approved for the 2024 MIPS payment year, a QCDR measure must be face

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

valid. To be approved for the 2025 MIPS payment year and future years, a QCDR measure must be face valid for the initial MIPS payment year for which it is approved and fully tested for any subsequent MIPS payment year for which it is approved.

(2) To be included in an MIPS Value Pathway for the 2024 MIPS payment year and future years, a QCDR measure must be fully tested.

\* \* \* \* \*

(E) Beginning with the 2022 MIPS payment year, CMS may provisionally approve the individual QCDR measures for 1 year with the condition that QCDRs address certain areas of duplication with other approved QCDR measures or MIPS quality measures in order to be considered for the program in subsequent years. If such areas of duplication are not addressed, CMS may reject the duplicative QCDR measure.

(vi) Beginning with the 2023 MIPS payment year, QCDR measures may be approved for 2 years, at CMS discretion by attaining approval status by meeting QCDR measure considerations and requirements. Upon annual review, CMS may revoke a QCDR measure’s second year approval, if the QCDR measure is found to be: Topped out; duplicative of a more robust measure; reflects an outdated clinical guideline; or if the QCDR self-nominating the QCDR measure is no longer in good standing.

\* \* \* \* \*

(c) *Qualified registries.* \* \* \*

(2) \* \* \*

(iii) Beginning with the 2023 payment year, the qualified registry must conduct annual data validation audits in accordance with this paragraph (c)(2)(iii).

(A) The qualified registry must conduct their data validation audits prior to submitting any data to CMS for purposes of the MIPS program.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(B) The qualified registry must conduct data validation on data for each performance category for which it will submit data, including if applicable the Quality, Improvement Activities, and Promoting Interoperability performance categories.

(C) The qualified registry must conduct data validation on data for each submitter type for which it will submit data, including if applicable MIPS eligible clinicians, groups, virtual groups, voluntary participants, and opt-in participants.

(D) The qualified registry must use clinical documentation (provided by the clinicians they are submitting data for) to validate that the action or outcome measured actually occurred or was performed.

(E) The qualified registry shall conduct each data validation audit using a sampling methodology that meets the following:

(1) Uses a sample size of at least 3 percent of the TIN/NPIs for which the qualified registry will submit data to CMS, except that if a 3 percent sample size would result in fewer than 10 TIN/NPIs, the qualified registry must use a sample size of at least 10 TIN/NPIs, and if a 3 percent sample size would result in more than 50 TIN/NPIs, the qualified registry may use a sample size of 50 TIN/NPIs.

(2) Uses a sample that includes at least 25 percent of the patients of each TIN/NPI in the sample, except that the sample for each TIN/NPI must include a minimum of 5 patients and does not need to include more than 50 patients.

(F) Each qualified registry data validation audit must include the following:

(1) Verification of the eligibility status of each eligible clinician, group, virtual group, opt-in participant, and voluntary participant.

(2) Verification of the accuracy of TINs and NPIs.

(3) Calculation of reporting and performance rates.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(4) Verification that only MIPS quality measures and qualified registry measures that are relevant to the performance period will be utilized for MIPS submission.

(G) In a form and manner and by a deadline specified by CMS, the qualified registry must report data validation results, including the overall deficiency or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by any deficiency or data error, how and when each deficiency or data error type was corrected.

(iv) Beginning with the 2023 MIPS payment year, the qualified registry must conduct targeted audits in accordance with this paragraph (c)(2)(iv).

(A) If a data validation audit under paragraph (c)(2)(iii) of this section identifies one or more deficiency or data error, the qualified registry must conduct a targeted audit into the impact and root cause of each such deficiency or data error for that MIPS payment year.

(B) The qualified registry must conduct any required targeted audits for the MIPS payment year and correct any deficiencies or data errors identified through such audit prior to the submission of data for that MIPS payment year.

(C) The qualified registry must conduct the targeted audit using the sampling methodology that meets the requirements described in paragraphs (c)(2)(iii)(E)(1) and (2) of this section. The sample for the targeted audit must not include data from the sample used for the data validation audit in which the deficiency or data error was identified.

(D) In a form and manner and by a deadline specified by CMS, the qualified registry must report the results of each targeted audit, including the overall deficiency or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by each deficiency or data error, how and when each deficiency or data error type was corrected.

\* \* \* \* \*

(f) \* \* \*

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(1) \* \* \*

(i) Require the third party intermediary to submit a corrective action plan (CAP) by a date specified by CMS. The CAP must address the following issues, unless different or additional information is specified by CMS:

(A) The issues that contributed to the non-compliance.

(B) The impact to individual clinicians, groups, or virtual groups, regardless of whether they are participating in the program because they are MIPS eligible, voluntary participating, or opting in to participating in the MIPS program.

(C) The corrective actions to be implemented by the third party intermediary to ensure that the non-compliance has been resolved and will not recur in the future.

(D) The detailed timeline for achieving compliance with the applicable requirements.

\* \* \* \* \*

25. Section 414.1435 is amended by revising paragraph (c)(1) to read as follows:

**§ 414.1435 Qualifying APM participant determination: Medicare option.**

\* \* \* \* \*

(c) \* \* \*

(1) Attributed beneficiaries are determined from each Advanced APM Entity’s attributed beneficiary lists generated by each Advanced APM’s specific attribution methodology except as set forth in this paragraph (c)(1).

(i) Beneficiaries who have been prospectively attributed to an APM Entity for a QP Performance Period will be excluded from the attribution-eligible beneficiary count for any other APM Entity that is participating in an APM where that beneficiary would be ineligible to be added to the APM Entity’s attributed beneficiary list.

(ii) [Reserved]

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

\* \* \* \* \*

26. Section 414.1450 is amended by revising paragraphs (b)(1) and (c) to read as follows:

**§ 414.1450 APM incentive payment.**

\* \* \* \* \*

(b) \* \* \*

(1) The amount of the APM Incentive Payment is equal to 5 percent of the estimated aggregate payments for covered professional services as defined in section 1848(k)(3)(A) of the Act furnished during the calendar year immediately preceding the payment year. CMS uses the paid amounts on claims for covered professional services to calculate the estimated aggregate payments on which CMS will calculate the APM Incentive Payment.

\* \* \* \* \*

(c) *APM Incentive Payment recipient.* CMS will pay the APM Incentive Payment amount for a payment year to a solvent TIN or TINs associated with the QP identified at a specific step in the following hierarchy. If no TIN or TINs with which the QP has an association can be identified at a step, CMS will move to the next and successive steps listed in paragraphs (c)(1) through (8) of this section until CMS identifies a TIN or TINs with which the QP is associated, and to which CMS will make the APM Incentive Payment.

(1) Any TIN associated with the QP that, during the QP Performance Period, is associated with an APM Entity through which the eligible clinician achieved QP status;

(2) Any TIN associated with the QP that, during the APM Incentive Payment base period, is associated with an APM Entity through which the eligible clinician achieved QP status;

(3) Any TIN associated with the QP that, during the APM Incentive Payment base

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

period, is associated with an APM Entity participating in an Advanced APM through which the eligible clinician had achieved QP status;

(4) Any TIN associated with the QP that, during the APM Incentive Payment base period, participated in an APM Entity in an Advanced APM;

(5) Any TIN associated with the QP that, during the APM Incentive Payment base period, participated with an APM Entity in any track of the APM through which the eligible clinician achieved QP status;

(6) Any TIN associated with the QP that, during the APM Incentive Payment base period, participated with an APM Entity in an APM other than an Advanced APM;

(7) Any TIN associated with the QP that submitted a claim for covered professional services furnished by the QP during the APM Incentive Payment base period, even if such TIN has no relationship to any APM Entity or APM; then

(8) If we have not identified any TIN associated with the QP to which we can make the APM Incentive Payment, we will attempt to contact the QP via a public notice to request their Medicare payment information. The QPs identified in the public notice, or any other eligible clinicians who believe that they are entitled to an APM Incentive Payment must then notify CMS of their claim as directed in the public notice by November 1 of the payment year, or 60 days after CMS announces that initial payments for the year have been made, whichever is later. After that time, any claims by a QP to an APM Incentive Payment will be forfeited for such payment year.

\* \* \* \* \*

27. Section 414.1455 is revised to read as follows:

**§ 414.1455 Limitation on review.**

(a) There is no right to administrative or judicial review under sections 1869, 1878, or

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

otherwise, of the Act of the following:

(1) The determination that an eligible clinician is a QP or Partial QP under § 414.1425.

(2) The determination of the amount of the APM Incentive Payment under § 414.1450, including any estimation as part of such determination.

(b)(1) An eligible clinician or APM Entity may request targeted review of a QP or Partial QP determination only if they believe in good faith that, due to a CMS clerical error, an eligible clinician was omitted from a Participation List.

(2) If CMS determines that there was such a clerical error, if the QP determination for the eligible clinician would have been made at the APM Entity level under § 414.1425(b)(1), CMS will assign to the eligible clinician the most favorable QP status that was determined at the APM Entity level on any snapshot dates for the relevant QP Performance Period on which the eligible clinician participated in the APM Entity.

(3) The process for targeted review is as follows:

(i) An eligible clinician or APM Entity may submit a request for targeted review.

(ii) All requests for targeted review must be submitted during the targeted review request submission period, which is a 60-day period that begins with the publication of MIPS performance feedback as described at §414.1385(a)(2). The targeted review request submission period may be extended as specified by CMS.

(iii) All requests for targeted review must be submitted in accordance with the form and manner specified by CMS.

(iv) A request for targeted review may be denied if the request is duplicative of another request for a targeted review; the request is not submitted during the targeted review request submission period; or the request is outside the scope of targeted review specified in this section.

If the targeted review request is denied, CMS will make no changes to the QP status of the

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

eligible clinician for whom targeted review was requested.

(v) CMS will respond to each timely submitted request for targeted review.

(vi) A request for targeted review may include additional information in support of the request at the time it is submitted. CMS may also request additional information from the requestor. If CMS requests additional information relating to the eligible clinician or the APM Entity group that is the subject of a request for targeted review, responsive information must be provided and received by CMS within 30 days of the request. If CMS does not receive a timely response to a request for additional information, CMS may make a final decision on the targeted review request based on the information available.

(vii) If targeted review requests reveal a pattern of CMS error with impacts that extend beyond the scope of eligible clinicians or APM Entities that submitted such targeted review requests, CMS may adjust the QP status of other affected eligible clinicians as provided in paragraph (b)(2) of this section.

(viii) Decisions on a targeted review request are final, and not subject to any further administrative or judicial review in accordance with paragraph (a) of this section.

**PART 415—SERVICES FURNISHED BY PHYSICIANS IN PROVIDERS,  
SUPERVISING PHYSICIANS IN TEACHING SETTINGS, AND RESIDENTS IN  
CERTAIN SETTINGS**

28. The authority citation for part 415 continues to read as follows:

**Authority:** 42 U.S.C. 1302 and 1395hh.

29. Section 415.172 is amended by revising paragraph (a) introductory text, (a)(2), and (b) to read as follows:

**§ 415.172 Physician fee schedule payment for services of teaching physicians.**

(a) *General rule.* If a resident participates in a service furnished in a teaching setting,

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

physician fee schedule payment is made only if a teaching physician is present during the key portion of any service or procedure for which payment is sought. In residency training sites that are located outside a metropolitan statistical area, physician fee schedule payment may also be made if a teaching physician is present during the key portion of the service, including for Medicare telehealth services, through audio/video real-time communications technology for any service or procedure for which payment is sought. For all teaching settings during the Public Health Emergency, as defined in §400.200 of this chapter, for the COVID-19 pandemic, if a resident participates in a service furnished in a teaching setting, physician fee schedule payment is made if a teaching physician is present during the key portion of the service including for Medicare telehealth services, through audio/video real-time communications technology for any service or procedure for which payment is sought.

\* \* \* \* \*

(2) In the case of evaluation and management services, except as otherwise provided in this paragraph (a)(2), the teaching physician must be present in person during the portion of the service that determines the level of service billed. (However, in the case of evaluation and management services furnished in hospital outpatient departments and certain other ambulatory settings, the requirements of §415.174 apply.)

(i) In residency training sites that are located outside of a metropolitan statistical area, the teaching physician may be present through audio/video real-time communications technology during the portion of the service that determines the level of service billed. (However, in the case of evaluation and management services furnished in hospital outpatient departments and certain other ambulatory settings, the requirements of § 415.174 apply.)

(ii) For all teaching settings during the Public Health Emergency, as defined in § 400.200 of this chapter, for the COVID-19 pandemic, the teaching physician may be present through

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

Unauthorized disclosure may result in prosecution to the full extent of the law.

audio/video real-time communications technology during the portion of the service that determines the level of service billed. (However, in the case of evaluation and management services furnished in hospital outpatient departments and certain other ambulatory settings, the requirements of § 415.174 apply.)

(b) *Documentation.* Except as otherwise provided in this paragraph (b), except for services furnished as set forth in §§ 415.174 (concerning an exception for services furnished in hospital outpatient and certain other ambulatory settings), §§ 415.176 (concerning renal dialysis services), and 415.184 (concerning psychiatric services), the medical records must document that the teaching physician was present at the time the service (including a Medicare telehealth service) is furnished. The presence of the teaching physician during procedures and evaluation and management services may be demonstrated by the notes in the medical records made by the physician or as provided in § 410.20(e) of this chapter.

(1) In residency training sites that are located outside of a metropolitan statistical area only, except for services furnished as set forth in §§ 415.174 (concerning an exception for services furnished in hospital outpatient and certain other ambulatory settings), 415.176 (concerning renal dialysis services), and 415.184 (concerning psychiatric services), the medical records must document whether the teaching physician was physically present or present through audio/video real-time communications technology at the time the service (including a Medicare telehealth service) is furnished. The medical records must contain a notation describing the specific portion(s) of the service for which the teaching physician was present through audio/video real-time communications technology. The presence of the teaching physician during procedures and evaluation and management services may be demonstrated by the notes in the medical records made by the physician or as provided in §410.20(e) of this chapter.

(2) For all teaching settings during the Public Health Emergency, as defined in §400.200

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

of this chapter, for the COVID-19 pandemic, except for services furnished as set forth in §§415.174 (concerning an exception for services furnished in hospital outpatient and certain other ambulatory settings), 415.176 (concerning renal dialysis services), and 415.184 (concerning psychiatric services), the medical records must document whether the teaching physician was physically present or present through audio/video real-time communications technology at the time the service (including a Medicare telehealth service) is furnished. The medical records must contain a notation describing the specific portion(s) of the service for which the teaching physician was present through audio/video real-time communications technology. The presence of the teaching physician during procedures and evaluation and management services may be demonstrated by the notes in the medical records made by the physician or as provided in §410.20(e) of this chapter.

\* \* \* \* \*

30. Section 415.174 is amended by revising paragraph (c) and adding paragraph (d) to read as follows:

**§ 415.174 Exception: Evaluation and management services furnished in certain centers.**

\* \* \* \* \*

(c) For all teaching settings during the Public Health Emergency, as defined in §400.200 of this chapter, for the COVID-19 pandemic, the requirements in paragraph (a)(3) of this section for a teaching physician to direct the care and then to review the services furnished by each resident during or immediately after each visit may be met through audio/video real-time communications technology.

(d) In residency training sites that are located outside of a metropolitan statistical area only, the requirements in paragraph (a)(3) of this section for a teaching physician to direct the care and then to review the services furnished by each resident during or immediately after each

It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

visit may be met through audio/video real-time communications technology.

31. Section 415.180 is revised to read as follows:

**§ 415.180 Teaching setting requirements for the interpretation of diagnostic radiology and other diagnostic tests.**

(a) *General rule.* Physician fee schedule payment is made for the interpretation of diagnostic radiology and other diagnostic tests if the interpretation is performed or reviewed by a physician other than a resident.

(1) In residency training sites that are located outside of a metropolitan statistical area only, physician fee schedule payment may also be made for the interpretation of diagnostic radiology and other diagnostic tests if the interpretation is performed by a resident when the teaching physician is present through audio/video real-time communications technology. The medical records must document the extent of the teaching physician's participation in the interpretation or review of the diagnostic radiology test.

(2) For all teaching settings during the Public Health Emergency, as defined in § 400.200 of this chapter, for the COVID-19 pandemic, physician fee schedule payment may also be made for the interpretation of diagnostic radiology and other diagnostic tests if the interpretation is performed by a resident when the teaching physician is present through audio/video real-time communications technology. The medical records must document the extent of the teaching physician's participation in the interpretation or review of the diagnostic radiology or diagnostic test.

(b) [Reserved]

32. Section 415.184 is revised to read as follows:

**§ 415.184 Psychiatric services.**

(a) Physician fee schedule payment is made for psychiatric services furnished under an

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

approved GME program if the requirements of §§ 415.170 and 415.172 are met, including documentation, except that the requirement for the presence of the teaching physician during the service in which a resident is involved may be met by observation of the service by use of a one-way mirror, video equipment, or similar device.

(b) In residency training sites that are located outside of a metropolitan statistical area, the requirement for the presence of the teaching physician during the service in which a resident is involved may be met through audio/video real-time communications technology. The medical records must document the extent of the teaching physician's participation in the service.

(c) For all teaching settings during the Public Health Emergency, as defined in § 400.200 of this chapter, for the COVID-19 pandemic, the requirement for the presence of the teaching physician during the service in which a resident is involved may also be met through audio/video real-time communications technology. The medical records must document the extent of the teaching physician's participation in the service.

33. Section 415.208 is amended by revising paragraph (b) heading and paragraph (b)(2) introductory text to read as follows:

**§ 415.208 Services of moonlighting residents.**

\* \* \* \* \*

(b) *Services in teaching hospitals.* \* \* \*

(2) Services of residents that are not related to their approved GME programs and are performed in an outpatient department or emergency department of a hospital in which they have their training program are covered as physician services and payable under the physician fee schedule if criteria in paragraphs (b)(2)(i) through (iii) of this section are met. The services of residents that are not related to their approved GME programs and are furnished to inpatients of a hospital in which they have their training program are covered as physician services and payable

under the physician fee schedule if criteria in paragraphs (b)(2)(i) through (iii) of this section are met. The medical record must include documentation to demonstrate in each case that these criteria are satisfied.

\* \* \* \* \*

#### **PART 423—VOLUNTARY MEDICARE PRESCRIPTION DRUG BENEFIT**

34. The authority citation for part 423 continues to read as follows:

**Authority:** 42 U.S.C. 1302, 1306, 1395w-101 through 1395w-152, and 1395hh.

35. Section 423.160 is amended by adding paragraph (a)(5) to read as follows:

##### **§ 423.160 Standards for electronic prescribing.**

(a) \* \* \*

(5) On January 1, 2021, prescribers must, except in circumstances in which the Secretary waives the requirement, conduct all prescribing for all Schedule II, III, IV, and V controlled substances electronically using the applicable standards in paragraph (b) of this section. Compliance actions against those not in compliance with this requirement will commence January 1, 2022.

\* \* \* \* \*

#### **PART 424—CONDITIONS FOR MEDICARE PAYMENT**

36. The authority citation for part 424 continues to read as follows:

**Authority:** 42 U.S.C. 1302 and 1395hh.

37. Section 424.67 is amended by—

a. Revising paragraphs (b)(1) introductory text, (b)(1)(ii), (b)(2) and (3), and (b)(5) introductory text;

b. Redesignating paragraphs (c) through (f) as paragraphs (d) through (g), respectively;

c. Adding new paragraph (c); and

##### **INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

d. Revising newly redesignated paragraph (e)(2)(i).

The revisions and additions read as follows:

**§ 424.67 Enrollment requirements for opioid treatment programs (OTP).**

\* \* \* \* \*

(b) \* \* \*

(1) Fully complete and submit, as applicable, the Form CMS-855A or Form CMS-855B application (or their successor applications) and any applicable supplement or attachment thereto to its applicable Medicare contractor. This includes, but is not limited to, the following:

\* \* \* \* \*

(ii) Certifying via the Form CMS-855A or Form CMS-855B (as applicable) and/or the applicable supplement or attachment thereto that the OTP meets and will continue to meet the specific requirements and standards for enrollment described in paragraphs (b) and (e) of this section.

(2) Comply with the application fee requirements in § 424.514. (This includes OTPs enrolling under the circumstances described in paragraph (c)(2) of this section.)

(3)(i) Except as stated in paragraph (b)(3)(ii) of this section, successfully complete the assigned categorical risk level screening required under, as applicable, § 424.518(b) and (c).

(ii) For currently enrolled OTPs that are changing their OTP enrollment from a Form CMS-855B enrollment to a Form CMS-855A enrollment, or vice versa, successfully complete the limited level of categorical screening under § 424.518(a) if the OTP has already completed, as applicable, the moderate or high level of categorical screening under § 424.518(b) or (c), respectively.

\* \* \* \* \*

(5) Report on the Form CMS-855A or Form CMS-855B (as applicable) and/or any

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

applicable supplement all OTP staff who meet the definition of “managing employee” in § 424.502. Such individuals include, but are not limited to, the following:

\* \* \* \* \*

(c) *Clarification of required enrollment forms.* (1) An OTP may only be enrolled as an OTP via the Form CMS-855A or Form CMS-855B but not both.

(2) If a currently enrolled OTP is changing its OTP enrollment from a Form CMS-855B enrollment to a Form CMS-855A enrollment, or vice versa, the effective date of billing that was established for the OTP’s prior enrollment under §§ 424.520(d) and 424.521(a) is applied to the OTP’s new enrollment.

\* \* \* \* \*

(e) \* \* \* \*

(2) \* \* \* \*

(i) The provider does not have a current, valid certification by SAMHSA as required under paragraph (b)(4)(i) of this section or fails to meet any other applicable requirement or standard in this section, including, but not limited to, the OTP standards in paragraphs (b)(6) and (e)(1) of this section.

\* \* \* \* \*

38. Section 424.518 is amended by redesignating paragraphs (a)(1)(xii) through (xvii) as paragraphs (a)(1)(xiii) through (xviii) and adding a new paragraph (a)(1)(xii) to read as follows:

**§ 424.518 Screening levels for Medicare providers and suppliers.**

\* \* \* \* \*

(a) \* \* \*

(1) \* \* \*

(xii) Opioid treatment programs (if § 424.67(b)(3)(ii) applies).

\* \* \* \* \*

## **PART 425—MEDICARE SHARED SAVINGS PROGRAM**

39. The authority citation for part 425 continues to read as follows:

**Authority:** 42 U.S.C. 1302, 1306, 1395hh, and 1395jjj.

40. Section 425.100 is amended by revising paragraph (b) to read as follows:

### **§ 425.100 General.**

\* \* \* \* \*

(b) An ACO is eligible to receive payments for shared savings under subpart G of this part if all of the following conditions are met:

(1) The ACO meets or exceeds the applicable minimum savings rate established under § 425.604, § 425.605, § 425.606, § 425.609, or § 425.610.

(2) The ACO meets the minimum quality performance standards established under § 425.500 (for performance years or a performance period beginning on or before January 1, 2020), or under the quality performance standard established under § 425.512 (for performance years beginning on or after January 1, 2021).

(3) The ACO otherwise maintains its eligibility to participate in the Shared Savings Program under this part.

\* \* \* \* \*

### **§ 425.112 [Amended]**

41. Section 425.112 is amended in paragraph (b)(2)(i) by removing the reference “§ 425.500” and adding in its place the references “§ 425.500 or § 425.510, as applicable”.

### **§ 425.200 [Amended]**

42. Section 425.200 is amended in paragraph (d) by removing the reference “§ 425.500(c)” and adding in its place the references “§ 425.500(c) or § 425.510, as applicable”.

#### **INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

43. Section 425.204 is amended by—

- a. Revising paragraphs (f)(3)(i) through (iv);
- b. Adding paragraph (f)(3)(v); and
- c. Revising paragraphs (f)(4)(iv), (f)(5), and (f)(6)(ii) introductory text.

The revisions and addition read as follows:

**§ 425.204 Content of the application.**

\* \* \* \* \*

(f) \* \* \*

(3) \* \* \*

(i) An ACO participating in Track 2 must demonstrate the adequacy of its repayment mechanism prior to any change in the terms and type of the repayment mechanism, and at such other times as requested by CMS.

(ii) An ACO entering an agreement period in Levels C, D, or E of the BASIC track or the ENHANCED track must demonstrate the adequacy of its repayment mechanism prior to the start of its agreement period, prior to any change in the terms and type of the repayment mechanism, and at such other times as requested by CMS.

(iii) An ACO entering an agreement period in Level A or Level B of the BASIC track must demonstrate the adequacy of its repayment mechanism prior to the start of any performance year in which it either elects to participate in, or is automatically transitioned to, a two-sided model, Level C, Level D, or Level E of the BASIC track, prior to any change in the terms and type of the repayment mechanism, and at such other times as requested by CMS.

(iv) An ACO that has submitted a request to renew its participation agreement must submit as part of the renewal request documentation demonstrating the adequacy of the repayment mechanism that could be used to repay any shared losses incurred for performance

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

years in the next agreement period. The repayment mechanism applicable to the new agreement period may be the same repayment mechanism currently used by the ACO, provided that the ACO submits documentation establishing that the duration of the existing repayment mechanism has been revised to comply with paragraph (f)(6)(ii) of this section, and the amount of the repayment mechanism complies with paragraph (f)(4) of this section.

(v) As part of its application, a re-entering ACO must submit documentation demonstrating the adequacy of the repayment mechanism that could be used to repay any shared losses incurred for performance years in the next agreement period. The repayment mechanism applicable to the new agreement period may be the same repayment mechanism currently used by the re-entering ACO, provided that the ACO is the same legal entity as an ACO that previously participated in the program, and the ACO submits documentation establishing that the duration of the existing repayment mechanism has been revised to comply with paragraph (f)(6)(ii) of this section and the amount of the repayment mechanism complies with paragraph (f)(4) of this section.

(4) \* \* \*

(iv)(A) In the case of an ACO that has submitted a request to enter a new participation agreement for an agreement period starting on or after January 1, 2022 and is a renewing ACO or a re-entering ACO that is the same legal entity as an ACO that previously participated in the program: If the ACO wishes to use its existing repayment mechanism to establish its ability to repay any shared losses incurred for performance years in the new agreement period, the amount of the repayment mechanism must be equal to at least the amount calculated by CMS in accordance with paragraph (f)(4)(ii) of this section.

(B) Under the following circumstances, an ACO that renewed its participation agreement for an agreement period beginning on July 1, 2019, or January 1, 2020, may elect to decrease the

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

amount of its repayment mechanism.

(1) The ACO elected to continue to use its existing repayment mechanism for the agreement period beginning on July 1, 2019, or January 1, 2020, and the amount of that repayment mechanism was greater than the repayment mechanism amount estimated at the time of renewal application according to paragraph (f)(4)(ii) of this section.

(2) The repayment mechanism amount for performance year 2021, as recalculated pursuant to paragraph (f)(4)(iii) of this section, is less than the existing repayment mechanism amount.

(3) CMS will notify the ACO in writing if the ACO may elect to decrease the amount of its repayment mechanism pursuant to this paragraph (f)(4)(iv)(B). The ACO must submit such election, together with revised repayment mechanism documentation, in a form and manner and by a deadline specified by CMS. CMS will review the revised repayment mechanism documentation and may reject the election if the repayment mechanism documentation does not comply with the requirements of this paragraph (f).

(5) After the repayment mechanism has been used to repay any portion of shared losses owed to CMS, the ACO must replenish the amount of funds available through the repayment mechanism within 90 days. The resulting amount available through the repayment mechanism must be at least the amount specified by CMS in accordance with paragraph (f)(4) of this section.

(6) \* \* \*

(ii) For a renewing ACO, or a re-entering ACO that is the same legal entity as an ACO that previously participated in the program, that wishes to use its existing repayment mechanism to establish its ability to repay any shared losses incurred for performance years in the new agreement period, the existing repayment mechanism must be amended to meet one of the following criteria.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

\* \* \* \* \*

44. Section 425.224 is amended by revising paragraph (b)(1)(ii)(A) to read as follows:

**§ 425.224 Application procedures for renewing ACOs and re-entering ACOs.**

\* \* \* \* \*

(b) \* \* \*

(1) \* \* \*

(ii) \* \* \*

(A) Whether the ACO demonstrated a pattern of failure to meet the quality performance standards or met any of the criteria for termination under § 425.316(c)(1)(ii) or (c)(2)(ii).

\* \* \* \* \*

**§ 425.302 [Amended]**

45. Section 425.302 is amended in paragraph (a)(1) by removing the reference “§ 425.500” and adding in its place the references “§ 425.500 or § 425.510, as applicable”.

46. Section 425.316 is amended by revising paragraph (c) to read as follows:

**§ 425.316 Monitoring of ACOs.**

\* \* \* \* \*

(c) *Monitoring ACO compliance with quality performance standards.* To identify ACOs that are not meeting the quality performance standards, CMS will review an ACO's submission of quality measurement data under § 425.500 or § 425.512. CMS may request additional documentation from an ACO, ACO participants, or ACO providers/suppliers, as appropriate. If an ACO does not meet quality performance standards or fails to report on one or more quality measures, CMS will take the following actions:

(1) *For performance years (or a performance period) beginning on or before January 1,*

2020. (i) The ACO may be given a warning for the first time it fails to meet the minimum

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

attainment level on at least 70 percent of the measures, as determined under § 425.502, in one or more domains and may be subject to a CAP. CMS may forgo the issuance of the warning letter depending on the nature and severity of the noncompliance and instead subject the ACO to actions set forth at § 425.216 or immediately terminate the ACO's participation agreement under § 425.218.

(ii) The ACO's compliance with the quality performance standards will be re-evaluated the following year. If the ACO continues to fail to meet the quality performance standard in the following year, the agreement will be terminated.

(iii) An ACO will not qualify to share in savings in any year it fails to report accurately, completely, and timely on the quality performance measures.

(2) *For performance years beginning on or after January 1, 2021.* (i) If the ACO fails to meet the quality performance standard, CMS may take one or more of the actions prior to termination specified in § 425.216. Depending on the nature and severity of the noncompliance, CMS may forgo pre-termination actions and may immediately terminate the ACO's participation agreement under § 425.218.

(ii) CMS will terminate an ACO's participation agreement under any of the following circumstances:

(A) The ACO fails to meet the quality performance standard for 2 consecutive performance years within an agreement period.

(B) The ACO fails to meet the quality performance standard for any 3 performance years within an agreement period, regardless of whether the years are in consecutive order.

(C) A renewing ACO or re-entering ACO fails to meet the quality performance standard for the last performance year of the ACO's previous agreement period and this occurrence was either the second consecutive performance year of failed quality performance or the third

nonconsecutive performance year of failed quality performance during the previous agreement period.

(D) A renewing ACO or re-entering ACO fails to meet the quality performance standard for 2 consecutive performance years across 2 agreement periods, specifically the last performance year of the ACO’s previous agreement period and the first performance year of the ACO’s new agreement period.

47. Section 425.400 is amended by—

- a. Revising paragraph (c)(1)(iv) introductory text;
- b. Adding paragraph (c)(1)(v); and
- c. Revising paragraph (c)(2).

The revisions and addition read as follows:

**§ 425.400 General.**

\* \* \* \* \*

(c) \* \* \*

(1) \* \* \*

(iv) For performance years (or a performance period) during 2019, and performance year 2020 as follows:

\* \* \* \* \*

(v) For the performance year starting on January 1, 2021, and subsequent performance years as follows:

(A) CPT codes:

(1) 96160 and 96161 (codes for administration of health risk assessment).

(2) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

management of a patient).

(3) 99304 through 99318 (codes for professional services furnished in a nursing facility; professional services or services reported on an FQHC or RHC claim identified by these codes are excluded when furnished in a SNF).

(4) 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).

(5) 99341 through 99350 (codes for evaluation and management services furnished in a patient's home for claims identified by place of service modifier 12).

(6) 99354 and 99355 (add-on codes, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code under this paragraph (c)(1)(v)).

(7) 99421, 99422, and 99423 (codes for online digital evaluation and management).

(8) 99439 (code for non-complex chronic care management).

(9) 99483 (code for assessment of and care planning for patients with cognitive impairment).

(10) 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).

(11) 99487, 99489, 99490 and 99491 (codes for chronic care management).

(12) 99495 and 99496 (codes for transitional care management services).

(13) 99497 and 99498 (codes for advance care planning; services identified by these codes furnished in an inpatient setting are excluded).

(B) HCPCS codes:

(1) G0402 (code for the Welcome to Medicare visit).

(2) G0438 and G0439 (codes for the annual wellness visits).

(3) G0442 (code for alcohol misuse screening service).

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

- (4) G0443 (code for alcohol misuse counseling service).
- (5) G0444 (code for annual depression screening service).
- (6) G0463 (code for services furnished in ETA hospitals).
- (7) G0506 (code for chronic care management).
- (8) G2010 (code for the remote evaluation of patient video/images).
- (9) G2012 (code for virtual check-in).
- (10) G2058 (code for non-complex chronic care management).
- (11) G2064 and G2065 (codes for principal care management services).
- (12) G2214 (code for psychiatric collaborative care model).

(2)(i) When the assignment window (as defined in § 425.20) for a benchmark or performance year includes any month(s) during the COVID-19 Public Health Emergency defined in § 400.200 of this chapter, in determining beneficiary assignment, we use the primary care service codes identified in paragraph (c)(1) of this section, and additional primary care service codes as follows:

(A) CPT codes:

- (1) 99421, 99422, and 99423 (codes for online digital evaluation and management services).
- (2) 99441, 99442, and 99443 (codes for telephone evaluation and management services).

(B) HCPCS codes:

- (1) G2010 (code for the remote evaluation of patient video/images).
- (2) G2012 (code for virtual check-in).

(ii) The additional primary care service codes specified in paragraph (c)(2)(i) of this section are applicable to all months of the assignment window (as defined in §425.20), when the assignment window includes any month(s) during the COVID-19 Public Health Emergency defined in §400.200 of this chapter.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

48. Section 425.500 is amended by revising the section heading and paragraph (d) to read as follows:

**§ 425.500 Measures to assess the quality of care furnished by an ACO for performance years (or a performance period) beginning on or before January 1, 2020.**

\* \* \* \* \*

(d) *Patient experience of care survey.* (1) For performance years (or a performance period) beginning in 2014 through 2019, ACOs must select a CMS-certified vendor to administer the survey and report the results accordingly.

(2) For performance year 2020, CMS waives the CAHPS for ACOs reporting requirement and will assign all ACOs automatic credit for the CAHPS for ACOs survey measures.

\* \* \* \* \*

49. Section 425.502 is amended by revising the section heading to read as follows:

**§ 425.502 Calculating the ACO quality performance score for performance years (or a performance period) beginning on or before January 1, 2020.**

\* \* \* \* \*

50. Section 425.508 is amended by revising the paragraph (a) heading and adding paragraph (b) to read as follows:

**§ 425.508 Incorporating quality reporting requirements related to the Quality Payment Program.**

(a) *For performance years (or a performance period) beginning in 2017 – 2020.* \*

\* \*

(b) *For performance years beginning on or after January 1, 2021.* ACOs must submit the quality data via the Alternative Payment Model Performance Pathway (APP) established under

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

§ 414.1367 of this chapter, to satisfactorily report on behalf of the eligible clinicians who bill under the TIN of an ACO participant for purposes of the MIPS Quality performance category of the Quality Payment Program.

51. Section 425.510 is added to subpart F to read as follows:

**§ 425.510 Application of the Alternative Payment Model Performance Pathway (APP) to Shared Savings Program ACOs for performance years beginning on or after January 1, 2021.**

(a) *General.* (1) CMS establishes quality performance measures to assess the quality of care furnished by the ACO. If the ACO demonstrates to CMS that it has satisfied the quality performance requirements in this subpart, and the ACO meets all other applicable requirements, the ACO is eligible to receive shared savings.

(2) CMS seeks to improve the quality of care furnished by ACOs over time by specifying higher standards, new measures, or both.

(b) *Quality reporting.* ACOs must report quality data via the APP established under § 414.1367 of this chapter, according to the method of submission established by CMS.

(c) *Audit and validation of data.* CMS retains the right to audit and validate quality data reported by an ACO under paragraph (b) of this section according to § 414.1390 of this chapter.

52. Section 425.512 is added to subpart F to read as follows:

**§ 425.512 Determining the ACO quality performance standard for performance years beginning on or after January 1, 2021.**

(a) *Establishing a quality performance standard.* (1) *Overall standard.* The quality performance standard is the overall standard the ACO must meet in order to be eligible to receive shared savings for a performance year. An ACO will not qualify to share in savings in any year it fails to meet the quality performance standard.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(2) *For performance year 2022 and subsequent performance years.* For the first performance year of an ACO's first agreement period under the Shared Savings Program, if the ACO meets the data completeness requirement at § 414.1340 of this chapter and case minimum requirement at § 414.1380 of this chapter on the three measures it is actively required to report and fields a CAHPS for MIPS survey via the APP, the ACO will meet the quality performance standard.

(3) *For performance years 2021 and 2022.* (i) For all ACOs, except as specified in paragraph (a)(2) of this section, CMS designates the quality performance standard as the ACO reporting quality data via the APP established under § 414.1367 of this chapter, according to the method of submission established by CMS and achieving a quality performance score that is equivalent to or higher than the 30<sup>th</sup> percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring.

(ii) *For performance year 2021.* If an ACO does not report any of the ten CMS Web Interface measures or any of the three measures it is actively required to report and does not field a CAHPS for MIPS survey via the APP, the ACO will not meet the quality performance standard.

(iii) *For performance year 2022.* If an ACO does not report any of the three measures it is actively required to report and does not field a CAHPS for MIPS survey via the APP, the ACO will not meet the quality performance standard.

(4) *For performance years 2023 and subsequent performance years.* (i) For all ACOs, except as specified in paragraph (a)(2) of this section, CMS designates the quality performance standard as the ACO reporting quality data via the APP established under § 414.1367 of this chapter, according to the method of submission established by CMS and achieving a quality performance score that is equivalent to or higher than the 40<sup>th</sup> percentile across all MIPS Quality

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

performance category scores, excluding entities/providers eligible for facility-based scoring.

(ii) If an ACO does not report any of the three measures it is actively required to report and does not field a CAHPS for MIPS survey via the APP, the ACO will not meet the quality performance standard.

(b) *Extreme and uncontrollable circumstances.* For performance year 2021 and subsequent performance years, including the applicable quality data reporting period for the performance year, CMS uses an alternative approach to calculating the quality score for ACOs affected by extreme and uncontrollable circumstances instead of the methodology specified in paragraph (a) of this section as follows:

(1) CMS determines the ACO was affected by an extreme and uncontrollable circumstance based on either of the following:

(i) Twenty percent or more of the ACO's assigned beneficiaries reside in an area identified under the Quality Payment Program as being affected by an extreme and uncontrollable circumstance.

(A) Assignment is determined under subpart E of this part.

(B) In making this determination, CMS uses the quarter four list of assigned beneficiaries.

(ii) The ACO's legal entity is located in an area identified under the Quality Payment Program as being affected by an extreme and uncontrollable circumstance. An ACO's legal entity location is based on the address on file for the ACO in CMS' ACO application and management system.

(2) If CMS determines the ACO meets the requirements of paragraph (b)(1) of this section, CMS calculates the ACO's quality score as follows:

(i) For performance years 2021 and 2022, the ACO's minimum quality performance score

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

is set to the equivalent of the 30<sup>th</sup> percentile MIPS Quality performance category score for the relevant performance year as determined under paragraph (a)(3) of this section.

(ii) For performance year 2023 and subsequent performance years, the ACO's minimum quality performance score is set to the equivalent of the 40<sup>th</sup> percentile MIPS Quality performance category score for the relevant performance year as determined under paragraph (a)(4) of this section.

(3) If the ACO reports quality data via the APP and meets data completeness and case minimum requirements:

(i) For performance years 2021 and 2022, CMS will use the higher of the ACO's quality performance score or the equivalent of the 30<sup>th</sup> percentile MIPS Quality performance category score for the relevant performance year.

(ii) For performance year 2023 and subsequent performance years, CMS will use the higher of the ACO's quality performance score or the equivalent of the 40<sup>th</sup> percentile MIPS Quality performance category score for the relevant performance year.

(4) CMS applies determinations made under the Quality Payment Program with respect to—

- (i) Whether an extreme and uncontrollable circumstance has occurred; and
- (ii) The affected areas.

(5) CMS has sole discretion to determine the time period during which an extreme and uncontrollable circumstance occurred, the percentage of the ACO's assigned beneficiaries residing in the affected areas, and the location of the ACO legal entity.

53. Section 425.600 is amended by revising paragraph (f)(4)(i) to read as follows:

**§ 425.600 Selection of risk model.**

\* \* \* \* \*

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(f) \* \* \*

(4) \* \* \*

(i) The quality performance standard as described in § 425.502(a) or § 425.512(a), as applicable.

\* \* \* \* \*

54. Section 425.601 is amended by revising paragraphs (a)(9) and (f)(5)(iv) to read as follows:

**§ 425.601 Establishing, adjusting, and updating the benchmark for agreement periods beginning on July 1, 2019, and in subsequent years.**

(a) \* \* \*

(9) For the second and each subsequent performance year during the term of the agreement period, the ACO's benchmark is adjusted for the following, as applicable: for the addition and removal of ACO participants or ACO providers/suppliers in accordance with §425.118(b), for a change to the ACO's beneficiary assignment methodology selection under §425.226(a)(1), and for a change to the beneficiary assignment methodology specified in subpart E of this part. To adjust the benchmark, CMS does the following:

(i) Takes into account the expenditures of beneficiaries who would have been assigned to the ACO in any of the 3 most recent years prior to the start of the agreement period.

(ii) Redetermines the regional adjustment amount under paragraph (a)(8) of this section, according to the ACO's assigned beneficiaries for BY3.

\* \* \* \* \*

(f) \* \* \*

(5) \* \* \*

(iv) If during the term of the agreement period CMS adjusts the ACO's benchmark, as

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

specified in paragraph (a)(9) of this section, CMS redetermines whether the ACO is considered to have lower spending or higher spending compared to the ACO's regional service area for purposes of determining the percentage in paragraphs (f)(1) and (2) of this section used in calculating the adjustment under either paragraph (a)(8) or (e) of this section.

\* \* \* \* \*

55. Section 425.602 is amended by revising paragraph (a)(8) to read as follows:

**§ 425.602 Establishing, adjusting, and updating the benchmark for an ACO's first agreement period beginning on or before January 1, 2018.**

(a) \* \* \*

(8) The ACO's benchmark is adjusted for the addition and removal of ACO participants or ACO providers/suppliers in accordance with §425.118(b) and for a change to the beneficiary assignment methodology specified in subpart E of this part, as applicable, to take into account the expenditures for beneficiaries who would have been assigned to the ACO in any of the 3 most recent years prior to the start of the agreement period.

\* \* \* \* \*

56. Section 425.603 is amended by revising paragraphs (c)(8) and (c)(9)(ii)(B)(4)(iv) to read as follows:

**§ 425.603 Resetting, adjusting, and updating the benchmark for a subsequent agreement period beginning on or before January 1, 2019.**

\* \* \* \* \*

(c) \* \* \*

(8) The ACO's benchmark is adjusted for the following, as applicable: for the addition and removal of ACO participants or ACO providers/suppliers in accordance with §425.118(b), and for a change to the beneficiary assignment methodology specified in subpart E of this part.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

To adjust the benchmark, CMS does the following:

(i) Takes into account the expenditures for beneficiaries who would have been assigned to the ACO in any of the 3 most recent years prior to the start of the agreement period.

(ii) Redetermines the regional adjustment amount under paragraph (c)(9) of this section, according to the ACO's assigned beneficiaries for BY3.

(9) \* \* \*

(ii) \* \* \*

(B) \* \* \*

(4) \* \* \*

(iv) If CMS adjusts the ACO's benchmark, as specified in paragraph (c)(8) of this section, CMS redetermines whether the ACO is considered to have lower spending or higher spending compared to the ACO's regional service area for purposes of determining the percentage used in calculating the adjustment in paragraphs (c)(9)(ii)(B)(1) and (2) of this section.

\* \* \* \* \*

57. Section 425.604 is amended by revising paragraphs (c) and (d) to read as follows:

**§ 425.604 Calculation of savings under the one-sided model.**

\* \* \* \* \*

(c) *Qualification for shared savings payment--(1) For performance years (or a performance period) beginning on or before January 1, 2020.* In order to qualify for shared savings, an ACO must meet or exceed its minimum savings rate determined under paragraph (b) of this section, meet the minimum quality performance standards established under § 425.502, and otherwise maintain its eligibility to participate in the Shared Savings Program under this part.

(2) *For the performance year beginning on January 1, 2021.* To qualify for shared

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

savings, an ACO must meet or exceed its minimum savings rate determined under paragraph (b) of this section, meet the quality performance standard established under § 425.512, and otherwise maintain its eligibility to participate in the Shared Savings Program under this part.

(d) *Final sharing rate--(1) For performance years (or a performance period) beginning on or before January 1, 2020.* An ACO that meets all the requirements for receiving shared savings payments under the one-sided model will receive a shared savings payment of up to 50 percent of all savings under the updated benchmark, as determined on the basis of its quality performance under § 425.502 (up to the performance payment limit described in paragraph (e)(2) of this section).

(2) *For the performance year beginning on January 1, 2021.* An ACO that meets all the requirements for receiving shared savings payments under Track 1 will receive a shared savings payment of 50 percent of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (e)(2) of this section).

\* \* \* \* \*

58. Section 425.605 is amended by revising paragraphs (c), (d)(1)(i)(A), (d)(1)(ii)(A), (d)(1)(iii)(A), (d)(1)(iv)(A), and (d)(1)(v)(A) to read as follows:

**§ 425.605 Calculation of shared savings and losses under the BASIC track.**

\* \* \* \* \*

(c) *Qualification for shared savings payment--(1) For performance years beginning on or before January 1, 2020.* To qualify for shared savings, an ACO must meet the minimum savings rate requirement established under paragraph (b) of this section, meet the minimum quality performance standards established under § 425.502, and otherwise maintain its eligibility to participate in the Shared Savings Program under this part.

(2) *For performance years beginning on or after January 1, 2021.* To qualify for shared

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

savings, an ACO must meet the minimum savings rate requirement established under paragraph (b) of this section, meet the quality performance standard established under § 425.512, and otherwise maintain its eligibility to participate in the Shared Savings Program under this part.

(d) \* \* \*

(1) \* \* \*

(i) \* \* \*

(A) *Final sharing rate--(1) For performance years beginning on or before January 1, 2020.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level A, receives a shared savings payment of up to 40 percent of all the savings under the updated benchmark, as determined on the basis of its quality performance under §425.502 (up to the performance payment limit described in paragraph (d)(1)(i)(B) of this section).

(2) *For performance years beginning on or after January 1, 2021.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level A, receives a shared savings payment of 40 percent of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(i)(B) of this section).

\* \* \* \* \*

(ii) \* \* \*

(A) *Final sharing rate--(1) For performance years beginning on or before January 1, 2020.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level B, receives a shared savings payment of up to 40 percent of all the savings under the updated benchmark, as determined on the basis of its quality performance under § 425.502 (up to the performance payment limit described in paragraph (d)(1)(ii)(B) of this section).

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(2) *For performance years beginning on or after January 1, 2021.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level B, receives a shared savings payment of 40 percent of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(ii)(B) of this section).

\* \* \* \* \*

(iii) \* \* \*

(A) *Final sharing rate--(1) For performance years beginning on or before January 1, 2020.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level C, receives a shared savings payment of up to 50 percent of all the savings under the updated benchmark, as determined on the basis of its quality performance under § 425.502 (up to the performance payment limit described in paragraph (d)(1)(iii)(B) of this section).

(2) *For performance years beginning on or after January 1, 2021.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level C, receives a shared savings payment of 50 percent of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(iii)(B) of this section).

\* \* \* \* \*

(iv) \* \* \*

(A) *Final sharing rate--(1) For performance years beginning on or before January 1, 2020.* An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level D, receives a shared savings payment of up to 50 percent of all the savings under the updated benchmark, as determined on the basis of its quality performance under § 425.502 (up to the performance payment limit described in paragraph (d)(1)(iv)(B) of this section).

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(2) For performance years beginning on or after January 1, 2021. An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level D, receives a shared savings payment of 50 percent of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(iv)(B) of this section).

\* \* \* \* \*

(v) \* \* \*

(A) Final sharing rate--(1) For performance years beginning on or before January 1, 2020. An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level E, receives a shared savings payment of up to 50 percent of all the savings under the updated benchmark, as determined on the basis of its quality performance under § 425.502 (up to the performance payment limit described in paragraph (d)(1)(v)(B) of this section).

(2) For performance years beginning on or after January 1, 2021. An ACO that meets all the requirements for receiving shared savings payments under the BASIC track, Level E, receives a shared savings payment of 50 percent of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (d)(1)(v)(B) of this section).

\* \* \* \* \*

59. Section 425.606 is amended by revising paragraphs (c), (d), and (f) to read as follows:

**§ 425.606 Calculation of shared savings and losses under Track 2.**

\* \* \* \* \*

(c) Qualification for shared savings payment--(1) For performance years (or a performance period) beginning on or before January 1, 2020. To qualify for shared savings, an ACO must meet the minimum savings rate requirement established under paragraph (b) of this

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

section, meet the minimum quality performance standards established under § 425.502, and otherwise maintain its eligibility to participate in the Shared Savings Program under this part.

(2) *For the performance year beginning on January 1, 2021.* To qualify for shared savings, an ACO must meet the minimum savings rate requirement established under paragraph (b) of this section, meet the quality performance standard established under § 425.512, and otherwise maintain its eligibility to participate in the Shared Savings Program under this part.

(d) *Final sharing rate--(1) For performance years (or a performance period) beginning on or before January 1, 2020.* An ACO that meets all the requirements for receiving shared savings payments under Track 2 will receive a shared savings payment of up to 60 percent of all the savings under the updated benchmark, as determined on the basis of its quality performance under § 425.502 (up to the performance payment limit described in paragraph (e)(2) of this section).

(2) *For the performance year beginning on January 1, 2021.* An ACO that meets all the requirements for receiving shared savings payments under Track 2 will receive a shared savings payment of 60 percent of all the savings under the updated benchmark (up to the performance payment limit described in paragraph (e)(2) of this section).

\* \* \* \* \*

(f) *Shared loss rate--(1) For performance years (or a performance period) beginning on or before January 1, 2020.* For an ACO that is required to share losses with the Medicare program for expenditures over the updated benchmark, the amount of shared losses is determined based on the inverse of its final sharing rate described in paragraph (d)(1) of this section (that is, 1 minus the final shared savings rate determined under paragraph (d)(1) of this section). The shared loss rate—

(i) May not exceed 60 percent; and

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

(ii) May not be less than 40 percent.

(2) *For the performance year beginning on January 1, 2021.* For an ACO that is required to share losses with the Medicare program for expenditures over the updated benchmark, the amount of shared losses is determined as follows:

(i) If the ACO meets the quality performance standard established in § 425.512, CMS determines the shared loss rate as follows:

(A) Calculate the quotient of the MIPS Quality performance category points earned divided by the total MIPS Quality performance category points available.

(B) Calculate the product of the quotient determined in paragraph (f)(2)(i)(A) of this section and 60 percent.

(C) Calculate the shared loss rate as 1 minus the product determined in paragraph (f)(2)(i)(B) of this section. The shared loss rate—

(1) May not exceed 60 percent; and

(2) May not be less than 40 percent.

(ii) If the ACO fails to meet the quality performance standard established in § 425.512, the shared loss rate is 60 percent.

\* \* \* \* \*

60. Section 425.610 is amended by revising paragraphs (c), (d), and (f) to read as follows:

**§ 425.610 Calculation of shared savings and losses under the ENHANCED track.**

\* \* \* \* \*

(c) *Qualification for shared savings payment--(1) For performance years (or a performance period) beginning on or before January 1, 2020.* To qualify for shared savings, an ACO must meet the minimum savings rate requirement established under paragraph (b) of this

Note: The following appendices will not appear in the Code of Federal Regulations.

**APPENDIX 1: MIPS QUALITY MEASURES**

**NOTE:** Except as otherwise noted in this final rule, previously finalized measures and specialty measure sets will continue to apply for the 2023 MIPS payment year and future years. In addition, electronic Clinical Quality Measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table A as follows: NQF # / eCQM NQF #.

**TABLE Group A: New Quality Measures Finalized for the 2023 MIPS Payment Year and Future Years**

**A.1. Hospital-Wide, 30-Day, All-Cause Unplanned Readmission (HWR) Rate for the Merit-Based Incentive Payment System (MIPS) Groups**

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	479
Description:	This measure is a re-specified version of the measure, “Risk-adjusted readmission rate (RARR) of unplanned readmission within 30 days of hospital discharge for any condition” (NQF 1789), which was developed for patients 65 years and older using Medicare claims. This re-specified measure attributes outcomes to MIPS participating clinician groups and assesses each group’s readmission rate. The measure comprises a single summary score, derived from the results of five models, one for each of the following specialty cohorts (groups of discharge condition categories or procedure categories): medicine, surgery/gynecology, cardio-respiratory, cardiovascular, and neurology.
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	The outcome for this measure is unplanned all-cause 30-day readmission. Readmission is defined as a subsequent inpatient admission to any acute care facility which occurs within 30 days of the discharge date of an eligible index admission. Any readmission is eligible to be counted as an outcome, except those that are considered planned. To align with data years used, the planned readmission algorithm version 4.0 was used to classify readmissions as planned or unplanned.
Denominator:	Patients eligible for inclusion in the measure have an index admission hospitalization to which the readmission outcome is attributed and includes admissions for patients: Enrolled in Medicare Fee-For-Service (FFS) Part A for the 12 months prior to the date of admission; Aged 65 or over; Discharged alive from a non-federal short-term acute care hospital; and, Not transferred to another acute care facility.
Exclusions:	1. Patients discharged against medical advice (AMA) are excluded. 2. Admissions for patients to a PPS-exempt cancer hospital are excluded. 3. Admissions primarily for medical treatment of cancer are excluded. 4. Admissions primarily for psychiatric disease are excluded. 5. Admissions for “rehabilitation care; fitting of prostheses and adjustment devices” (CCS 254) are excluded. 6. Admissions where patient cannot be attributed to a clinician group.
Measure Type:	Outcome
Measure Domain:	Communication and Care Coordination (section 1848(s)(1)(B)(iii) of the Act)
High Priority Measure:	Yes (Outcome)
Collection Type:	Administrative Claims
Measure Implementation:	MIPS eligible groups with at least 16 clinicians / 200 case minimum / 1 year performance period (January 1 <sup>st</sup> – December 31 <sup>st</sup> )
Rationale:	This risk-adjusted administrative claims measure was proposed to address unplanned readmissions at the physician group level of Medicare aged > 65 patients. This measure is a re-specified version of the hospital-level measure, “Hospital-Wide All-Cause, Unplanned Readmission Measure” (NQF #1789), which has been in the MIPS program since 2017. In the event we did not finalize this measure, we would have maintained the current measure Q458: All-Cause Hospital Readmission. The re-specification of this measure promotes a systems-level approach by clinicians and focus on high-risk conditions, such as COPD and heart failure. The measure was evaluated by the MAP and was conditionally supported pending NQF endorsement. While we agreed with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required in section 1848(q)(2)(D)(v) of the Act. A risk-adjusted readmission rate of 15.3 percent at the physician group level was provided by the measure developer. The readmission rate indicates a substantial need to reduce the expected rate and variation of rates across eligible physician groups. Physician groups have the capability to influence unplanned readmission outcomes by appropriate medication reconciliation at discharge, reduction of infection risk, and ensuring proper outpatient follow-up. As an administrative claims measure, there is no separate reporting burden. To maintain continuity with the existing measure Q458: All-Cause Hospital Readmission, the case minimum will remain at 200 cases for consistency in implementation. For 2023 payment determination, the performance period will include administrative claims from January 1, 2021 to December 31, 2021. For further information regarding the implementation of this measure, please see section IV.A.3.c.(1)(e)(i) of this final rule.

	<p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&amp;ItemID=91911">http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&amp;ItemID=91911</a>.</p>
	<p><b>Comment:</b> One commenter appreciated this measure as a change to the All-Cause Readmissions measure (Q458) to better align with a system-level approach so that patient care can be focused more on high risk conditions. A second commenter supported this new measure, stating that it improves upon the existing readmissions measure as it targets unplanned readmissions to the hospital.</p>
	<p><b>Response:</b> We thank the commenters for supporting the new HWR measure in the MIPS program.</p>
	<p><b>Comment:</b> One commenter appreciated the measure steward's efforts to provide additional justification for attribution of the Hospital-Wide, 30-Day, All-Cause Unplanned Readmission (HWR) measure to the three types of clinician groups, but believed the evidence falls short of demonstrating clear attribution to decreased readmission rates. In addition, the commenter believed the reliability levels for the cardiorespiratory and cardiovascular cohorts continue to be too low for acceptable use. In addition, prior attempts to reduce readmission rates for the heart failure population was associated with a reduction in the rate of readmissions, but also an increase in the rate of death among Medicare patients hospitalized with heart failure. The commenter requested that CMS ensure these issues are considered as the measure continues through development and the endorsement process at NQF.</p>
	<p><b>Response:</b> While the existing literature on the association between clinicians and patient outcomes may be sparse, the Technical Expert Panel (TEP) and clinical consultants, most of whom are clinicians themselves, strongly supported the attribution model and identified the primary inpatient clinician, discharge clinician, and primary outpatient clinician as important roles in providing appropriate care, practical recommendations, and care transitions; and therefore, together, can reduce the risk of readmission. Clinicians are critical contributors to quality improvement, whether as change agents and influencers of health systems or key stakeholders whose acceptance is required for successful or long-lasting improvements. The case minimum will align with that of measure Q458 for consistency in implementation so that only eligible clinician groups with at least 200 cases will receive a measure score. This aligns with feedback received from the public and NQF Admissions/Readmissions committee as well as empiric analyses demonstrating that the minimum case count of 200 cases produces exceptionally reliable measure scores for eligible clinician groups. Using a minimum case count of 200 cases, measure reliability testing conducted by the developers indicated substantial signal to noise reliability across all five specialty cohorts, ranging from 0.82 for surgical to 0.92 for neurology (Adams et al, 2010). Specifically, when limiting to clinician groups with at least 200 cases, the cardiorespiratory and cardiovascular specialty cohorts in question had mean signal to noise reliability scores of 0.89 and 0.88, respectively, indicating substantial reliability (Adams et al, 2010).</p>
	<p>We are aware of the literature that suggested an inverse association between 30-day readmission and 30-day mortality for heart failure admissions (Gupta et al. 2018). However, the paper was based on 416 hospitals, which is a small proportion of hospitals participating in the Hospital Readmission Reduction Program (HRRP), and focuses on the temporal association between the HRRP's introduction and an increase in 30-day and one-year mortality rates for heart failure discharges. We continuously monitor the literature related to the impact and unintended consequences of measurement and CMS programs and found the evidence that readmission measurement has increased heart failure mortality as inconclusive. The Medicare Payment Advisory Commission (MedPAC 2018) completed an analysis on readmission measurement within the HRRP and found no negative effect on mortality. Furthermore, literature using the complete sample of over 4,000 hospitals participating in HRRP found that the decline in readmission was not associated with an increase in heart failure mortality and that lowering readmissions actually tends to also lower mortality (Kera et al 2018 and Dharmarajan et al. 2017). The observed increase in mortality in Gupta et al. (2018) may be due to a decline in admission rates, resulting in patients that are admitted presenting with complex comorbidities and a higher risk of death (Dharmarajan et al. 2017, Krumholz et al. 2015, MedPAC 2018). Given the importance of this potential issue on patient outcomes, we also commissioned an independent group to investigate whether there have been increases in mortality rates after HRRP implementation. We found through this investigation that no sufficient evidence exists to suggest that mortality has increased because of HRRP measurement. We are committed to continuing to monitor trends in readmission and mortality rates through annual measure reevaluation and surveillance tasks.</p>
	<p><b>Comment:</b> One commenter stated that though unlikely, based on the case minimum, this new measure could apply to large radiation oncology or multidisciplinary groups. However, the commenter worried that the attribution methodology will unfairly target radiation oncologists, who do not perform primary care services. CMS finalized specialty exclusions under the Total Per Capita Cost (TPCC) Measure in the 2020 PFS final rule that the TPCC measure is more accurately applied to clinicians who provide primary care services. Under the TPCC, attributed episodes of care are excluded if they are performed by clinicians who (i) frequently perform non-primary care services (for example, global surgery, chemotherapy, anesthesia, radiation therapy) or (ii) are in specialties unlikely to be responsible for providing primary care to a beneficiary (for example, podiatry, dermatology, optometry, ophthalmology). The commenter recommended that CMS apply the same specialty exclusions to the Hospital-Wide, All-Cause Unplanned Readmission claims measure.</p>
	<p><b>Response:</b> There are several exclusion criteria applied to the measure population ("starting cohort"), which include: (1) Admissions for patients to a PPS-exempt cancer hospital; (2) Admissions primarily for medical treatment of cancer; (3) Admissions for "rehabilitation care; fitting of prostheses and adjustment devices;" and (4) Admissions where patient cannot be attributed to a clinician group. Additionally, the measure is risk adjusted to account for differences in patient demographics and clinical characteristics across hospitals. These clinical characteristics may not be related to the quality of care; however, they could impact outcomes for patients. Given the wide variety of discharge diagnosis condition categories, the measure is adjusted for both case mix differences (clinical status of the patient, accounted for by adjusting for comorbidities), as well as service mix differences (the types of conditions/procedures, accounted for by adjusting for the principal discharge diagnosis condition category). Adjustments for case mix differences among clinicians are made by risk-adjusting for patients' comorbid conditions that are identified during inpatient episodes of care for the 12 months prior to the index admission in addition to those present at the index admission. Finally, the intent of the measure is to incentivize coordinated and collaborative care across specialties for a wide variety of patients to reduce unplanned readmissions; radiation oncologists may be able to contribute to optimal care. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p>
	<p><b>Comment:</b> One commenter opposed inclusion of this measure in MIPS, citing their primary concern is the risk of unintended consequences because it does not adequately consider the competing risk of mortality. Providers with higher mortality rates for more severely ill patients could appear to be providing better quality care. Concerns have been raised in multiple peer reviewed publications about the possible association between incentives to reduce admission and increased mortality rates. It is also unclear whether hospital readmission rates truly reflect the quality of care for all patient populations and whether incentivizing lower readmissions could potentially exacerbate disparities in care.</p>
	<p>The commenter suggested that CMS consider a measure such as risk-adjusted home time, which, if carefully designed, might better balance the competing risks of readmission and mortality, and mitigate some of these concerns. CMS may also want to consider the additional recommendations for improving on</p>

Category	Description
	<p>readmission measures and reducing the risk of potential inequities and unintended consequences. Lastly, the commenter noted this measure was more appropriate to attribute at the ACO level only due to better oversight and care coordination to influence performance.</p> <p><b>Response:</b> Researchers have conducted considerable investigation of potential unintended consequences since the implementation of the readmission measures within HRRP. More specifically, the relationship between the implementation of the AMI, heart failure, and pneumonia readmission measures in the HRRP and subsequent trends in their respective AMI, heart failure, and pneumonia mortality rates has been studied. We continuously monitor the literature related to the impact and unintended consequences of measurement and CMS programs and found the evidence that readmission measurement has increased mortality rates as inconclusive. The Medicare Payment Advisory Commission (MedPAC 2018) completed an analysis on readmission measurement within the HRRP and found no negative effect on mortality. MedPAC's 2018 report confirms that the readmission declines have occurred without clear adverse consequences and concluded that mortality rates do not seem to be increasing in relation to HRRP. In fact, for most HRRP conditions, observed mortality declined after HRRP was implemented, while mortality increased for non-HRRP measured conditions. Risk-adjusted mortality rates declined for AMI, pneumonia, and heart failure from 2010 to 2016. Furthermore, the literature demonstrates that there is no evidence for increased inpatient or post-discharge mortality that is directly associated with the timing of the HRRP. In one study, authors examined the rates of readmission and mortality for Medicare patients with heart failure and found that the decline in readmission associated with HRRP was not associated with increase in mortality (Khara et al, 2018). In a second study, the authors found that hospitals lowering readmissions tended to lower mortality (Dharmarajan et al, 2017). Given the importance of this potential issue on patient outcomes, we also commissioned an independent group to investigate whether there have been increases in mortality rates after HRRP implementation. We found through this investigation that no sufficient evidence exists to suggest that mortality has increased because of HRRP measurement. We are committed to continuing to monitor trends in readmission and mortality rates through annual measure reevaluation and surveillance tasks.</p> <p>The measure is risk adjusted to account for differences in patient demographics and clinical characteristics across hospitals. These clinical characteristics may not be related to the quality of care; however, they could impact outcomes for patients. Given the wide variety of discharge diagnosis condition categories, the measure is adjusted for both case mix differences (clinical status of the patient, accounted for by adjusting for comorbidities), as well as service mix differences (the types of conditions/procedures, accounted for by adjusting for the principal discharge diagnosis condition category). Adjustments for case mix differences among clinicians are made by risk-adjusting for patients' comorbid conditions that are identified during inpatient episodes of care for the 12 months prior to the index admission in addition to those present at the index admission. The measure is not risk-adjusted for social risk factors. Measure testing that evaluated the effects of adjusting for social risk factors revealed, after adjustment for clinical factors, a high correlation of 0.99 between unadjusted and adjusted scores as well as a minimal impact on measure scores.</p> <p>There is, in fact, a risk-standardized all-condition readmission measure for accountable care organizations (ACOs) with specifications that are also re-specified from and harmonized with the Hospital-Wide All-Condition 30-Day Risk-Standardized Readmission measure within the Inpatient Quality Reporting (IQR) Program. Introducing hospital-wide readmission measurement within MIPS fills an important gap by creating a mechanism for shared accountability across health providers for readmitted patients and the testing demonstrated meaningful variation in performance across MIPS eligible clinician groups. Additionally, this measure provides greater information and transparency for clinicians and patients to continue to drive improved patient care quality and positive outcomes.</p> <p><b>Comment:</b> Several commenters opposed the addition of this measure for the 2021 performance year. Clinicians and group practices need stability now more than ever, and noted this is not the time to add new metrics, particularly to a category that groups are familiar with already. The commenter expressed significant concerns around administrative claims measures. While CMS asserts these measures do not increase reporting burden since they are calculated on clinicians' behalf, it takes time to study the measures themselves, understand how clinicians are evaluated, and determine how (or if) clinicians can influence performance. With registry or EHR reporting, clinicians can receive real time feedback on measure performance and evaluate whether changes are needed to facilitate improvement. Claims-based measures do not offer the same opportunity, which makes it difficult to improve performance or drive meaningful change.</p> <p><b>Response:</b> For over a decade, readmission after discharge has been a concern both from an aspect of quality and resources, culminating in a national effort to address rates of readmissions for all patients, regardless of age and condition. While we can appreciate the desire for stability, we believe that the Hospital-Wide Readmission measure is a more robust measure as it is based upon the original hospital-level measure has been most rigorously tested and vetted. As an Administrative Claims measure, there is no burden to the clinician regarding collection and scoring. Real-time feedback is not a guaranteed aspect of the eCQMs Specifications or the MIPS CQMs Specifications collection type, but may be a service provided, for example, by a vendor. While this collection type does not provide real-time feedback, CMS supplies eligible clinicians and eligible clinician groups with confidential reports that provide information on measure performance, including patient-level data, to help drive quality improvement. In addition, since they utilize claims data submitted for payment purposes, they provide data elements that are validated through our monitoring and auditing processes and introduce no burden collection of vital information to help drive quality care.</p> <p><b>Comment:</b> One commenter did not support the All-Cause Readmission measure, Q458, because it said it was not suitable for attribution at the clinician or group level. When the newer version of the measure was submitted for NQF consideration (HWR measure), a number of professional organizations disapproved of applying the measure at either the individual clinician level or group practice level.</p> <p><b>Response:</b> This measure is a re-specification of measure Q458 currently within the MIPS program, which attributes outcomes solely to the primary care physician that provides the plurality of care during the measurement period. However, the primary care physician may not be the clinician with opportunity to impact readmissions. The intent of this measure is to improve upon the attribution of the current ACR measure and incentivize collaboration of care across inpatient and outpatient settings by considering shared attribution to up to three eligible clinician groups that provide care for patients inside and outside of the hospital and are therefore in position to influence patient risk of readmission. The TEP and clinical consultants, most of whom are clinicians themselves, supported the attribution model and identified the primary inpatient clinician, discharge clinician, and primary outpatient clinician as important roles in providing appropriate care, practical recommendations, and care transitions. The primary inpatient clinician is responsible for the medical care provided during the admission, referring patients to inpatient specialists and prescribing medications. The delivery of their care during the hospital admission can influence whether the patient returns with unresolved medical issues or side effects from inappropriate medication or dosage. The discharge clinician is responsible for preparing the patient for discharge, including determining the patient is well enough to leave the hospital, understands their condition and treatments, and has been referred to outpatient specialists or therapy, as needed. Providing clear instructions and arrangements help ensure</p>

Category	Description
	<p>that the patient adheres to care, medication, and lifestyle changes outside of the hospital (Bowles et al, 2014, Philips et al, 2004, DeCaporale-Ryan et al, 2017, and Verhaegh et al, 2014). The primary outpatient clinician is responsible for the care of the patient outside of the hospital and can prevent readmissions by ensuring accessibility to care and availability for consultations within 30 days after discharge. Through their individual roles and together through coordinated care, these clinicians can reduce the risk of readmission.</p> <p>NQF panel and committee members have voted on this measure several times, all of which concluded in favor of endorsing the measure. Final endorsement of the measure was deferred to the Spring 2020 Consensus Standards Approval Committee (CSAC) due to efforts to reduce burden for committee members who may need to prioritize COVID-19 in their communities.</p> <p><b>Comment:</b> One commenter stated that HWR measure lacks transparent evaluation on whether it is appropriate to apply the readmission of one patient to multiple physicians since no evidence or testing was provided to support the attribution of this measure to the three distinct groups (discharge physician, primary inpatient care provider, and outpatient primary care provider) during NQF endorsement review. In addition, most of the evidence used to support attribution to physicians involves multiple partners and clinicians such as the health system, hospital, nurse, and/or pharmacist, and there was insufficient evidence provided to support that physicians and practices using the proposed attribution approach. The commenter questioned the ability of the HWR to meaningfully distinguish better or worse performers based on the available benchmarks from the 2017 performance period.</p> <p>Commenters noted there is also a need to determine if additional reductions in scores can be made because readmission rates now somewhat stable. The commenter stated that they did not believe that assignment of responsibility of the reduction of readmissions to multiple physicians and practices in MIPS is appropriate. Lastly, the impact that social risk factors in the risk adjustment model on performance rates has not been fully explored. Due to all of these concerns, the commenter stated that physicians should not be held accountable for the HWR measure and the measure should be removed from the program.</p> <p><b>Response:</b> While the existing literature on the association between clinicians and patient outcomes may be sparse, the TEP and clinical consultants, most of whom are clinicians themselves, supported the attribution model and identified the primary inpatient clinician, discharge clinician, and primary outpatient clinician as important roles in providing appropriate care, practical recommendations, and care transitions; and therefore, together, can reduce the risk of readmission. Clinicians are critical contributors to quality improvement, whether as change agents and influencers of health systems or key stakeholders whose acceptance is required for successful or long-lasting improvements.</p> <p>The measure is intended to improve upon the current ACR measure within MIPS, which unduly attributes readmissions to the clinician that provide the plurality of care during the measurement period, to more appropriately attribute readmissions to up to three clinician groups with the ability to influence the risk of readmission. The shared attribution is meant to reflect the reality that multiple factors and clinicians contribute to patient care and influence outcomes as well as promote a system change towards coordination of care for the benefit of patients. Implementation and reporting of the measure will provide further data and inform the practicality of the attribution model. As done with all measures publicly reported as part of payment programs, we will monitor use of the measure and test the measure on an annual basis.</p> <p>Using data from July 2015 to June 2016, the median risk-standardized readmission rate was 15.3 percent and range was 7.0 percent to 25.1 percent. In other words, patients can expect to have a readmission within 30 days of discharge on an average of 15.3 percent of the time. The best performing clinician groups (7.0 percent) are performing 54.2 percent better than an average performer, while the worse performing clinician groups (25.1 percent) are performing 64.1 percent worse than an average performer. This variation in performance indicates a clear quality gap in which some clinician groups are able to achieve substantially lower than average rates, while up to a quarter of patients for other clinician groups are being readmitted, possibly without clinician group awareness. Recent studies examining trends in readmissions following specific conditions and procedures indicate that similar quality measures and policies have effectively decreased readmission rates and remain important metrics (Blecker et al, 2019, Carey et al, 2015, Mellor et al, 2017, Wasfy et al, 2017).</p> <p>The developer conducted social risk factor testing using two variables that are available and reliably measured, including dual-eligible status and Agency for Healthcare Research and Quality (AHRQ) SES index score. For both social risk factors, the correlation between the adjusted and unadjusted scores was 0.99, indicating extremely high agreement. In addition, they also tested the absolute change in risk-adjusted readmission rates. When incorporating the dual eligible risk factor, the largest change in a hospital-level risk-adjusted readmission rate was 1.74 percent for clinician groups. When incorporating low AHRQ SES, the largest change in a hospital-level risk-adjusted readmission rate was 2.45 percent. Both analyses support the notion that adding these social risk factors would have minimal impact on measure scores. Ongoing research aims to identify valid patient-level social risk factors and highlight disparities related to social risk, and as additional variables become available, they will be considered for testing and inclusion within the measure.</p> <p><b>Comment:</b> One commenter opposed this measure, citing broad-based concerns about the 30-day window for readmissions in CMS measures. Those concerns are heightened with the re-specification of the measure to apply to physician groups in the MIPS. There are numerous social, economic and logistical hurdles that can occur during a 30-day readmission window, many of which are independent of a physician's or group's behavior. If the measure window were shortened to 7 days, attribution would improve.</p> <p><b>Response:</b> We thank the commenter for their comment. The measure is a re-specified version of the hospital-level measure, "Hospital-Wide All-Cause, Unplanned Readmission Measure" (NQF #1789), which is currently reported within IQR, and the "All-Cause Readmission" measure, Q458, which has been in the MIPS program since 2017, both of which also use a 30-day outcome timeframe. The 30-day timeframe is consistent with other CMS readmission measures endorsed by NQF and publicly reported. The literature demonstrates that older adults are more vulnerable to adverse health outcomes for 30 days post discharge, readmissions occurring within 30 days of discharge can be influenced by care and early transition to the non-acute care setting, and that the 30-day timeframe is a clinically meaningful period for providers to communicate with each other and their patients to reduce readmissions. Furthermore, during development of the hospital-level HWR measure, the developer reviewed time to readmission curves over time, which illustrated that rapid early accrual of readmissions, followed by a stable readmission rate, eventually stabilizing by 30 days. The 30-day readmission timeframe is based upon numerous studies that have been completed assessing the association between quality of inpatient or transitional care and early readmission rates (typically 30 days). We believe that a 7-day readmission timeframe may not provide a complete representation of post-discharge observation and follow-up periods that may influence readmissions. As the measure steward, we will take this feedback into consideration during the annual revisions for possible implementation in future years.</p>

Category	Description
	<p><b>Comment:</b> One commenter stated that comparing to the 30-Day All-Cause Hospital Readmission measure, many exclusions have been dropped from the measure, thereby increasing the denominator.</p> <p><b>Response:</b> We thank the commenter for their comment. The goal is not to compare the data from the All-Cause Hospital Readmission measure to the Hospital-Wide, 30 Day, All-Cause Unplanned Readmission (HWR), but to replace the All-Cause Hospital Readmission measure with a more robust measure as it is based upon the original hospital-level measure has been most rigorously tested and vetted. The measure is intended to improve upon the current ACR measure within MIPS, which unduly attributes readmissions to the clinician that provide the plurality of care during the measurement period, to more appropriately attribute readmissions to up to three clinician groups with the ability to influence the risk of readmission. There are several exclusion criteria applied to the measure population (“starting cohort”), in order to identify the appropriate denominator patient population. Additionally, the measure is risk adjusted to account for differences in patient demographics and clinical characteristics across hospitals.</p> <p>After consideration of public comments, we are finalizing the <i>Hospital-Wide, 30-Day, All-Cause Unplanned Readmission (HWR) Rate for the Merit-Based Incentive Payment System (MIPS) Groups</i> measure as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>

**A.2. Risk-standardized complication rate (RSCR) following elective primary total hip arthroplasty (THA) and/or total knee arthroplasty (TKA) for Merit-based Incentive Payment System (MIPS)**

<b>Category</b>	<b>Description</b>
<b>NQF #:</b> / <b>eCQM NQF #:</b>	3493 / N/A
<b>Quality #:</b>	480
<b>Description:</b>	This measure is a re-specified version of the measure, “Hospital-level Risk-standardized Complication rate (RSCR) following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA)” (National Quality Forum 1550), which was developed for patients 65 years and older using Medicare claims. This re-specified measure attributes outcomes to Merit-based Incentive Payment System participating clinicians and/or clinician groups (“provider”) and assesses each provider’s complication rate, defined as any one of the specified complications occurring from the date of index admission to up to 90 days post date of the index procedure.
<b>Measure Steward:</b>	Centers for Medicare & Medicaid Services
<b>Numerator:</b>	The outcome for this measure is complication defined as acute myocardial infarction (AMI), pneumonia, and sepsis/septicemia/shock complications within seven days from the index admission date; death, surgical site bleeding, and pulmonary embolism within 30 days from the index admission; mechanical complications and periprosthetic joint infection/wound infection within 90 days of the index admission. The complication outcome is a dichotomous (yes/no) outcome. If a patient experiences one or more of these complications in the applicable time period, the complication outcome for that patient is counted in the measure as a “yes”.
<b>Denominator:</b>	Patients eligible for inclusion in the measure are those age 65 years and older admitted to non-federal acute care hospitals. An index admission is the hospitalization during which an elective Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) procedure was performed and to which the complication outcome is attributed. Eligible index admissions are identified using International Classification of Diseases-Tenth Revision-Procedure Coding System (ICD-10-PCS) procedure codes in Medicare inpatient claims data. For risk adjustment and outcome assessment, patients must have continuous enrollment in Medicare fee-for-service (FFS) for 12 months prior to the procedure and 90 days after it. The measure cohort is fully harmonized with the existing hospital-level measure.
<b>Exclusions:</b>	This measure excludes from the denominator admissions for patients: 1. With a femur, hip or pelvic fracture coded in the principal discharge diagnosis field for the index admission. 2. Undergoing partial hip arthroplasty (PHA) procedures (with a concurrent Total Hip Arthroplasty or Total Knee Arthroplasty [THA/TKA]). 3. Undergoing revision procedures (with a concurrent THA/TKA). 4. Undergoing resurfacing procedures (with a concurrent THA/TKA). 5. With a mechanical complication coded in the principal discharge diagnosis field for the index admission. 6. With a malignant neoplasm of the pelvis, sacrum, coccyx, lower limbs, or bone/bone marrow or a disseminated malignant neoplasm coded in the principal discharge diagnosis field for the index admission. 7. With a procedure code for removal of implanted devices/prostheses. After excluding the above admissions to identify elective primary THA/TKA procedures, the measure also excludes admissions for patients: 8. Who were transferred to the index hospital. 9. Who leave the hospital against medical advice (AMA). 10. With more than two THA/TKA procedure codes during the index hospitalization. Note: The measure does not count complications that occur in the outpatient setting and do not require a readmission.
<b>Measure Type:</b>	Outcome
<b>Measure Domain:</b>	Patient Safety (section 1848(s)(1)(B)(ii) of the Act)
<b>High Priority Measure:</b>	Yes (Outcome)
<b>Collection Type:</b>	Administrative Claims
<b>Measure Implementation:</b>	MIPS eligible clinicians and groups / 25 case minimum / 3 year performance period (October 1 <sup>st</sup> – September 30 <sup>th</sup> )
<b>Rationale:</b>	<p>This risk-standardized complication rate administrative claims measure was proposed to incentivize improved coordination of care, thereby reducing the number of hospitalizations and days hospitalized for patients, reducing rates of complications, and promoting cost savings resulting from fewer hospitalizations. This measure can improve the quality of surgical care delivery and follow-up care for a common and costly surgical procedure performed for Medicare patients. This measure is a re-specified version of an existing, publicly reported hospital measure, NQF #1550, located at <a href="https://innovation.cms.gov/files/fact-sheet/bpciadvanced-fs-nqf1550.pdf">https://innovation.cms.gov/files/fact-sheet/bpciadvanced-fs-nqf1550.pdf</a>. Additionally, as an administrative claims measure, there is no separate reporting burden. The measure was evaluated by the MAP and is supported for rulemaking and is NQF endorsed (NQF #3493). The measure steward indicated variability among providers and groups with the risk standardized complication rates (RSCR) ranging from 1.2 percent to 7.2 percent across the groups. In adapting the measure for MIPS eligible clinicians, it will assess the same cohort of patients as the hospital measure, but attribute complications to a larger number of entities with a typically lower volume. Thus, we anticipate that the MIPS THA/TKA complication measure will reflect meaningful variation across MIPS eligible clinicians. The median RSCR for MIPS eligible clinicians with more than 25 cases was 2.7 percent with a minimum interquartile range (IQR) of 2.4 percent - 3.2 percent. The median RSCR for MIPS eligible clinician groups with more than 25 cases was 2.8 percent, with a minimum IQR of 2.4 percent - 3.1 percent. This indicates that 50 percent of clinicians have a complication rate of 2.7 percent or more after adjusting for patient age and comorbidities. The best performing clinicians (1.2 percent) are performing 55.6 percent better than an average performer, while the worst performing clinicians (7.2 percent) are performing 166.7 percent worse than an average performer. The best performing clinician groups (1.4 percent) are performing 50 percent better than an average performer, while the worst performing clinicians (5.7 percent) are performing 103.6 percent worse than an average performer. The measure steward believes these results support meaningful variation in rates across clinician and clinician groups with room for improvement.</p> <p>This measure is a re-specification of the existing, publicly reported hospital-level total hip/knee arthroplasty (THA/TKA) 90-day complication measure and has been designed to align with the cohort and methods of that measure. This measure uses 36 months of administrative claims data to calculate risk-standardized complication rates (RSCRs) for MIPS eligible clinicians and MIPS eligible clinician groups with 25 or more cases within the 3-year performance period. This approach balances measure reliability with maximizing the number of clinicians or clinician groups measured. For 2023 payment determination, the performance period will include administrative claims from October 1, 2018 to September 30, 2021. The measure’s numerator assesses the occurrence of complications in the 90 days following the index admission date; therefore, ending the 3-year performance period on September 30th of the calendar year will allow time for numerator assessment.</p>

Unauthorized disclosure may result in prosecution to the full extent of the law.

Category	Description
	<p>Based on the information provided by the measures steward, we believe this measure is evidence-based and represents an important clinical outcome. For further information regarding the implementation of this measure, please see IV.A.3.c.(1)(e)(i) of this final rule.</p> <p>Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at <a href="http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&amp;ItemID=91911">http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&amp;ItemID=91911</a>.</p>
	<p><b>Comment:</b> One commenter supported this new measure, citing that there is no data submission requirement from clinicians. The commenter requested that consideration be given to fast-tracking this measure for reporting on Physician Compare, as a complement to measure already available on Hospital Compare, so that beneficiaries potentially could access information about the quality and clinical outcomes of joint replacement surgeons. A second commenter stated that orthopedic surgeons would choose to report this measure and also asked for the measure to be included on Physician Compare, or other CMS site.</p>
	<p><b>Response:</b> We thank the commenter for supporting this new measure for inclusion in the MIPS program.</p>
	<p><b>Comment:</b> One commenter indicated that it has urged CMS to consider measure reliability on a measure-by-measure basis and applauds CMS for incorporating a 3-year window to increase the integrity of this measure. The commenter has expressed concerns to CMS about the difficulty of calculating a high level of reliability and validity with 12 months of data for an individual clinician, and has urged CMS to measure surgical care at the group or facility level in order to increase statistical power. This is especially important for procedures with a low complication rate. The commenter supported the direction of this measure since it evaluates individuals and groups over a longer time period for increased reliability, and also aligns with the hospital measure. The commenter recommended that CMS allow for a longer look back period for other MIPS measures, where appropriate. Although risk-adjusted clinical data from a high-fidelity registry is often preferred to claims data, a 36-month collection period of claims data can be used as a proxy for quality outcomes with low event rates.</p>
	<p><b>Response:</b> We thank the commenter for supporting this new measure for inclusion in the MIPS program.</p>
	<p><b>Comment:</b> Several commenters opposed the addition of this measure for the 2021 performance year. Clinicians and group practices need stability now more than ever, and this is not the time to add new metrics, particularly to a category that groups are familiar with already. The commenter expressed significant concerns around administrative claims measures. While CMS asserts these measures do not increase reporting burden since they are calculated on clinicians' behalf, it takes time to study the measures themselves, understand how clinicians are evaluated, and determine how (or if) clinicians can influence performance. With registry or EHR reporting, clinicians can receive real time feedback on measure performance and evaluate whether changes are needed to facilitate improvement. Claims-based measures do not offer the same opportunity, which makes it difficult to improve performance or drive meaningful change. Another commenter said this measure should be delayed and implemented as part of an Orthopedic MVP instead of being implemented as a category-wide population health measure.</p>
	<p><b>Response:</b> We believe that it is important to capture patient outcomes, that is, complication rates, for these procedures to allow for a more comprehensive view of quality of care, patient safety, prevention of and response to complications, and coordination of care. We believe this measure has the potential to illustrate variations seen in quality, help to inform patient choice, be a driver of quality improvement while enhancing care coordination. While we can appreciate the desire for stability, we believe the addition of an Administrative Claims based measure has low burden on clinicians, covers a gap within MIPS, and is important in driving quality care. Real-time feedback is not a guaranteed aspect of the eCQMs Specifications or the MIPS CQMs Specifications collection type, but may be a service provided, for example, by a vendor. While the administrative claims does not provide real-time feedback, CMS supplies eligible clinicians and eligible clinician groups with confidential reports that provide information on measure performance, including patient-level data, to help drive quality improvement. In addition, since they utilize claims data submitted for payment purposes, they provide data elements that are validated through CMS monitoring and auditing processes and introduce no burden collection of vital information related to decreasing complications from elective primary THA and/or TKA therefore improving patient outcomes.</p>
	<p><b>Comment:</b> One commenter did not support including this new measure and requested that if CMS finalizes the measure, it must delay implementation of the measure, not include 2020 data, and provide advance notice given the measure utilizes retrospective data. The commenter was concerned that there is insufficient evidence on how an individual physician or practice could reduce complication rates in these patients and the scientific acceptability of this measure is questionable. In addition, the reliability scores when applying this measure to eligible clinicians with more than 25 admissions was below the minimum acceptable threshold. The commenter was also concerned about the impact COVID-19 may have on volume and outcomes, and did not believe any physician should be evaluated on outcomes that includes 2020 data. Finally, information on how the measure would perform using the MIPS benchmark methodology and Physician Compare Star Ratings has not been provided. In addition, two commenters opposed having a 3-year performance period for this measure. The commenter thought that it would be operationally difficult and would delay actionable feedback and payment adjustments for years. The data received and scored across two years would not reflect true performance during the performance year and would impact scoring on an episode that they treat fewer than 25 times per year. Two commenters thought that a 3-year performance period is far too long to provide meaningful, timely data that would help to inform quality improvement activities and convert it to a data reporting exercise.</p>
	<p><b>Response:</b> THA/TKA elective procedures dramatically improve quality of life and function but can result in serious complications. The associated risk and performance of surgeons are important factors for patients to consider when deciding whether to undergo the elective operation. Current clinician-level THA/TKA quality improvement measures are generally limited to evidence-based processes of care. Measurement of patient outcomes, such as complications, allows for a more comprehensive view of quality of care, capturing complex and critical aspects of care, such as communication between providers, prevention of and response to complications, patient safety, and coordinated transitions to the outpatient environment.</p>
	<p>During the NQF initial endorsement review process, the measure specifications and testing was reviewed by a scientific methods panel, which concluded that the measure was scientifically acceptable, contributing to the ultimate endorsement of the measure. Measure reliability testing conducted by the developer consisted of two approaches, one of which demonstrated acceptable reliability with mean signal to noise reliability scores of 0.786 and 0.769 for eligible clinicians and eligible clinician groups, respectively (Adams et al, 2010). While the other approach, test-retest reliability, yielded lower but still fair reliability scores of 0.35 and 0.47 for eligible clinicians and eligible clinician groups, respectively, the reliability results are consistent with MIPS requirements (Landis and Koch, 1977). During TEP meetings and the NQF initial endorsement review process, stakeholders argued that eligible clinicians and eligible clinician groups with less than 25 cases should also be measured since those surgeons perform fewer procedures and may benefit from quality measurement. A minimum case count of 25 ensures that a measure result is available for most eligible clinicians and eligible clinician groups while maintaining measure reliability. This ensures that we are capturing a more complete patient population by including a broadened performance period. With regard to the 3-year performance period, specifically the COVID-19 Public Health Emergency (PHE) impact, this approach supports clinicians or clinician groups by assuring an adequately sized cohort of THA/TKA elective procedures for the assessment of complications post procedure. An adequate cohort is necessary to demonstrate reliability of results. We expect a decline in elective procedures during the PHE; however, the threshold will protect those clinicians or clinician groups that did not meet the 25 case requirement to ensure reliability. This reporting period approach</p>

Category	Description
	<p>balances measure reliability with maximizing the number of clinicians or clinician groups measured and quantifies the outcome derived from the data. For 2023 payment determination, the performance period will include administrative claims from October 1, 2018 to September 30, 2021. Though the performance period will span three years, performance data will be provided each year to reflect the corresponding performance period. This will ensure meaningful and timely data is available.</p> <p><b>Comment:</b> One commenter stated it would be beneficial to understand why the claims-based measures differ between the two programs as the ACO has a Risk Standardized, All-Cause Unplanned Admissions for Multiple Chronic Conditions measure rather than the Risk-Standardized measure proposed here. The commenter asked that measures be aligned between programs where it makes sense to do so.</p> <p><b>Response:</b> We thank the commenter for their comment. The “Risk-Standardized Acute Admission Rates for Patients with Multiple Chronic Conditions” measure was specifically developed to fulfill a measurement gap, as identified by NQF, for the ambulatory setting, which the literature demonstrates may lower readmissions for patients with multiple chronic conditions through improving access to care, supporting self-care at home, coordinating care across providers, and integrating social work, nursing, and medical services. We previously proposed but did not finalize the All-Cause Unplanned Admissions for Multiple Chronic Conditions measure for the 2021 MIPS performance period/2023 MIPS payment year to allow more time for considering feedback from the MAP on the measure (84 FR 62956). We endeavor to align with other reporting programs when able and will consider inclusion of All-Cause Unplanned Admissions for Multiple Chronic Conditions for future program years through future rulemaking.</p> <p>After consideration of public comments, we are finalizing the <i>Risk-standardized complication rate (RSCR) following elective primary total hip arthroplasty (THA) and/or total knee arthroplasty (TKA) for Merit-based Incentive Payment System (MIPS)</i> measure as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>

**TABLE Group B: New Specialty Measures Sets and Modifications to Previously Finalized Specialty Measure Sets Finalized for the 2023 MIPS Payment Year and Future Years**

We proposed to modify the previously finalized specialty measures sets below based upon review of updates made to existing quality measure specifications, proposed the addition of new measures for inclusion in MIPS, and considered the feedback provided by specialty societies. There may be instances where the quality measures within a specialty set remained static, but the individual measures had proposed substantive changes in Table Group D. In the first column, existing measures with substantive changes described in Table Group D are noted with an asterisk (\*), core measures that align with Core Quality Measure Collaborative (CQMC) core measure set(s) are noted with the symbol (§), and high priority measures are noted with an exclamation point (!). In addition, the Indicator column includes a “high priority type” in parentheses after each high priority indicator (!) to represent fully the regulatory definition of high priority measures. In addition, electronic Clinical Quality Measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table B as follows: NQF # / eCQM NQF #.

**NOTE:**

- In the instance a title and/or measure description had a substantive change finalized in Table Group D, the revised title and/or measure description is reflected in the specialty measure sets located in Table Group B.
- Under Table Group B, we respond to comments that are related to new measures that were proposed for addition to measure sets, and measures that were proposed for removal. Any comments received on previously finalized measures are out of scope and not included in this final rule.
- Measures that were not finalized for removal in this final rule have been added back into the applicable previously finalized specialty set(s) under Table Group B and the reason for their retention is addressed under Table Group C.

The definition of high priority at § 414.1305 includes an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measure.

The following specialty measure set was excluded from this group because we did not propose any changes to this specialty measure set: Anesthesiology. Therefore, we refer readers to the CY 2020 Quality Payment Program final rule for the previously finalized Anesthesiology specialty measure set (84 FR 63218 through 63219).

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**B.1. Allergy/Immunology**

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Allergy/Immunology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

B.1. Allergy/Immunology

MEASURES FINALIZED FOR ADDITION TO THE ALLERGY/IMMUNOLOGY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* ! (Appropriate Use)	N/A / N/A	331	N/A	MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	<b>Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse):</b> Percentage of patients, aged 18 years and older, with a diagnosis of acute viral sinusitis who were prescribed an antibiotic within 10 days after onset of symptoms.	American Academy of Otolaryngology – Head and Neck Surgery Foundation	This measure was proposed for inclusion into the Allergy/Immunology specialty set based on previous stakeholder feedback during previous comment period. Allergists/immunologists treat and frequently manage sinusitis. As such, we agreed with the stakeholder and proposed to add to the Allergy/Immunology specialty set.
* ! (Appropriate Use)	N/A / N/A	332	N/A	MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	<b>Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use):</b> Percentage of patients aged 18 years and older with a diagnosis of acute bacterial sinusitis that were prescribed amoxicillin, with or without clavulanate, as a first line antibiotic at the time of diagnosis.	American Academy of Otolaryngology – Head and Neck Surgery Foundation	This measure was proposed for inclusion into the Allergy/Immunology specialty set based on previous stakeholder feedback during previous comment period. Allergists/immunologists treat and frequently manage sinusitis. As such, we agreed with the stakeholder and proposed to add to the Allergy/Immunology specialty set.
! (Outcome)	N/A / N/A	398	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	<b>Optimal Asthma Control:</b> Composite measure of the percentage of pediatric and adult patients whose asthma is well-controlled as demonstrated by one of three age appropriate patient reported outcome tools and not at risk for exacerbation.	Minnesota Community Measurement	This measure was proposed for inclusion into the Allergy/Immunology specialty set based on previous stakeholder feedback during previous comment period. Allergists/immunologists treat and frequently manage asthma. As such, we agreed with the stakeholder and proposed to add to the Allergy/Immunology specialty set.

**B.3b. Electrophysiology**

**PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE ELECTROPHYSIOLOGY SET**

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM / M / NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	348	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	<b>Implantable Cardioverter-Defibrillator (ICD) Complications Rate:</b> Patients with physician-specific risk-standardized rates of procedural complications following the first time implantation of an ICD.	American College of Cardiology Foundation	This measure was proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

After consideration of public comments as shown in Table C, we are finalizing the measures for removal from the *Electrophysiology Specialty Measure Set* as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

**B.4. Chiropractic Medicine**

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Chiropractic Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

**B.5. Clinical Social Work**

MEASURES FINALIZED FOR ADDITION TO THE CLINICAL SOCIAL WORK SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* ! (Care Coordination)	0326 / N/A	047	N/A	Medicare Part B Claims, MIPS CQMs Specifications	Process	Communication and Care Coordination	<b>Advance Care Plan:</b> Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.	National Committee for Quality Assurance	We proposed in Table D.9 to expand the measure's applicability to include coding that would include clinical social worker clinician type. With the expanded patient population and the clinically relevance to this clinician type, we proposed to add to the Clinical Social Work specialty set.
<p><b>Comment:</b> One commenter stated that in the palliative care setting, clinical social workers are trained to provide counseling services and play an important role in goals of care discussions, naming a surrogate decision maker and developing an advance care plan. The commenter's members regularly hold these discussions with patients and families during the course of care. As this measure is added to the Clinical Social Work set, the commenter strongly recommended that clinical social workers be added to the list of providers who can use CPT code 99497 and the add-on code 99498 and bill for advance care planning services. A second commenter supported the addition of measure Q047 to the Clinical Social Work set.</p> <p><b>Response:</b> We thank the commenters for their support of the addition of clinical social worker clinician type. In regards to the comment requesting updates to CPT codes 99497 and 99498, these codes are not necessary for the utilization of measure Q047, as they are included within the measure to show examples as to what services would typically satisfy the quality action. As noted in the measure specification, the quality-data codes listed do not need to be submitted by MIPS eligible clinicians, groups, or third party intermediaries that utilize this modality for submissions; however, these codes may be submitted for those third party intermediaries that utilize Medicare Part B claims data and submit data to CMS on the clinicians behalf. However, for Medicare Part B claims, adding these codes to the numerator could potentially skew performance calculations and not allow proper distribution of numerator outcomes that reflect accurate performance.</p> <p>After consideration of public comments, we are finalizing the measures for addition to the <i>Clinical Social Work Specialty Measure Set</i> as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>

**B.8. Diagnostic Radiology**

**PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE DIAGNOSTIC RADIOLOGY SET**

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM / M / NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0508 / N/A	146	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	<b>Radiology: Inappropriate Use of “Probably Benign” Assessment Category in Screening Mammograms:</b> Percentage of final reports for screening mammograms that are classified as “probably benign”.	American College of Radiology	This measure was proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

After consideration of public comments as shown in Table C, we are finalizing the measures for removal from the *Diagnostic Radiology Specialty Measure Set* as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

Unauthorized disclosure may result in prosecution to the full extent of the law.

**B.9. Emergency Medicine**

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Emergency Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

MEASURES NOT FINALIZED FOR ADDITION TO THE EMERGENCY MEDICINE SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
*	0053 / N/A	418	N/A	Medicare Part B Claims Specifications, MIPS CQM Specifications	Process	Effective Clinical Care	<b>Osteoporosis Management in Women Who Had a Fracture:</b> The percentage of women age 50-85 who suffered a fracture in the six months prior to the performance period through June 30 of the performance period and who either had a bone mineral density test or received a prescription for a drug to treat osteoporosis in the six months after the fracture.	National Committee for Quality Assurance	We proposed in Table D.89 to expand the clinical setting to include Emergency Medicine. With the expanded patient population and the clinically relevance to this clinician type, we proposed to add to the Emergency Medicine specialty set.
<p><b>Comment:</b> One commenter opposed the addition of measure Q418 to the emergency department as an appropriate setting for this measure, stating that emergency department physicians do not manage these types of services. Furthermore, bone density tests often require a prior authorization, which would make this measure infeasible for an emergency medicine physician who does not oversee the ongoing care of a patient outside of the emergency department. A second commenter was also in opposition, stating that osteoporosis management is a chronic condition measure that requires longitudinal care and retrospective data. It is not an accurate reflection of emergency care and should not be attributable to the emergency physician, who only provides acute care management.</p> <p><b>Response:</b> We agree that this measure may not fit into the emergency department workflow and that these quality actions may not be feasible for the emergency medicine clinician. We will not finalize the addition of measure Q418 to the Emergency Medicine set.</p> <p>After consideration of public comments, we are not finalizing measure Q418 for addition to the <i>Emergency Medicine Specialty Measure Set</i> as indicated for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>

B.11. Family Medicine

MEASURES NOT FINALIZED FOR ADDITION TO THE FAMILY MEDICINE SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
*! (Care Coordination)	0576 / N/A	391	N/A	MIPS CQM Specifications	Process	Communication and Care Coordination	<p><b>Follow-Up After Hospitalization for Mental Illness (FUH):</b>                      The percentage of discharges for patients 6 years of age and older who were hospitalized for treatment of selected mental illness or intentional self-harm diagnoses and who had a follow-up visit with a mental health practitioner. Two rates are submitted:</p> <ul style="list-style-type: none"> <li>• The percentage of discharges for which the patient received follow-up within 30 days after discharge.</li> <li>• The percentage of discharges for which the patient received follow-up within 7 days after discharge.</li> </ul>	National Committee for Quality Assurance	We proposed to add this measure to the Family Medicine specialty set. Stakeholders commented, as we agreed, that the Family Medicine set includes several quality measures that address mental health and substance use disorders. Given the high rates that patients are assessed or treated for these conditions within this specialty, they recommended the inclusion of this measure within the Family Medicine specialty set.
<p><b>Comment:</b> Two commenters opposed the addition of measure Q391 to the Family Medicine set, and noted that the measure specifications require a visit with a mental health professional to satisfy the measure (i.e., a visit with a family physician does not satisfy the measure); therefore application to family medicine is inappropriate.</p> <p><b>Response:</b> We thank the commenters for their comments. We believe that measure Q391 supports the facilitation of follow up care for patients that have been hospitalized with mental illness and represents a meaningful measure within MIPS. However, we understand the concern provided by the commenters and recognize that the quality action of the measure indicates the follow up is with a mental health practitioner. Therefore, we agree that this measure should not be added to the Family Medicine set.</p> <p>After consideration of public comments, we are not finalizing measure Q391 for addition to the <i>Family Medicine Specialty Measure Set</i> as indicated for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>

Unauthorized disclosure may result in prosecution to the full extent of the law.

**B.11. Family Medicine**

**PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE FAMILY MEDICINE SET**

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	333	N/A	MIPS CQMs Specifications	Efficiency	Efficiency and Cost Reduction	<b>Adult Sinusitis: Computerized Tomography (CT) for Acute Sinusitis (Overuse):</b> Percentage of patients aged 18 years and older, with a diagnosis of acute sinusitis who had a computerized tomography (CT) scan of the paranasal sinuses ordered at the time of diagnosis or received within 28 days after date of diagnosis.	American Academy of Otolaryngology - Head and Neck Surgery Foundation	This measure was proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	408	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<b>Opioid Therapy Follow-up Evaluation:</b> All patients 18 and older prescribed opiates for longer than six weeks duration who had a follow-up evaluation conducted at least every three months during Opioid Therapy documented in the medical record.	American Academy of Neurology	This measure was proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	412	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<b>Documentation of Signed Opioid Treatment Agreement:</b> All patients 18 and older prescribed opiates for longer than six weeks duration who signed an opioid treatment agreement at least once during Opioid Therapy documented in the medical record.	American Academy of Neurology	This measure was proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	414	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<b>Evaluation or Interview for Risk of Opioid Misuse:</b> All patients 18 and older prescribed opiates for longer than six weeks duration evaluated for risk of opioid misuse using a brief validated instrument (e.g. Opioid Risk Tool, Screener and Opioid Assessment for Patients with Pain, revised (SOAPP-R)) or patient interview documented at least once during Opioid Therapy in the medical record.	American Academy of Neurology	This measure was proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

After consideration of public comments as shown in Table C, we are finalizing the measures for removal from the *Family Medicine Specialty Measure Set* as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

**B.12. Gastroenterology**

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Gastroenterology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

<p><b>Comment:</b> One commenter indicated that measures Q047, Q128, Q130, Q226, Q317, and Q374, included in the General Surgery set, have substantive changes proposed under the applicable D Tables (D.9, D.24, D.25, D.46, D.64, and D.73) that measure preventive care services, which do not directly align with most surgical workflows. The commenter believes that administering and measuring population health and preventive care activities are important, but these measures should not make up the majority of the General Surgery set as they offer little support in understanding the quality of surgical care.</p> <p><b>Response:</b> We did not propose any changes to the General Surgery set. Of note, the substantive changes finalized for the aforementioned measures do not change the intent of the measures. We encourage the commenter to submit this comment during the Solicitation for Specialty Sets for potential implementation in future years.</p>

**B.14. Geriatrics**

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE GERIATRICS SET								
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM M NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	412	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<b>Documentation of Signed Opioid Treatment Agreement:</b> All patients 18 and older prescribed opiates for longer than 6 weeks duration who signed an opioid treatment agreement at least once during Opioid Therapy documented in the medical record.	American Academy of Neurology	This measure was proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	414	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<b>Evaluation or Interview for Risk of Opioid Misuse:</b> All patients 18 and older prescribed opiates for longer than six weeks duration evaluated for risk of opioid misuse using a brief validated instrument (e.g. Opioid Risk Tool, Screener and Opioid Assessment for Patients with Pain, revised (SOAPP-R)) or patient interview documented at least once during Opioid Therapy in the medical record.	American Academy of Neurology	This measure was proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
<p><b>Comment:</b> One commenter supported the removal of measures Q412 and Q414 from the Geriatrics set.</p> <p><b>Response:</b> We thank the commenter for supporting the removal of these measures.</p> <p>After consideration of public comments, we are finalizing the measures for removal from the <i>Geriatrics Specialty Measure Set</i> as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program. Also note that measure Q408: Opioid Therapy Follow-up Evaluation should have been included in the removal table for the Geriatrics set in the 2021 PFS proposed rule as it is being removed from the MIPS program.</p>								

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

Unauthorized disclosure may result in prosecution to the full extent of the law.

**B.15. Hospitalists**

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Hospitalists specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

MEASURES FINALIZED FOR ADDITION TO THE INTERNAL MEDICINE SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
*	N/A / 0104e	107	CMS161 v9	eCQM Measure Specifications	Process	Effective Clinical Care	<b>Adult Major Depressive Disorder (MDD): Suicide Risk Assessment:</b> All patient visits during which a new diagnosis of MDD or a new diagnosis of recurrent MDD was identified for patients aged 18 years and older with a suicide risk assessment completed during the visit.	Mathematica	We proposed to add this measure to the Internal Medicine specialty set. Stakeholders commented, and we agreed, that the Internal Medicine set include several quality measures that address mental health and substance use disorders. Given the high rates that patients are assessed or treated for these conditions within this specialty, they recommended the inclusion of this measure within the Internal Medicine specialty set.
* !(Care Coordination)	0576 / N/A	391	N/A	MIPS CQM Specifications	Process	Communication and Care Coordination	<b>Follow-Up After Hospitalization for Mental Illness (FUH):</b> The percentage of discharges for patients 6 years of age and older who were hospitalized for treatment of selected mental illness or intentional self-harm diagnoses and who had a follow-up visit with a mental health practitioner. Two rates are submitted: • The percentage of discharges for which the patient received follow-up within 30 days after discharge. • The percentage of discharges for which the patient received follow-up within 7 days after discharge.	National Committee for Quality Assurance	We proposed to add this measure to the Internal Medicine specialty set. Stakeholders commented, and we agreed, that the Family Medicine set include several quality measures that address mental health and substance use disorders. Given the high rates that patients are assessed or treated for these conditions within this specialty, they recommended the inclusion of this measure within the Internal Medicine specialty set.
We received no comments on the measures for proposed for addition to this specialty set; therefore, we are finalizing the measures for addition to the <i>Internal Medicine Specialty Measure Set</i> as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.									

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**B.17. Internal Medicine**

<b>PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE INTERNAL MEDICINE SET</b>								
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM M NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	333	N/A	MIPS CQMs Specifications	Efficiency	Efficiency and Cost Reduction	<b>Adult Sinusitis: Computerized Tomography (CT) for Acute Sinusitis (Overuse):</b> Percentage of patients aged 18 years and older, with a diagnosis of acute sinusitis who had a computerized tomography (CT) scan of the paranasal sinuses ordered at the time of diagnosis or received within 28 days after date of diagnosis.	American Academy of Otolaryngology - Head and Neck Surgery Foundation	This measure was proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	408	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<b>Opioid Therapy Follow-up Evaluation:</b> All patients 18 and older prescribed opiates for longer than six weeks duration who had a follow-up evaluation conducted at least every three months during Opioid Therapy documented in the medical record.	American Academy of Neurology	This measure was proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	412	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<b>Documentation of Signed Opioid Treatment Agreement:</b> All patients 18 and older prescribed opiates for longer than six weeks duration who signed an opioid treatment agreement at least once during Opioid Therapy documented in the medical record.	American Academy of Neurology	This measure was proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	414	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<b>Evaluation or Interview for Risk of Opioid Misuse:</b> All patients 18 and older prescribed opiates for longer than six weeks duration evaluated for risk of opioid misuse using a brief validated instrument (e.g. Opioid Risk Tool, Screener and Opioid Assessment for Patients with Pain, revised (SOAPP-R)) or patient interview documented at least once during Opioid Therapy in the medical record.	American Academy of Neurology	This measure was proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
After consideration of public comments as shown in Table C, we are finalizing the measures for removal from the <i>Internal Medicine Specialty Measure Set</i> as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.								

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**B.18. Interventional Radiology**

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Interventional Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

**B.19. Mental/Behavioral Health**

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Mental/Behavioral Health specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

**B.21. Neurology**

**PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE NEUROLOGY SET**

Note: In this final, we proposed the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	408	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<b>Opioid Therapy Follow-up Evaluation:</b> All patients 18 and older prescribed opiates for longer than six weeks duration who had a follow-up evaluation conducted at least every three months during Opioid Therapy documented in the medical record.	American Academy of Neurology	This measure was proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	412	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<b>Documentation of Signed Opioid Treatment Agreement:</b> All patients 18 and older prescribed opiates for longer than six weeks duration who signed an opioid treatment agreement at least once during Opioid Therapy documented in the medical record.	American Academy of Neurology	This measure was proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	414	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<b>Evaluation or Interview for Risk of Opioid Misuse:</b> All patients 18 and older prescribed opiates for longer than six weeks duration evaluated for risk of opioid misuse using a brief validated instrument (e.g. Opioid Risk Tool, Screener and Opioid Assessment for Patients with Pain, revised (SOAPP-R)) or patient interview documented at least once during Opioid Therapy in the medical record.	American Academy of Neurology	This measure was proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	435	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Patient Reported Outcome	Effective Clinical Care	<b>Quality Of Life Assessment For Patients With Primary Headache Disorders:</b> Percentage of patients with a diagnosis of primary headache disorder whose health related quality of life (HRQoL) was assessed with a tool(s) during at least two visits during the 12-month measurement period AND whose health related quality of life score stayed the same or improved.	American Academy of Neurology	This measure was proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

**Comment:** One commenter supported the removal of the three retired opioid measures, Q408, Q412, and Q414 from the Neurology set.

**Response:** We thank the commenter for supporting the removal of measures Q408, Q412, and Q414 from the Neurology set, as they are being removed from the MIPS program.

After consideration of public comments, we are finalizing the measures for removal from the *Neurology Specialty Measure Set* as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**B.22. Neurosurgical**

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Neurosurgical specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

**B.26. Ophthalmology**

MEASURES FINALIZED FOR ADDITION TO THE OPHTHALMOLOGY SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* ! (Patient Safety)	0022 / N/A	238	CMS156 v9	eCQM Specifications, MIPS CQMs Specifications	Process	Patient Safety	<b>Use of High-Risk Medications in Older Adults:</b> Percentage of patients 65 years of age and older who were ordered at least two of the same high-risk medications.	National Committee for Quality Assurance	We proposed in Table D.48 to expand the measure's applicability to include the ophthalmology patient population. With the expanded patient population and the clinical relevance to this clinician type, we proposed to add to the Ophthalmology specialty set.
We received no public comments on the measures proposed for addition to this specialty set; therefore, we are finalizing the measures for addition to the <i>Ophthalmology Specialty Measure Set</i> as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.									

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**B.27. Orthopedic Surgery**

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Orthopedic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

**PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE ORTHOPEDIC SURGERY SET**

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	408	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<b>Opioid Therapy Follow-up Evaluation:</b> All patients 18 and older prescribed opiates for longer than six weeks duration who had a follow-up evaluation conducted at least every three months during Opioid Therapy documented in the medical record.	American Academy of Neurology	This measure was proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	412	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<b>Documentation of Signed Opioid Treatment Agreement:</b> All patients 18 and older prescribed opiates for longer than six weeks duration who signed an opioid treatment agreement at least once during Opioid Therapy documented in the medical record.	American Academy of Neurology	This measure was proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.
N/A / N/A	414	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	<b>Evaluation or Interview for Risk of Opioid Misuse:</b> All patients 18 and older prescribed opiates for longer than six weeks duration evaluated for risk of opioid misuse using a brief validated instrument (e.g. Opioid Risk Tool, Screener and Opioid Assessment for Patients with Pain, revised (SOAPP-R)) or patient interview documented at least once during Opioid Therapy in the medical record.		This measure was proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

After consideration of public comments as shown in Table C, we are finalizing the measures for removal from the *Orthopedic Surgery Specialty Measure Set* as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

Unauthorized disclosure may result in prosecution to the full extent of the law.

**B.28. Otolaryngology**

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Otolaryngology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

**PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE OTOLARYNGOLOGY SET**

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM / M / NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	333	N/A	MIPS CQMs Specifications	Efficiency	Efficiency and Cost Reduction	<b>Adult Sinusitis: Computerized Tomography (CT) for Acute Sinusitis (Overuse):</b> Percentage of patients aged 18 years and older, with a diagnosis of acute sinusitis who had a computerized tomography (CT) scan of the paranasal sinuses ordered at the time of diagnosis or received within 28 days after date of diagnosis.	American Academy of Otolaryngology - Head and Neck Surgery Foundation	This measure was proposed for removal beginning with the 2023 MIPS payment year. See Table C for rationale.

After consideration of public comments as shown in Table C, we are finalizing the measures for removal from the *Otolaryngology Specialty Measure Set* as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years. Note: Where applicable, see Table C for any comments and responses pertaining to measures that were proposed for removal from the MIPS program.

**B.29. Pathology**

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Pathology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

**B.30. Pediatrics**

MEASURES FINALIZED FOR <b>ADDITION</b> TO THE PEDIATRICS SET									
Indicator	NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title And Description	Measure Steward	Rationale for Inclusion
* § ! (Appropriate Use)	0058 / N/A	116	N/A	MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	<b>Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis:</b> The percentage of episodes for patients ages 3 months and older with a diagnosis of acute bronchitis/bronchiolitis that did not result in an antibiotic dispensing event.	National Committee for Quality Assurance	We proposed in Table D.18 to expand the measure's applicability to include the pediatric patient population. With the expanded patient population and the clinical relevance to this clinician type, we proposed to add to the Pediatric specialty set.
We received no public comments on the measures proposed for addition to this specialty set; therefore, we are finalizing the measures for addition to the <i>Pediatrics Specialty Measure Set</i> as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.									

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**B.31. Physical Medicine**

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Physical Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

**B.34. Podiatry**

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Podiatry specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

**B.37. Rheumatology**

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Rheumatology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

	0236 / N/A	044	N/A	MIPS CQM Specifications	Process	Effective Clinical Care	<b>Coronary Artery Bypass Graft (CABG): Preoperative Beta-Blocker in Patients with Isolated CABG Surgery:</b> Percentage of isolated Coronary Artery Bypass Graft (CABG) surgeries for patients aged 18 years and older who received a beta-blocker within 24 hours prior to surgical incision.	Centers for Medicare & Medicaid Services	We proposed to add this measure to the Thoracic Surgery set as it is clinically relevant to this clinician type. This set includes additional CABG quality measures and inclusion of this measure would allow for a complete assessment of quality for this surgical procedure.
We received no public comments on the measures proposed for addition to this specialty set; therefore, we are finalizing the measures for addition to the <i>Thoracic Surgery Specialty Measure Set</i> as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.

**B.41. Urgent Care**

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Urgent Care specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable.

## **TABLE Group C: Previously Finalized Quality Measures Finalized for Removal in the 2023 MIPS Payment Year and Future Years**

In this final rule, we are removing 11 previously finalized quality measures from the MIPS Program for the 2021 MIPS performance period/2023 MIPS payment year and future years. These measures are discussed in detail below. Our measure removal criteria was discussed in the CY 2019 PFS final rule (83 FR 59763 through 59765).

Further considerations are given in the evaluation of the measure's performance data, to determine whether there is or no longer is variation in performance. As discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763), additional criteria that we use for the removal of measures also includes extremely topped out measures, which means measures that are topped out with an average (mean) performance rate between 98-100 percent. Beginning with the 2020 MIPS performance period/2022 MIPS payment year, we also refer readers to the CY 2020 PFS final rule (84 FR 62957 through 62959) for additional quality measure removal criteria.

**NOTE:** Since publication of the measures in Table C in CY 2021 PFS proposed rule, we have determined the following measures will be retained in the 2021 MIPS performance period/2023 MIPS payment year: Q024, Q048 (MIPS CQMs Specifications collection type only), and Q337. As such, these measures have been removed from Table C and integrated back into the relevant previously finalized measure sets under Table B in this final rule. Our decisions not to finalize these measures for removal in this final rule are detailed in our responses to the public comments for these measures in Table Group C.

### **INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**TABLE Group C: Previously Finalized Quality Measures Finalized and Not Finalized for Removal in the 2023 MIPS Payment Year and Future Years**

**C.1. Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older**

Category	Description
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality #:</b>	024
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Collection Type:</b>	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
<b>Measure Description:</b>	Percentage of patients aged 50 years and older treated for a fracture with documentation of communication, between the physician treating the fracture and the physician or other clinician managing the patient’s on-going care, that a fracture occurred and that the patient was or should be considered for osteoporosis treatment or testing. This measure is submitted by the physician who treats the fracture and who therefore is held accountable for the communication.
<b>Measure Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale for Removal</b>	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because the measure supports communication between the physician treating the fracture and the clinician managing the patient’s on-going care, but does not ensure that the patient receives the appropriate treatment or testing for osteoporosis. We believe measure Q418: Osteoporosis Management in Women Who Had a Fracture represents a more robust quality outcome in the management of patients with osteoporosis who experience a fracture since the clinical focus of this measure is the care of the patient rather than just the communication of the care plan for on-going post fracture care.
<b>In the Circumstance the Measure is Retained</b>	There are no substantive changes or specialty set movement finalized for this measure.
<p><b>Comment:</b> One commenter opposed the removal of measure Q024, stating that it does not believe this measure is duplicative of measure Q418 as that measure only focuses on women, and not the entire population of possible concern. While the commenter appreciated the measure is a process measure that does not address appropriate treatment or testing, this measure captures an important aspect of care continuity for a large proportion of Medicare beneficiaries with fractures that is not addressed in any other MIPS quality measures.</p> <p><b>Response:</b> We agree that treatment of osteoporosis is important, however, measure Q024 does not ensure treatment of the patient only that the fracture was communicated to the clinician managing the patient’s on-going care. Measure Q418 is more robust in that it requires a bone mineral density test or pharmacologic therapy. After careful consideration, we will maintain this measure for consistency and stability as it is not topped out and still in alignment with guidelines, but may consider removal in the future.</p> <p>After consideration of public comments, we are not finalizing the removal of measure Q024 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**C.2. Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older**

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	048
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the meaningful measures initiative. This is a process measure that only requires an assessment for the presence or absence of urinary incontinence, which by itself may not have a meaningful direct impact on patient care as the screening itself does not indicate a plan of care was implemented. Additionally, the Medicare Part B Claims Measure Specifications collection type has reached the end of the topped out lifecycle (82 53640).
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement finalized for this measure.
<p><b>Comment:</b> One commenter opposed removal of measure Q048, stating that according to the Women's Preventive Services Initiative, screening for urinary incontinence is important as this condition is underdiagnosed and undertreated in the United States. This practice screens for urinary incontinence in order to provide the appropriate diagnosis and ultimately the plan of care, and screens all women over 65 as it is clinically relevant for its practice.</p> <p><b>Response:</b> While we agree that this is an important concept, the measure for assessment alone is low-bar and may not drive quality outcomes meaning completion of a screening does not indicate appropriate treatment was provided to the patient. We believe that measure Q050 allows clinicians to support patients screened positive for urinary incontinence and support the needs of these patients with quality being captured upon providing the patient with a plan of care. After careful consideration, we will maintain the MIPS CQMs Specifications collection type for consistency and stability as it is not topped out and still in alignment with guidelines, but may consider removal in the future. The Medicare Part B Claims Measure Specifications collection type has reached the end of the topped out life cycle, which does not allow meaningful benchmarks to be established. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped out status would limit the score awarded per the 2020 Benchmark File.</p> <p><b>Comment:</b> Two commenters opposed removal of measure Q048 from the MIPS program and therefore the Obstetrics/Gynecology and Geriatrics specialty sets because evaluation of incontinence is an important initial evaluative process for female patients 65 or older. While sensible to remove the measure due to the topped out status, it seems reasonable to consider modification to transition this measure to an outcomes measure. The commenter received requests to delay removing this measure until MVPs are implemented and because many TINs using this measure are short of their required six measures for MIPS reporting.</p> <p><b>Response:</b> Measure Q048 does not require a quality action (follow up, plan of care, etc.) that links to improved outcomes. The measure does not assess a clinical outcome nor one of the defined MIPS high priority areas. Measure Q050 is a more robust measure that requires a quality action (plan of care) for the appropriate patient population screened and diagnosed with urinary incontinence. We would encourage the commenter to collaborate with the measure to expand the population of Q050 to include all women to be screened for urinary incontinence and if positive, develop a plan of care to create a single comprehensive quality measure. After careful consideration, we will maintain the MIPS CQMs Specifications collection type for consistency and stability as it is not topped out and still in alignment with guidelines, but may consider removal in the future. The Medicare Part B Claims Measure Specifications collection type has reached the end of the topped out life cycle, which does not allow meaningful benchmarks to be established. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped out status would limit the score awarded per the 2020 Benchmark File.</p> <p>After consideration of public comments, we are finalizing the removal of measure Q048 as indicated for the 2021 MIPS performance period/2023 MIPS payment year and future years for the Medicare Part B Claims Specifications collection type only (see Table D.113). Measure Q048 will remain in the MIPS program for 2021 for the MIPS CQMs Specifications collection type.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**C.3. Hematology: Multiple Myeloma: Treatment with Bisphosphonates**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality #:</b>	069
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Collection Type:</b>	MIPS CQMs Specifications
<b>Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of multiple myeloma, not in remission, who were prescribed or received intravenous bisphosphonate therapy within the 12-month reporting period.
<b>Measure Steward:</b>	American Society of Hematology
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale for Removal</b>	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because the measure does not align with current treatment guidelines and could inadvertently penalize eligible clinicians who are treating patients appropriately (i.e., Prolia), by excluding those patients instead of being numerator compliant. As currently constructed, the measure may produce misleading results.
<b>In the Circumstance the Measure is Retained</b>	There are no substantive changes or specialty set movement finalized for this measure.
<p><b>Comment:</b> One commenter was supportive of removing measure Q069 from the MIPS program.</p> <p><b>Response:</b> We thank the commenter for supporting the removal of this measure.</p> <p>After consideration of public comments, we are finalizing the removal of measure Q069 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**C.4. Radiology: Inappropriate Use of “Probably Benign” Assessment Category in Screening Mammograms**

Category	Description
NQF # / eCQM NQF #:	0508 / N/A
Quality #:	146
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of final reports for screening mammograms that are classified as “probably benign”.
Measure Steward:	American College of Radiology
High Priority Measure:	Yes
Measure Type:	Process
<b>Rationale for Removal</b>	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it is considered a standard of care that has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this inverse measure is 0.428 percent for the MIPS CQMs Specifications collection type and 0.253 percent for the Medicare Part B Claims Measure Specifications collection type. For an inverse measure, a lower calculated performance rate indicates better clinical care or control. As such, the MIPS CQMs Specifications collection type and the Medicare Part B Claims Measure Specifications collection type are considered extremely topped out. The average performance rate is based on the current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/824/2020%20MIPS%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/824/2020%20MIPS%20Quality%20Benchmarks.zip</a>
<b>In the Circumstance the Measure is Retained</b>	There are no substantive changes or specialty set movement finalized for this measure.
<p><b>Comment:</b> One commenter did not support the removal of measure Q146 since reporting difficulties created by the COVID-19 pandemic may limit relevancy of some measures due to reduced services provided. The use of performance period benchmarks for the 2021 performance year introduces uncertainty in measure selection. The removal of this measure would also limit the pool of measures available for breast imagers, and many groups carve out mammography services into separate TINs, thus group reporting does not broaden the list of available measures for these specialists. In addition, the measure could be useful as part of a measure set for a breast imaging MVP. A second commenter urged CMS to temporarily halt the removal of topped out measures for the 2021 performance year to provide clinicians with consistency as they recover from the COVID-19 PHE, particularly those that may be aligned with future MVPs. A third commenter said removal of this measure would limit the number of measures for radiologists and wanted this topped out measure to remain. A fourth commenter acknowledged the topped out data but suggested retaining the measure with an increase in the data completeness threshold to 90-95 percent since there have been no new radiology measures since 2017. A fifth commenter recommended maintaining the existing MIPS quality measures to ensure consistency, reduce a burden, and allow options in the future for MVPs.</p> <p><b>Response:</b> While we acknowledge the hardships faced due to the COVID-19 PHE and the specializations found within diagnostic radiation, the performance for measure Q146 has an extremely high and unvarying performance rate. This does not allow meaningful benchmarks to be established. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure’s topped out status would limit the score awarded per the 2020 Benchmark File. The policy for data completeness is established for all measures and is not varied between measures. We encourage the commenter to reach out to measure developers/stewards to develop new outcome/high-priority measures for submission to the Call for Measures for possible future implementation. We understand that ensuring there are measure available for future use in MVPs is important, however, we strive to ensure that all measures align with the Meaningful Measures Initiative, including removal of measures that are extremely topped out.</p> <p>After consideration of public comments, we are finalizing the removal of measure Q146 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**C.5. Adult Sinusitis: Computerized Tomography (CT) for Acute Sinusitis (Overuse)**

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	333
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 18 years and older, with a diagnosis of acute sinusitis who had a computerized tomography (CT) scan of the paranasal sinuses ordered at the time of diagnosis or received within 28 days after date of diagnosis.
Measure Steward:	American Academy of Otolaryngology – Head and Neck Surgery Foundation
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure has reached the end of the topped out lifecycle and has a high performance rate of 2.834 percent for the MIPS CQMs Specifications collection type. For an inverse measure, a lower calculated performance rate indicates better clinical care or control. Given this measure’s continued topped out status, we believe it has a limited opportunity to improve clinical outcomes. The average performance rate is based on the current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/824/2020%20MIPS%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/824/2020%20MIPS%20Quality%20Benchmarks.zip</a>
In the Circumstance the Measure is Retained	We proposed to update the denominator eligible encounters to include telehealth encounters as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.
<p><b>Comment:</b> One commenter opposed removal of measure Q333, stating that while performance on this measure has historically been high, it is still possible to further improve clinical outcomes. Patients who undergo CT scans are exposed to radiation, which is correlated with an increased risk of cancer. This measure disincentivizes CT scans when diagnosing uncomplicated cases of adult sinusitis, which leads to better clinical outcomes. Removing this measure also reduces wasteful spending incurred by ordering CT scans.</p> <p>A second commenter stated that the removal of measure Q333 would impact the Emergency Medicine and Urgent Care sets. The commenter recognizes that it is not necessarily productive to keep measures that have demonstrated consistently high performance over time. At the same time, measure removal policies limiting the number of measures available to emergency medicine impact the ability of emergency medicine physicians to participate in the MIPS program. The commenter indicated that CMS must adopt a process that allows specialties to more rapidly test and replace obsolete measures. CMS should also work with clinical experts to consider ways to encourage the long-term tracking of topped out measures and allow for the reintroduction of previously topped out measures if a performance gap is later identified.</p> <p>A third commenter urged CMS to temporarily halt the removal of topped out measures for the 2021 performance year to provide clinicians with consistency as they recover from the COVID-19 PHE, particularly those that may be aligned with future MVPs. A fourth commenter recommended maintaining the existing MIPS quality measures to ensure consistency, reduce a burden, and allow options in the future for MVPs. A fifth commenter requested that CMS consider extending the life of this measure with an updated denominator that adds telehealth as an eligible encounter, and the commenter also thought this would be an excellent measure to include in a future MVP.</p> <p><b>Response:</b> We agree that this is an important concept and we can appreciate the difficulties of the COVID-19 PHE. We understand that ensuring there are measures available for future use in MVPs is important, however, we strive to ensure that all measures align with the Meaningful Measures Initiative, including the removal of measures that are at the end of the topped out lifecycle. Additionally, by removing measures at the end of the topped out lifecycle, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure’s topped out status would limit the score awarded per the 2020 Benchmark File. The policy for data completeness is established for all measures and is not varied between measures. We appreciate the comment regarding inclusion of telehealth as an eligible encounter of the measure and encourage the commenter to communicate their request to the measure steward for consideration in future years.</p> <p>We ensure there is an annual review of quality measures with measure stewards to ensure we maintain measures that reflect meaningful measurement. We believe that measures that are submitted to Call for Measures, vetted by CMS, and reviewed by Measure Applicability Partnership ensure that included MIPS measures are robust and fulfill our goal of incorporating meaningful measurement.</p> <p>After consideration of public comments, we are finalizing the removal of measure Q333 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**C.6. Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality #:</b>	337
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Collection Type:</b>	MIPS CQMs Specifications
<b>Measure Description:</b>	Percentage of patients, regardless of age, with psoriasis, psoriatic arthritis and/or rheumatoid arthritis on a biological immune response modifier whose providers are ensuring active tuberculosis prevention either through negative standard tuberculosis screening tests or are reviewing the patient’s history to determine if they have had appropriate management for a recent or prior positive test.
<b>Measure Steward:</b>	American Academy of Dermatology
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale for Removal</b>	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure is duplicative to measure Q176: Rheumatoid Arthritis (RA): Tuberculosis Screening because we are proposing in Table D.33 substantive changes to measure Q176 that would broaden the denominator by removing the disease specificity criteria. Therefore, the patient population will overlap between these measures; however, measure Q176 has a broader eligible patient population. In the event the proposed substantive change to measure Q176 was not finalized, we considered maintaining this measure to ensure this patient population is being assessed for appropriate tuberculosis screening.
<b>In the Circumstance the Measure is Retained</b>	There are no substantive changes or specialty set movement finalized for this measure.
<p><b>Comment:</b> One specialty dermatology practice said it does not have a broad selection of measures to choose from and opposed the removal of measure Q337, stating that the measure is not duplicative to measure Q176. The practice does not diagnosis rheumatoid arthritis, and there is no mention of psoriasis in measure Q176. The commenter suggested that psoriasis be added to measure Q176, or as an alternative, that measure Q176 be eliminated instead since rheumatoid arthritis is mentioned in measure Q337.</p> <p>A second commenter opposed the removal of measure Q337, citing that the rationale for removal is the proposed substantive changes under Table D.33 to measure Q176, where the measure population would then overlap with measure Q337. However, if changes to measure Q176 are not finalized, measure Q337 would be retained. The commenter stated that the revision to measure Q176 does not sufficiently cover the patients that dermatologist treat or the medications that are used, as are currently reported under measure Q337. See comments under Table D.33 for further recommendations from this commenter.</p> <p><b>Response:</b> We proposed a substantive change to measure Q176 in Table D.33 to broaden the denominator by removing the disease specificity criteria. The denominator will now include all patients aged 18 years and older receiving their first course of therapy using a biologic DMARD, regardless of diagnosis. We encourage the commenter to reach out to the measure stewards for measures Q176 and/or Q337 to discuss revisions for possible implementation of a single all-encompassing measure in future years. However, we agree the changes to measure Q176 do not adequately cover all dermatologic medications seen within measure Q337. For this reason, we will maintain measure Q337 for PY2021.</p> <p>After consideration of public comments, we are not finalizing the removal of measure Q337 as indicated for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**C.7. Implantable Cardioverter-Defibrillator (ICD) Complications Rate**

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	348
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Collection Type:	MIPS CQMs Specifications
Measure Description:	Patients with physician-specific risk-standardized rates of procedural complications following the first time implantation of an ICD.
Measure Steward:	American College of Cardiology Foundation
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the meaningful measures initiative. The limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement. The limited adoption over multiple performance periods suggests this is not an important clinical topic for MIPS eligible clinicians.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement finalized for this measure.
<p><b>Comment:</b> One commenter opposed removal of measure Q348, citing the removal rationale that there is limited patient population and adoption of the quality measure does not allow for the creation of benchmarks. The commenter indicated that MIPS policies prevent this measure from being used, such as scoring policies that cap the number of performance achievement points that can be earned on measures that lack a benchmark. It also leaves cardiac electrophysiology with only two relevant measures to report and discourages specialty societies from developing new MIPS measures. The commenter discouraged the removal of highly specialized measures that fill an important clinical gap.</p> <p><b>Response:</b> We would encourage the commenter to submit comments regarding the MIPS scoring policies. As shown by the continued low adoption rates, measure Q348 is not being implemented by clinicians and a meaningful benchmark cannot be created, meaning this measure is not driving quality care and positive outcomes and is not in alignment with the Meaningful Measure Initiative. Removal allows eligible clinicians to maximize their potential quality performance score as this measure’s inability to create a benchmark would limit the score awarded per the 2020 Benchmark File.</p> <p>After consideration of public comments, we are finalizing the removal of measure Q348 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>

**C.8. Hepatitis C: Discussion and Shared Decision Making Surrounding Treatment Options**

Category	Description
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality #:</b>	390
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Person and Caregiver-Centered Experience and Outcomes
<b>Collection Type:</b>	MIPS CQMs Specifications
<b>Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of hepatitis C with whom a physician or other qualified healthcare professional reviewed the range of treatment options appropriate to their genotype and demonstrated a shared decision making approach with the patient. To meet the measure, there must be documentation in the patient record of a discussion between the physician or other qualified healthcare professional and the patient that includes all of the following: treatment choices appropriate to genotype, risks and benefits, evidence of effectiveness, and patient preferences toward treatment.
<b>Measure Steward:</b>	American Gastroenterological Association
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale for Removal</b>	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program at the request of the measure steward because this measure does not align with the advancements in hepatitis C treatments. There are now curative treatments over an 8-12-week period with few side effects. Additionally, the measure is at risk of capturing “chronic HCV” patients who are no longer viremic, which would not necessitate HCV shared decision making.
<b>In the Circumstance the Measure is Retained</b>	There are no substantive changes or specialty set movement finalized for this measure.
<p><b>Comment:</b> One commenter supported the removal of measure Q390 from the MIPS program.</p> <p><b>Response:</b> We thank the commenter for supporting the removal of measure Q390.</p> <p>After consideration of public comments, we are finalizing the removal of measure Q390 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**C.9.Opioid Therapy Follow-up Evaluation**

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	408
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	MIPS CQMs Specifications
Measure Description:	All patients 18 and older prescribed opiates for longer than six weeks duration who had a follow-up evaluation conducted at least every three months during Opioid Therapy documented in the medical record.
Measure Steward:	American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program at the request of the measure steward because this measure does not align with the most recent guidelines. The measure steward will not be further reviewing or updating the measure specifications, citing the measure is topped out and there are newer opioid measures to report that are not topped out.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement finalized for this measure.
<p><b>Comment:</b> One commenter opposed removal of measure Q408, stating that opioid treatment agreements ensure that patients have important information regarding potential risks, benefits, and expectations for patient responsibility before using these medications. It is important that clinicians regularly engage patients during opioid treatment, and there are no other measures to achieve this goal. Providers need to continue to educate and follow up with patients regarding their opioid regimens to help combat the opioid crisis. The commenter recommended that this measure be developed further in future rulemaking to include robust evaluation methods.</p> <p>Several commenters opposed the removal of measure Q408 and stated that following discussion with the measure steward, there are not newer opioid measures to replace the three measures proposed for removal: Q408, Q412, and Q414. The commenters did not agree that these measures do not align with the most recent guidelines and that the measures related to relevant clinical quality activities. Also, without a pain management specialty measure set it is an administrative burden, as there are not an adequate number of quality measures that apply to the specialty of pain management. A commenter cautioned against actions that may limit the current list of quality measures addressing opioid misuse and related issues. Opioid misuse, and substance use disorders more broadly, have become more prevalent during the COVID-19 PHE. CMS must consider additional quality measures that address opioid misuse and related issues to help acknowledge the invaluable work of physicians in addressing such issues among the most vulnerable Medicare beneficiaries.</p> <p><b>Response:</b> We thank the commenters for their comments opposing the removal of measure Q408. We agree that this is an important topic and would encourage the commenter to reach out to measure developers to collaborate/work towards a more comprehensive measure with robust evaluation methods for future consideration for implementation into MIPS. The measure steward believed the measure was no longer aligned with current guidelines and is currently topped out. Given the measure steward is no longer supporting the measure, we are unable to continue implementation within MIPS.</p> <p>After consideration of public comments, we are finalizing the removal of measure Q408 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

**C.10.Documentation of Signed Opioid Treatment Agreement**

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	412
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	MIPS CQMs Specifications
Measure Description:	All patients 18 and older prescribed opiates for longer than six weeks duration who signed an opioid treatment agreement at least once during Opioid Therapy documented in the medical record.
Measure Steward:	American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program at the request of the measure steward because this measure does not align with the most recent guidelines. The measure steward will not be further reviewing or updating the measure specifications, citing the measure is topped out and there are newer opioid measures to report that are not topped out.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement finalized for this measure.
<p><b>Comment:</b> One commenter supported the removal of retired measure Q412 from the MIPS program. as indicated in comments on the Neurology and Geriatrics sets..</p> <p><b>Response:</b> We thank the commenter for supporting the removal of measure Q412.</p> <p><b>Comment:</b> One commenter opposed removal of measure Q412, stating that opioid treatment agreements ensure that patients have important information regarding potential risks, benefits, and expectations for patient responsibility before using these medications. There are no other measures to achieve this goal. The commenter recommended that this measure be further developed in future rulemaking to include robust evaluation methods.</p> <p>Several commenters opposed the removal of measure Q412 and stated that following discussion with the measure steward, there are not newer opioid measures to replace the three measures proposed for removal: Q408, Q412, and Q414. **C.11.Evaluation or Interview for Risk of Opioid Misuse**

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	414
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	MIPS CQMs Specifications
Measure Description:	All patients 18 and older prescribed opiates for longer than six weeks duration evaluated for risk of opioid misuse using a brief validated instrument (e.g. Opioid Risk Tool, Screener and Opioid Assessment for Patients with Pain, revised (SOAPP-R)) or patient interview documented at least once during Opioid Therapy in the medical record.
Measure Steward:	American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program at the request of the measure steward because this measure does not align with the most recent guidelines. The measure steward will not be further reviewing or updating the measure specifications, citing the measure is topped out and there are newer opioid measures to report that are not topped out.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement finalized for this measure.
<p><b>Comment:</b> One commenter supported the removal of retired measure Q414 as indicated in comments on the Neurology and Geriatrics sets. A second commenter was supportive of the proposal to remove 14 quality measures that do not add value to the quality of care, and instead add more meaningful measurements.</p> <p><b>Response:</b> We thank the commenters for supporting the removal of measure Q414.</p> <p><b>Comment:</b> Several commenters opposed the removal of measure Q414 and stated that following discussion with the measure steward, there are not newer opioid measures to replace the three measures proposed for removal: Q408, Q412, and Q414. The commenters did not agree that these measures do not align with the most recent guidelines and that the measures related to relevant clinical quality activities. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**C.12. Quality of Life Assessment for Patients With Primary Headache Disorders**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality #:</b>	435
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Collection Type:</b>	Medicare Part B Claims Specifications, MIPS CQMs Specifications
<b>Measure Description:</b>	Percentage of patients with a diagnosis of primary headache disorder whose health related quality of life (HRQoL) was assessed with a tool(s) during at least two visits during the 12-month measurement period AND whose health related quality of life score stayed the same or improved.
<b>Measure Steward:</b>	American Academy of Neurology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Patient Reported Outcome
<b>Rationale for Removal</b>	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program at the measure steward's request as it is no longer being maintained for inclusion. As there are various tools that providers may choose to use, it difficult to compare measure performance across MIPS eligible clinicians. Additionally, the scores are difficult to capture within the EHR leading to difficulties in determining whether the QoL is being maintained or improving over time.
<b>In the Circumstance the Measure is Retained</b>	There are no substantive changes or specialty set movement finalized for this measure.
We received no public comments on the removal of this measure; therefore, we are finalizing the removal of measure Q435 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**C.13. Rate of Surgical Conversion from Lower Extremity Endovascular Revascularization Procedure**

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	437
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Collection Type:	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
Measure Description:	Inpatients assigned to endovascular treatment for obstructive arterial disease, the percent of patients who undergo unplanned major amputation or surgical bypass within 48 hours of the index procedure.
Measure Steward:	Society of Interventional Radiology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale for Removal	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it is considered a standard of care that has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this inverse measure is 1.854 percent for the MIPS CQMs Specifications collection type and 1.031 percent for the Medicare Part B Claims Measure Specifications collection type. For an inverse measure, a lower calculated performance rate indicates better clinical care or control. As such, the MIPS CQMs Specifications collection type and the Medicare Part B Claims Measure Specifications collection type are considered extremely topped out. The average performance rate is based on the current MIPS benchmarking data located at <a href="https://qpp-cm-prod-content.s3.amazonaws.com/uploads/824/2020%20MIPS%20Quality%20Benchmarks.zip">https://qpp-cm-prod-content.s3.amazonaws.com/uploads/824/2020%20MIPS%20Quality%20Benchmarks.zip</a>
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement finalized for this measure.
Comment:	One commenter did not support the removal of measure Q437 since reporting difficulties created by the COVID-19 pandemic may limit relevancy of some measures due to reduced services provided. The use of performance period benchmarks for the 2021 performance year introduces uncertainty in measure selection. The removal of this measure would also limit the pool of measures available for radiologists. A second commenter urged CMS to temporarily halt the removal of topped out measures for the 2021 performance year to provide clinicians with consistency as they recover from the COVID-19 PHE, particularly those that may be aligned with future MVPs. A third commenter said removal of this measure would limit the number of measures for radiologists and wanted this topped out measure to remain.
Response:	While we acknowledge the hardships faced due to the COVID-19 PHE and the specializations found within radiology the performance for measure Q437 has an extremely high and unvarying performance rate. This does not allow meaningful benchmarks to be established. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped out status would limit the score awarded per the 2020 Benchmark File.
	After consideration of public comments, we are finalizing the removal of measure Q437 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**C.14. All-Cause Hospital Readmission**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	1789 / N/A
<b>Quality #:</b>	458
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Collection Type:</b>	Administrative Claims
<b>Measure Description:</b>	The 30-day All-Cause Hospital Readmission measure is a risk-standardized readmission rate for beneficiaries age 65 or older who were hospitalized at a short-stay acute care hospital and experienced an unplanned readmission for any cause to an acute care hospital within 30 days of discharge.
<b>Measure Steward:</b>	Yale University
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Outcome
<b>Rationale for Removal</b>	We proposed the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it is duplicative to the new measure being proposed in Table A.1. for the 2021 performance period: Table A.1: Hospital-Wide, 30-Day, All-Cause Unplanned Readmission (HWR) Rate for the Merit-Based Incentive Payment Program (MIPS) Eligible Clinician Groups. This proposed new measure is a re-specification of the hospital-level measure and promotes a systems level approach by clinicians, making it a more applicable measure to MIPS eligible clinicians. In the event we did not finalize the proposed new measure: Hospital-Wide, 30-Day, All-Cause Unplanned Readmission (HWR) Rate for the Merit-Based Incentive Payment Program (MIPS) Eligible Clinician Groups, we would have maintained this current measure Q458: All-Cause Hospital Readmission.
<b>In the Circumstance the Measure is Retained</b>	There are no substantive changes or specialty set movement finalized for this measure.
We received no public comments on this measure proposed for removal; therefore, we are finalizing the removal of measure Q458 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years	
Comments citing measure Q458, due to the replacement of this measure with new measure Q479, Hospital-Wide, 30-Day, All-Cause Unplanned Readmission (HWR) Rate for the Merit-Based Incentive Payment System (MIPS) Groups, are addressed under Table A.1.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**TABLE Group D: Previously Finalized Quality Measures with Substantive Changes  
Finalized and Not Finalized for the 2023 MIPS Payment Year and Future Years**

NOTE: Electronic Clinical Quality Measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table D as follows: NQF # / eCQM NQF #.

The D Tables within this final rule provide the substantive changes finalized for the quality measures in CY 2021. The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2021 may not be identified within the NPRM due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2021 CPT and ICD-10 updates and assessment of these codes inclusion by the Measure Steward, these changes may be postponed until CY 2022. The 2021 Quality Measure Release Notes provide a comprehensive, detailed reference of exact codes changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the Quality Payment Program Resource Library at [https://qpp.cms.gov/about/resource-library\\_under\\_the\\_measure\\_specifications](https://qpp.cms.gov/about/resource-library_under_the_measure_specifications). For eCQM Release Notes, see the eCQI Resource Center at <https://ecqi.healthit.gov/ep-ec?globalyearfilter=2020>.

In addition to the finalized substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature but we believe are important to communicate to stakeholders. These changes align with the scope of the current coding, however, this will expand or contract the current eligible population, therefore, review the current year measure specification and the 2021 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes. Language has also been added, to all applicable 2021 quality measure specifications, in the form of an 'Instructions Note', to clarify that telehealth encounters are allowed for determination of denominator eligibility. Only in the instance telehealth encounters have not been previously allowed as denominator eligible, will the D table corresponding to that measure reflect an update to the denominator allowing for telehealth encounters in the 'Substantive Change' cell.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.1 Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0059 / N/A
<b>Quality#:</b>	001
<b>CMS eCQM ID:</b>	CMS122v9
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period.
<b>Substantive Change:</b>	<p><b>Modified collection type:</b> Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications.</p> <p><b>Updated denominator exclusion: For the eCQM Specification collection type:</b> Revised: Exclude patients 66 and older who are living long term in an institution for more than 90 consecutive days during the measurement period.</p> <p><b>Updated denominator exclusion logic: For the eCQM Specifications collection type:</b> Updated encounters so they are "on or" before the end of the measurement period. Updated the LTI exclusion to be 90 consecutive days. Changed the name of the under 81 exclusion definition to "FrailtyLTI.Advanced Illness and Frailty Exclusion Not Including Over Age 80".</p> <p><b>Updated denominator exclusion: For Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications collection types:</b> Revised: Patients age 66 and older in Institutional Special Needs Plans (SNP) or residing in long-term care with a POS code 32, 33, 34, 54 or 56 for more than 90 consecutive days during the measurement period.</p> <p><b>Updated denominator exclusion: For the MIPS CQMs Specifications and Medicare Part B Claims Measure Specification collection type:</b> Added coding to identify patients with advanced illness and frailty</p> <p><b>Updated numerator options: For the MIPS CQM Specifications and Medicare Part B Claims Measure Specifications collection type:</b> Stratified the Performance Not Met numerator option into three:  <b>Performance Not Met:</b> Most recent hemoglobin A1c (HbA1c) level &lt; 7.0%  <b>Performance Not Met:</b> Most recent hemoglobin A1c (HbA1c) level greater than or equal to 7.0% and less than 8.0%  <b>Performance Not Met:</b> Most recent hemoglobin A1c (HbA1c) level greater than or equal to 8.0% and less than or equal to 9.0%</p> <p><b>Updated numerator instructions: For the MIPS CQM Specifications and Medicare Part B Claims Measure Specifications collection type:</b> Added: Do not include HbA1c levels reported by the patient. Added: Only patients with a diagnosis of Type 1 or Type 2 diabetes should be included in the denominator of this measure; patients with a diagnosis of secondary diabetes due to another condition should not be included.</p>
<b>Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Intermediate Outcome
<b>Rationale:</b>	<p>We proposed to update the denominator exclusion language and logic to clarify that, for the measure, long-term care will be defined as patients staying 90 consecutive days at the long-term care facility versus any 90 days within the performance period.</p> <p>Additionally, for the MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection types, we proposed adding applicable coding to better define the advanced illness and frailty patient population for the purposes of this measure. The numerator options for Performance Not Met were stratified to have the ability to better assess hemoglobin A1c levels within the patient population that showed better control. Instructions have been added to ensure the correct patient population as the measure intent is to assess hemoglobin A1c control in Type 1 or Type 2 diabetics and not those patients who have diabetes due to another condition.</p> <p>We proposed to remove the CMS Web Interface Measure Specifications collection type. This collection type was proposed to be sunset for the purposes of MIPS starting with the 2021 performance year. We have determined it is not fiscally viable, feasible, or sustainable for MIPS to continue this collection type/submission type due to an 80 percent reduction and a continued decrease in interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures. For further rationale, please see section IV.A.3.c.(1)(c) of this final rule.</p>
<b>Comment:</b>	<p>One commenter opposed the proposed changes to the numerator for measure Q001. The removal of patient-reported HbA1cs could increase unnecessary testing for measure compliance. In addition, further clarification on acceptable sources is necessary.</p> <p>Two commenters did not agree with the proposal to add a third level of stratification to the "Performance Not Met" numerator option <i>only for the manual MIPS CQM and Medicare Part B Claims collection types</i>. The commenters stated that by dividing the latter option into two – Most recent hemoglobin A1c (HbA1c) level greater than or equal to 7.0 percent and less than 8.0 percent; and Most recent hemoglobin A1c (HbA1c) level greater than or equal to 8.0 percent and less than or equal to 9.0 percent, CMS is creating additional burden and additional time required to report for administrative staff, particularly those in small and rural practices without an EHR. The commenter is concerned that CMS is making this measure more difficult to complete and report, but only for manual collection types. This creates burden for small and rural practices. In addition, ophthalmology practices have seen a significant reduction in visits due to COVID-19. The commenter urged CMS not to finalize either of these changes. A second commenter stated that having new stratifications means that CMS may not have sufficient data to establish reliable benchmark for this measure for each stratification. In addition, given the fact that CMS proposed to keep this measure in the APP quality measure list, we believe that CMS should keep the measures as are to reduce any further complication already caused by the transition from the</p>

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

Category	Description
	<p>current MIPS APM reporting standard to APP reporting. If CMS finalizes this measure with 3 stratifications, the commenter asked that CMS clarify which stratification will be pay-for performance and which will be pay-for reporting measure, and that CMS identify the benchmark for the pay-for performance stratification early in the performance year.</p> <p><b>Response:</b> While we understand the desire to ensure there is not unnecessary testing, the measure only requires the assessment of one hemoglobin A1c measurement each performance period and it is important to ensure accurate results are documented. The measure steward believes, and we agree, that it is important to have a more granular picture of hemoglobin A1c levels to ascertain the level of control currently being achieved as diabetes is a leading cause of death in the United States. Additionally, there is ongoing discussions regarding acceptable levels of hemoglobin A1c, it is important to obtain this granular information to continue these discussions and drive quality outcomes. With regard to the benchmark, all ‘performance not met’ numerator options will be combined and removed from the performance rate calculation. The addition of these stratifications will have no bearing on the ability to create a reliable benchmark for the measure. We encourage the commenter to communicate this request to the measure steward for consideration in future years.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q001 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years with the exception of the CMS Web Interface Specifications collection type. At § 414.1305, we proposed to modify the definition of the terms collection type and submission type by removing the CMS Web Interface Specifications as an available option starting with the 2023 payment year (85 FR 50290); however, the CMS Web Interface Measure Specifications collection type will be an available option for an extension of one additional year (2021 MIPS performance period/2023 MIPS payment year) and will be removed as a collection and submission type starting with the 2022 MIPS performance period/2024 MIPS payment year. None of the substantive changes above will be applied to the CMS Web Interface Measure Specifications for the 2021 MIPS performance period. The CMS Web Interface Specifications for the 2021 MIPS performance period will reflect the 2020 CMS Web Interface Specifications.</p>

**D.2 Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Nepriylsin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD)**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0081 / 0081e
<b>Quality#:</b>	005
<b>CMS eCQM ID:</b>	CMS135v9
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	eCQM Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed ACE inhibitor or ARB or ARNI therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.
<b>Substantive Change:</b>	<b>Updated the denominator exception logic: For the eCQM Specifications collection type:</b> Added sacubitril in the Allergy/Intolerance logic. <b>Updated denominator: For all collection types:</b> Submission Criteria 1: Added telehealth as eligible for all encounters.
<b>Steward:</b>	
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to include sacubitril in the Allergy/Intolerance logic as this is one of the components of ARNI and an allergy to this ingredient would be a clinically appropriate reason for allowing a denominator exception for this patient population. We proposed to add telehealth encounters as denominator eligible for submission criteria 1 as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.
<b>Comment:</b> Several commenters supported the addition of telehealth reporting for measure Q005.	
<b>Response:</b> We thank the commenters for supporting the addition of telehealth reporting for this measure.  After consideration of public comments, we are finalizing the changes to measure Q005 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years with the exception of additional telehealth encounter eligibility for eCQM Specifications collection type as this is already in the current measure.

**D.3 Coronary Artery Disease (CAD): Antiplatelet Therapy**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0067 / N/A
<b>Quality#:</b>	006
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease (CAD) seen within a 12-month period who were prescribed aspirin or clopidogrel.
<b>Substantive Change:</b>	<b>Updated denominator:</b> Added telehealth as eligible encounter.
<b>Steward:</b>	American Heart Association
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.
<b>Comment:</b> One commenter supported the addition of telehealth reporting for measure Q006.	
<b>Response:</b> We thank the commenter for supporting the addition of telehealth reporting for this measure.	
After consideration of public comments, we are finalizing the changes to measure Q006 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.

Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.4 Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%)**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0070 / 0070e
<b>Quality#:</b>	007
<b>CMS eCQM ID:</b>	CMS145v9
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	eCQM Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have a prior MI or a current or prior LVEF < 40% who were prescribed beta-blocker therapy.
<b>Substantive Change:</b>	<p><b>Updated logic: For the eCQM Specifications collection type:</b> Added constraint to measure logic in instances when the patient has both prior (within the past 3 years) MI and LVEF &lt; 40%.</p> <p><b>The guidance is revised to read: For the eCQM Specifications collection type:</b>                      Beta-blocker therapy:                      - For patients with prior MI, beta-blocker therapy includes any agent within the beta-blocker drug class. As of 2015, no recommendations or evidence are cited in current stable ischemic heart disease guidelines for preferential use of specific agents                      - For patients with prior LVEF &lt;40%, beta-blocker therapy includes the following: bisoprolol, carvedilol, or sustained release metoprolol succinate.                      The requirement of two or more visits is to establish that the eligible professional or eligible clinician has an existing relationship with the patient.                      A range value should satisfy the logic requirement for 'Ejection Fraction' as long as the ranged observation value clearly meets the less than 40% threshold noted in the denominator logic. A range that is inclusive of or greater than 40% would not meet the measure requirement.                      If a patient has had a myocardial infarction (MI) within the past 3 years and a current or prior LVEF &lt; 40% (or moderate or severe LVSD), the patient should only be counted in Population Criteria 1.                      This eCQM is a patient-based measure.                      This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (<a href="https://ecqi.healthit.gov/qdm">https://ecqi.healthit.gov/qdm</a>) for more information on the QDM. Beta-blocker therapy:</p> <p><b>The instructions are revised to read: For the MIPS CQMs Specifications collection type:</b> This measure is to be submitted a minimum of once per performance period for all patients with a diagnosis of CAD seen during the performance period. Only patients who had at least two denominator-eligible visits during the performance period will be counted for Submission Criteria 1 and Submission Criteria 2 of this measure. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure for the primary management of patients with CAD based on the services provided and the measure-specific denominator coding.                      The MIPS eligible clinician should submit data on one of the submission criteria, depending on the clinical findings. If the patient has CAD or history of cardiac surgery and a current or prior LVEF &lt; 40% (or moderate or severe LVSD), use Submission Criteria 1. If the patient has CAD or history of cardiac surgery and has a prior (within the past 3 years) MI, use Submission Criteria 2. The 3-year lookback period for the prior MI should be from the time of the encounter that is used to qualify for the denominator and evaluate the numerator. If the patient has had an MI within the past 3 years and has a current or prior LVEF &lt; 40% (or moderate or severe LVSD), the MIPS eligible clinician should submit quality-data codes for Submission Criteria 1 and this will count as appropriate submission for this patient.</p> <p><b>Updated denominator criteria: For all collection type:</b> Added telehealth as eligible for all encounters.</p> <p><b>Updated denominator criteria: For the MIPS CQMs Specifications collection type:</b>                      Denominator Criteria One: Revised: Left ventricular ejection fraction (LVEF) &lt; 40% or documentation of moderate or severe LVSD.</p> <p><b>Updated denominator exception: For eCQM Specifications collection type:</b> Removed coding from the 'Medical Reason' value set for concepts not indicating medical contraindication.</p>
<b>Steward:</b>	
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to update the eCQM Specifications collection type logic to improvement alignment with measure intent as it will add constraints to help prevent double counting of patients who had both a myocardial infarction and LVEF &lt; 40% within the past 3 years. Additionally, the guidance was revised to help clarify which population eligible patients should be included for the purposes of this measure. We also proposed to revise the 'Medical Reason' value set based upon expert and stakeholder feedback to remove codes based upon intent of concepts, which do not indicate a medical contraindication, but rather a provider decision to discontinue or adjust a course of treatment. These codes do not meet the intent of the denominator exception.</p> <p>For both the eCQM Specifications and MIPS CQMs Specifications collection types, the guidance and instructions have been updated, respectively, to add moderate or severe LVSD as a proxy for LVEF &lt; 40%. The measure steward's Technical Expert Panel (TEP) determined that moderate or severe LVSD is an appropriate proxy and aligns with the intent of the measure. We agreed with this addition as LVSD can be "defined as a left ventricular ejection fraction less than 40 percent or a narrative description consistent with moderate or severe systolic dysfunction." (Per the Joint Commission Specifications Manual (v2018A)). Additionally, we proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly</p>

**D.6 Primary Open-Angle Glaucoma (POAG): Optic Nerve Evaluation**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0086 / 0086e
<b>Quality#:</b>	012
<b>CMS eCQM ID:</b>	CMS143v9
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) who have an optic nerve head evaluation during one or more office visits within 12 months.
<b>Substantive Change:</b>	<p><b>Modified collection type:</b> eCQM Specifications</p> <p><b>Updated denominator exception: For eCQM Specifications collection type:</b> Removed coding from the ‘Medical Reason’ value set for concepts not indicating medical contraindication.</p> <p><b>Per the ‘Telehealth Guidance for Electronic Clinical Quality Measures (eCQMs) for Eligible Professional/Eligible Clinician 2021 Quality Reporting’:</b> Medicare telehealth eligible codes found in any encounter value set must only be used for in-person encounters for the following eCQMs.</p>
<b>Steward:</b>	American Academy of Ophthalmology
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to remove the Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications collection types as they have reached the end of the topped out lifecycle as finalized in 82 FR 53640. However, the benchmarking data continues to show a gap for the eCQM Specifications collection type, as such, the measure will be retained for this collection type.</p> <p>We also proposed to revise the ‘Medical Reason’ value set based upon expert and stakeholder feedback to remove codes based upon intent of concepts, which do not indicate a medical contraindication, but rather a provider decision to discontinue or adjust a course of treatment. These codes do not meet the intent of the denominator exception.</p> <p>We proposed to remove telehealth encounters from the denominator of the eCQM Specifications collection type as telehealth is not an appropriate setting for this measure, as well as to align with the other collection types. This guidance can be found in a separate document that will be published on the eCQI Resource Center.</p>
<p><b>Comment:</b> One commenter opposed CMS’s proposal to remove the Medicare Part B Claims Measure Specifications collection type for measure Q012 because it would adversely impact ophthalmologists, particularly those in small and rural practices who must rely on the claims reporting collection type because they cannot afford to adopt CEHRT. The commenter recognized the topped out status under the claims and MIPS CQM collection types, but removing this measure entirely from the claims collection type will result in even fewer measures relevant to ophthalmologists’ scope of practice.</p> <p><b>Response:</b> We strive to ensure that all measures align with the Meaningful Measures Initiative, including the removal of measures that are at the end of the topped out lifecycle. Additionally, by removing collection types at the end of the topped out lifecycle, we are attempting to reduce reporting burden where there is little room for improvement. Removal allows eligible clinicians to maximize their potential quality performance score as this measure’s topped out status would limit the score awarded per the 2020 Benchmark File.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q012 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.7 Age-Related Macular Degeneration (AMD): Dilated Macular Examination**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0087 / N/A
<b>Quality#:</b>	014
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 50 years and older with a diagnosis of age-related macular degeneration (AMD) who had a dilated macular examination performed which included documentation of the presence or absence of macular thickening or geographic atrophy or hemorrhage AND the level of macular degeneration severity during one or more office visits within the 12-month performance period.
<b>Substantive Change:</b>	<b>Updated numerator definition: For all collection types:</b> Revised: Severity of Macular Degeneration – Early, intermediate and advanced; or active choroidal neovascularization, inactive choroidal neovascularization, or with inactive scar.
<b>Steward:</b>	American Academy of Ophthalmology
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the definition referencing the clinical stages for the ‘Severity of Macular Degeneration’ to clarify and align the concept with ICD-10 terminology. Adding clarity that these codes are clinically relevant and applicable.
<p><b>Comment:</b> One commenter supported updating the definition referencing the clinical stages for the ‘Severity of Macular Degeneration’ to clarify and align the concept with ICD-10 terminology.</p> <p><b>Response:</b> We thank the commenter for supporting the change to this measure.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q014 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.8 Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	019
<b>CMS eCQM ID:</b>	CMS142v9
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Current Collection Type:</b>	eCQM Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed with documented communication to the physician who manages the ongoing care of the patient with diabetes mellitus regarding the findings of the macular or fundus exam at least once within 12 months.
<b>Substantive Change:</b>	<p><b>Update numerator logic: For the eCQM Specifications collection type:</b> Removed “sender” and “recipient” attributes.</p> <p><b>Updated value set/coding: For the eCQM Specifications collection type:</b> Removed “sender” and “recipient” attributes.</p> <p><b>Updated denominator exception: For eCQM Specifications collection type:</b> Removed coding from the ‘Medical Reason’ value set for concepts not indicating medical contraindication.</p> <p><b>Per the ‘Telehealth Guidance for Electronic Clinical Quality Measures (eCQMs) for Eligible Professional/Eligible Clinician 2021 Quality Reporting’:</b> Medicare telehealth eligible codes found in any encounter value set must only be used for in-person encounters for the following eCQMs.</p>
<b>Steward:</b>	American Academy of Ophthalmology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to remove the “sender” and “recipient” attributes from the numerator logic and the value set/coding of the eCQM Specifications collection type and reverted to the numerator logic from performance year 2019. These attributes increased burden and were difficult to implement. We also proposed to revise the ‘Medical Reason’ value set based upon expert and stakeholder feedback to remove codes based upon intent of concepts, which do not indicate a medical contraindication, but rather a provider decision to discontinue or adjust a course of treatment. These codes do not meet the intent of the denominator exception.</p> <p>We proposed to remove telehealth encounters from the denominator of the eCQM Specifications collection type as telehealth is not an appropriate setting for this measure, as well as to align with the other collection types. This guidance can be found in a separate document that will be published on the eCQI Resource Center.</p>
<p><b>Comment:</b> One commenter supported CMS’s proposed removal of "sender" and "recipient" attributes. This will decrease burden and make the measure technically easier to report. The commenter also supported the proposed removal of denominator exception "Medical Reason" codes as they are inappropriate for this measure.</p> <p><b>Response:</b> We thank the commenter for supporting the changes to this measure.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q019 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. **D.9 Advance Care Plan**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0326 / N/A
<b>Quality#:</b>	047
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.
<b>Substantive Change:</b>	<b>Updated denominator: For all collection types:</b> Added clinical social worker clinician type.
<b>Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add the clinical social worker clinician type to the denominator eligible encounters as this clinical concept is applicable to their scope of practice since these clinicians are integral to ensuring patients have up to date advance care plans and/or surrogate decision makers documented within the medical record.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q047 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.10 Chronic Obstructive Pulmonary Disease (COPD): Long-Acting Inhaled Bronchodilator Therapy**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0102 / N/A
<b>Quality#:</b>	052
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of COPD (FEV1/FVC < 70%) and who have an FEV1 less than 60% predicted and have symptoms who were prescribed a long-acting inhaled bronchodilator.
<b>Substantive Change:</b>	<b>Modified collection type:</b> MIPS CQMs Specifications
<b>Steward:</b>	American Thoracic Society
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to remove the Medicare Part B Claims Measure Specifications collection type as it has reached the end of the topped out lifecycle as finalized in 82 FR 53640. As captured in the 2020 Benchmark File, this collection type also has high performance rate. However, the benchmarking data continues to show a gap for the MIPS CQMs Specifications collection type, as such, the measure will be retained for this collection type.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q052 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.11 Appropriate Treatment for Children with Upper Respiratory Infection (URI)**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0069 / N/A
<b>Quality#:</b>	065
<b>CMS eCQM ID:</b>	CMS154v9
<b>National Quality Strategy Domain:</b>	Efficiency and Cost Reduction
<b>Current Collection Type:</b>	eCQM Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of children 3 months - 18 years of age who were diagnosed with upper respiratory infection (URI) and were not dispensed an antibiotic prescription on or 3 days after the episode.
<b>Substantive Change:</b>	<p><b>The title is revised from 'Appropriate Treatment for Children with Upper Respiratory Infection (URI)' to:</b> Appropriate Treatment for Upper Respiratory Infection (URI)</p> <p><b>The description is revised to read:</b> Percentage of episodes for patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) that did not result in an antibiotic dispensing event.</p> <p><b>The initial patient population is revised to read: For the eCQM Specifications collection type:</b> Outpatient visits, telephone visits, online assessments, observation stays or emergency department visits with a diagnosis of URI during the measurement period among patients 3 months of age and older.</p> <p><b>Updated stratification: For the eCQM Specifications collection type:</b> 3 months-17 years, 18-64 years, 65 years and older.</p> <p><b>The guidance is revised to read: For the eCQM Specifications collection type:</b> This is an episode of care measure that examines all eligible episodes for the patient during the measurement period This eCQM is an episode-based measure. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (<a href="https://ecqi.healthit.gov/qdm">https://ecqi.healthit.gov/qdm</a>) for more information on the QDM.</p> <p><b>The denominator is revised to read: For the MIPS CQMs Specifications collection type:</b> Outpatient visits, telephone visits, online assessments, observation stays or emergency department visits with a diagnosis of upper respiratory infection (URI) during the measurement period among patients 3 months of age and older.</p> <p><b>Updated denominator criteria: For the MIPS CQMs Specifications collection type:</b> Revised: Patients aged 3 months of age and older on date of encounter. Revised denominator eligible coding to include telehealth with qualified nonphysician health care professional.</p> <p><b>The denominator instruction is revised to read: For the MIPS CQMs Specifications collection type:</b> This is an episode of care measure that examines all eligible episodes for the patient during the measurement period. If the patient has more than one episode in a 31-day period, include only the first episode.</p> <p><b>Updated denominator exclusion:</b> <b>For the eCQMs Specifications collection type:</b> Added: 1. Exclude URI episodes when the patient had a competing comorbid condition during the 12 months prior to or on the episode date. Revised: 1. Exclude URI episodes when the patient had a new or refill prescription of antibiotics in the 30 days prior to or on the episode date. 2. Exclude URI episodes when the patient had competing diagnosis on or 3 days after the episode date. 3. Exclude URI episodes when the patient had hospice care overlapping with the measurement period. <b>For MIPS CQMs Specifications collection type:</b> Added: 1. URI episodes where the patient had a competing comorbid condition during the 12 months prior to or on the episode date (e.g., tuberculosis, neutropenia, cystic fibrosis, chronic bronchitis, pulmonary edema, respiratory failure, rheumatoid lung disease). 2. URI episodes when the patient had a new or refill prescription of antibiotics (Table 1) in the 30 days prior to or on the episode date. Revised: 1. URI episodes when the patient had competing diagnoses on or 3 days after the episode date (e.g., intestinal infection, pertussis, bacterial infection, Lyme disease, otitis media, acute sinusitis, acute pharyngitis, acute tonsillitis, chronic sinusitis, infection of the pharynx/larynx/tonsils/adenoids, prostatitis, cellulitis, mastoiditis, or bone infections, acute lymphadenitis, impetigo, skin staph infections, pneumonia/gonococcal infections, venereal disease (syphilis, chlamydia, inflammatory diseases [female reproductive organs]), infections of the kidney, cystitis or UTI, and acne). Removed: 1. Children who are taking antibiotics in the 30 days prior to the date of the encounter during which the diagnosis was established.</p> <p><b>The numerator is revised to read:</b> <b>For the eCQMs Specifications collection type:</b> URI episodes without a prescription for antibiotic medication on or 3 days after the outpatient visit, telephone visit, online assessment, observation stay or emergency department visit for an upper respiratory infection.</p>

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

Category	Description
	<p><b>For the MIPS CQMs Specifications collection type:</b>                      URI episodes without a prescription for antibiotic medication (from Table 1) on or 3 days after the outpatient visit, telephone visit, online assessment, observation stay or emergency department visit for an upper respiratory infection.</p> <p><b>The numerator instruction is revised to read: For the MIPS CQMs Specifications collection type:</b> For performance, the measure will be calculated as the number of patient’s encounter(s) where antibiotics from Table 1 were neither prescribed nor dispensed on or within 3 days of the episode for URI over the total number of encounters in the denominator. A higher score indicates appropriate treatment of patients with URI (e.g., the proportion for whom antibiotics were not prescribed or dispensed following the episode). Delayed prescriptions (where an antibiotic was prescribed and patient was instructed to delay taking the antibiotic) are considered “Performance Not Met”.</p> <p>Table 1 - Antibiotic Medications                      Note: This list should be used when assessing antibiotic prescriptions for the denominator exclusion and numerator components.</p> <p>Revised:                      Table 1 – Antibiotic Medication: Added Penicillin G benzathine and removed ‘Miscellaneous Antibiotics Category’ (Erythromycin-sulfisoxazole)</p> <p><b>Updated value set: For the eCQM Specifications collection type:</b> Added ‘Aggressive periodontitis’ to the value set for competing diagnosis. Added telehealth services value set to eligible encounters.</p>
<b>Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed the measure language be updated to reflect a broader denominator eligible population by revising the age to include all patients over 3 months of age as concerns regarding overuse of antibiotics are not limited to the pediatric population. This will allow for clinicians to report on both pediatric and adult patients. The denominator instructions and guidance are revised to clarify that only the first episode should be included if a patient has multiple episodes in a 31-day period. The denominator exclusions have been updated to reflect the change in age range and to align language with the measure submission frequency. Additionally, a denominator exclusion has been added to remove patients with competing comorbid conditions from the denominator population as it may be clinically appropriate and warranted to treat them with antibiotics in accordance with appropriate care.</p> <p>The numerator note for the MIPS CQMs Specifications collection type was updated to clarify use of delayed prescriptions and the antibiotic medication table. Given the intent of the measure is to assess appropriate antibiotic use, delayed prescriptions will be considered numerator non-compliant as this would still constitute prescribing an antibiotic. The antibiotic medication table was also updated to be clinically relevant.</p> <p>The eCQM Specifications collection type value set for competing diagnosis was updated to include aggressive periodontitis as it is clinically relevant to the denominator exclusion intent. Additionally, a telehealth services value set was added to the eligible encounters for a more complete patient population.</p>
	<p>We proposed a substantive change to the Numerator for the MIPS CQMs Specifications collection type: however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state:                      URI episodes without a prescription for antibiotic medication (Table 1) on or 3 days after the outpatient visit, telephone visit, online assessment, observation stay or emergency department visit for an upper respiratory infection.</p> <p>This additional refinement of revising ‘(from Table 1)’ to ‘(Table 1)’ does not affect the intent of the proposed substantive change.</p> <p><b>Comment:</b> One commenter stated that placing an acute and transient diagnosis on the patient problem list has the potential to inappropriately identify URI encounters because problem lists do not have expiration dates. The commenter recommended that a URI is an acute diagnosis that should only be captured as a visit diagnosis. The commenter also stated that antibiotics ordered without an end date have the potential to be included in the measure even if the antibiotic order was placed months prior to the URI encounter. The commenter recommended that the logic should not look at any antibiotics outside of the 30 day window.</p> <p><b>Response:</b> We thank the commenter for their comment. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q065 as indicated for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>

**D.12 Appropriate Testing for Children with Pharyngitis**

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	066
CMS eCQM ID:	CMS146v9
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of children 3-18 years of age who were diagnosed with pharyngitis, ordered an antibiotic and received a group A streptococcus (strep) test for the episode.
Substantive Change:	<p><b>The title is revised from ‘Appropriate Testing for Children with Pharyngitis’ to:</b> Appropriate Testing for Pharyngitis</p> <p><b>The description is revised to read:</b> The percentage of episodes for patients 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic dispensing event and a group A streptococcus (strep) test.</p> <p><b>The guidance is revised to read: For the eCQM Specifications collection type:</b> This is an episode of care measure that examines all eligible episodes for the patient during the measurement period. This eCQM is an episode-based measure. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (<a href="https://ecqi.healthit.gov/qdm">https://ecqi.healthit.gov/qdm</a>) for more information on the QDM.</p> <p><b>The initial patient population is revised to read: For the eCQM Specifications collection type:</b> Outpatient, telephone, online assessment, observation, or emergency department (ED) visits with a diagnosis of pharyngitis and an antibiotic dispensing event among patients 3 years or older.</p> <p><b>The denominator is revised to read: For the MIPS CQMs Specifications collection type:</b> Outpatient, telephone, online assessment, observation, or emergency department (ED) visits with a diagnosis of pharyngitis and an antibiotic dispensing event among patients 3 years or older.</p> <p><b>Updated denominator criteria: For the MIPS CQMs Specifications collection type:</b> Revised denominator eligible coding to include telehealth with qualified nonphysician health care professional.</p> <p><b>The denominator instructions are revised to read: For the MIPS CQMs Specifications collection type:</b> This is an episode of care measure that examines all eligible episodes for the patient during the measurement period. If a patient has more than one eligible episode in a 31-day period, include only the first eligible episode.</p> <p><b>Updated denominator exclusion:</b>  <b>For the eCQMs Specifications collection type:</b> Added:                      1. Exclude episodes where the patient had a competing comorbid condition during the 12 months prior to or on the episode date.                      Revised:                      1. Exclude episodes where the patient is taking antibiotics in the 30 days prior to the episode date.                      2. Exclude episodes when the patient had hospice care overlapping with the measurement period.                      3. Exclude episodes where the patient had a competing diagnosis within 3 days after the episode date.  <b>For MIPS CQMs Specifications collection type:</b> Added:                      1. Episodes where the patient had a competing comorbid condition during the 12 months prior to or on the episode date (e.g., tuberculosis, neutropenia, cystic fibrosis, chronic bronchitis, pulmonary edema, respiratory failure, rheumatoid lung disease).                      Revised:                      1. Episodes where the patient is taking antibiotics (Table 1) in the 30 days prior to the episode date.                      2. Episodes where the patient had a competing diagnosis within 3 days after the episode date (e.g., intestinal infection, pertussis, bacterial infection, Lyme disease, otitis media, acute sinusitis, chronic sinusitis, infection of the pharynx/larynx/tonsils/adenoids, prostatitis, cellulitis, mastoiditis, or bone infections, acute lymphadenitis, impetigo, skin staph infections, pneumonia/gonococcal infections, venereal disease (syphilis, chlamydia, inflammatory diseases [female reproductive organs]), infections of the kidney, cystitis or UTI).</p> <p><b>Updated Table 1: For the MIPS CQMs Specifications collection type:</b> Added: Note: This list should be used when assessing antibiotic prescriptions for the denominator and denominator exclusion components.                      Revised:                      Table 1 – Antibiotic Medication: Added Penicillin G benzathine and removed ‘Miscellaneous Antibiotics Category’ (Erythromycin-sulfisoxazole)</p> <p><b>The numerator is revised to read: For all collection types:</b> A group A streptococcus test in the 7-day period from 3 days prior to the episode date through 3 days after the episode date.</p> <p><b>Updated stratification: For the eCQM Specifications collection type:</b> 3-17 years, 18-64 years, 65 years and older.</p> <p><b>Updated value set: For the eCQM Specifications collection type:</b> Added telehealth services value set to eligible encounters.</p>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes

Category	Description
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed the measure language be updated to reflect a broader denominator eligible population by revising the age to include all patients over 3 months of age as concerns regarding appropriate testing are not limited to the pediatric population. This will allow for clinicians to report on both pediatric and adult patients. The denominator instructions and guidance are revised to clarify that only the first episode should be included if a patient has multiple episodes in a 31-day period. The denominator exclusions have been updated to reflect the change in age range and to align language with the measure submission frequency. Additionally, a denominator exclusion has been added to remove patients with competing comorbid conditions from the denominator population as it may be clinically appropriate and warranted to treat them with antibiotics in accordance with appropriate care. For the MIPS CQMs Specifications collection type, Table 1 was updated to remain clinically relevant and a note was added to clarify usage of Table 1 for the purposes of this measure.</p> <p>The eCQM Specifications collection type value set for competing diagnosis was updated to include aggressive periodontitis as it is clinically relevant to the denominator exclusion intent. Additionally, a telehealth services value set was added to the eligible encounters for a more complete patient population.</p>
<p>We proposed a substantive change to the denominator exclusion for the MIPS CQMs Specifications collection type: however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state:</p> <p>Added:</p> <ol style="list-style-type: none"> <li>1. Episodes where the patient had a competing comorbid condition during the 12 months prior to or on the episode date (e.g., tuberculosis, neutropenia, cystic fibrosis, chronic bronchitis, pulmonary edema, respiratory failure, rheumatoid lung disease).</li> </ol> <p>Revised:</p> <ol style="list-style-type: none"> <li>1. Episodes where the patient is taking antibiotics (Table 1) in the 30 days prior to the episode date.</li> <li>2. Episodes where the patient had a competing diagnosis within three days after the episode date (e.g., intestinal infection, pertussis, bacterial infection, Lyme disease, otitis media, acute sinusitis, chronic sinusitis, infection of the adenoids, prostatitis, cellulitis, mastoiditis, or bone infections, acute lymphadenitis, impetigo, skin staph infections, pneumonia/gonococcal infections, venereal disease (syphilis, chlamydia, inflammatory diseases [female reproductive organs]), infections of the kidney, cystitis or UTI)</li> </ol> <p>This additional refinement of language within the competing diagnosis exclusion does not affect the intent of the proposed substantive change, but removes the duplication in denominator eligible clinical encounters that present with a bacterial infection therefore allowing reporting eligible clinicians to report a denominator exclusion for these patients would not influence overall performance of the measure.</p> <p>We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q066 as indicated for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>

**D.13 Acute Otitis Externa (AOE): Systemic Antimicrobial Therapy – Avoidance of Inappropriate Use**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	654/N/A
<b>Quality#:</b>	093
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Efficiency and Cost Reduction
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 2 years and older with a diagnosis of AOE who were not prescribed systemic antimicrobial therapy.
<b>Substantive Change:</b>	<b>Updated denominator: For all collection types:</b> Added telehealth as eligible encounter.
<b>Steward:</b>	American Academy of Otolaryngology – Head and Neck Surgery
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.
<b>Comment:</b> Two commenters supported the addition of telehealth reporting for measure Q093.	
<b>Response:</b> We thank the commenters for supporting the addition of telehealth reporting for this measure.	
After consideration of public comments, we are finalizing the changes to measure Q093 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.14 Adult Major Depressive Disorder (MDD): Suicide Risk Assessment**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / 0104e
<b>Quality#:</b>	107
<b>CMS eCQM ID:</b>	CMS161v9
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	eCQM Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of major depressive disorder (MDD) with a suicide risk assessment completed during the visit in which a new diagnosis or recurrent episode was identified.
<b>Substantive Change:</b>	<p><b>The description is revised to read:</b> All patient visits during which a new diagnosis of MDD or a new diagnosis of recurrent MDD was identified for patients aged 18 years and older with a suicide risk assessment completed during the visit.</p> <p><b>Updated guidance:</b> Added: In recognition of the growing use of integrated and team-based care, the diagnosis of dementia and the assessment of cognitive function need not be performed by the same provider or clinician.</p> <p><b>The initial patient population is revised to read:</b> Patient visits during which a new diagnosis of MDD, single or recurrent episode, was identified.</p> <p><b>The numerator is revised to read:</b> Patient visits during which a new diagnosis of MDD, single or recurrent episode, was identified and a suicide risk assessment was completed during the visit.</p>
<b>Steward:</b>	Mathematica
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the description, initial patient population, and numerator language to better align with the measure intent and clarify that the measure is episodic in nature. The measure steward updated the guidance statement based upon technical expert feedback to reflect that team-based care would be appropriate for this measure. We agreed that this guidance update is clinically appropriate and aligns better with clinical care workflows.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q107 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.

**D.15 Preventive Care and Screening: Influenza Immunization**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0041 / 0041e
<b>Quality#:</b>	110
<b>CMS eCQM ID:</b>	CMS147v10
<b>National Quality Strategy Domain:</b>	Community/Population Health
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.
<b>Substantive Change:</b>	<p><b>Modified collection type:</b> Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications</p> <p><b>Updated guidance: For the eCQM Specifications collection type:</b> Revised:                  Due to the changing stance of the CDC/ACIP recommendations regarding the live attenuated influenza vaccine (LAIV) for a particular flu season, this measure will not include the administration of this specific formulation of the flu vaccination. Given the variance of the timeframes for the annual update cycles, program implementation, and publication of revised recommendations from the CDC/ACIP, it has been determined that the coding for this measure will specifically exclude this formulation, so as not to inappropriately include this form of the vaccine for flu seasons when CDC/ACIP explicitly advise against it. However, it is recommended that all eligible professionals or eligible clinicians to review the guidelines for each flu season to determine appropriateness of the LAIV and other formulations of the flu vaccine. Should the LAIV be recommended for administration for a particular flu season, eligible professional or clinician may consider one of the following options: 1) satisfy the numerator by reporting either previous receipt or using the CVX 88 for unspecified formulation, 2) report a denominator exception, either as a patient reason (e.g., for patient preference) or a system reason (e.g., the institution only carries LAIV).                  This is a patient-based measure.</p> <p><b>Updated denominator note: For the Medicare Part B Claims Measure Specifications collection type:</b> Added:                  For the purposes of the program, to submit on the flu season 2020-2021, the patient must have a qualifying encounter between January 1 and March 31, 2021. to submit on the flu season 2021-2022, the patient must have a qualifying encounter between October 1 and December 31, 2021. A qualifying encounter needs to occur within the flu season that is being submitted; any additional encounter(s) may occur at any time within the measurement period.</p> <p><b>Updated denominator exception: For the eCQM Specifications collection type:</b> Removed coding from the ‘Medical Reason’ value set for concepts not indicating medical contraindication.</p> <p><b>Updated denominator:</b> For all collection types: Added telehealth as eligible encounter.</p>
<b>Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to update the denominator note for the Medicare Part B Claims Measure Specifications collection type to add clarity and align the language with the MIPS CQMs Specifications collection type.</p> <p>We proposed to update the guidance for the eCQM Specifications collection type to better align with the updated CDC/ACIP clinical guidelines and to clarify the intent of the measure. We also proposed to revise the ‘Medical Reason’ value set based upon expert and stakeholder feedback to remove codes based upon intent of concepts, which do not indicate a medical contraindication, but rather a provider decision to discontinue or adjust a course of treatment. These codes do not meet the intent of the denominator exception.</p> <p>We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p> <p>We proposed to remove the CMS Web Interface Measure Specifications collection type. This collection type was proposed to be sunset for the purposes of MIPS starting with the 2021 performance year. We have determined it is not fiscally viable, feasible, or sustainable for MIPS to continue this collection type/submission type due to an 80 percent reduction and a continued decrease in interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures. For further rationale, please see section IV.A.3.c.(1)(c) of this final rule.</p>
<p>We proposed a substantive change to the Denominator Note for the Medicare Part B Claims Measure Specifications collection type; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state: For the purposes of the program, in order to submit on the flu season 2020-2021, the patient must have a qualifying encounter between January 1 and March 31, 2021. In order to submit on the flu season 2021-2022, the patient must have a qualifying encounter between October 1 and December 31, 2021. A qualifying encounter needs to occur within the flu season that is being submitted; any additional encounter(s) may occur at any time within the measurement period.</p> <p>This additional refinement of including the language ‘in order’ preceding the instance of ‘to submit’ within the proposed language does not affect the intent of the proposed substantive change.</p> <p><b>Comment:</b> One commenter supported the addition of telehealth reporting for measure Q110.</p> <p><b>Response:</b> We thank the commenter for supporting the addition of telehealth reporting for this measure.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

Category	Description
<b>Comment:</b>	One commenter did not support the addition of telehealth reporting for measure Q110.
<b>Response:</b>	We believe that it is important to ensure all patients have received an influenza vaccine as this is critical to the community and population health. It is important to have a complete denominator patient population to assess numerator compliance, which should include those encounters that occur via telehealth.
	<p>After consideration of public comments, we are finalizing the changes to measure Q110 as indicated for the 2021 MIPS performance period/2023 MIPS payment year and future years with the exception of the CMS Web Interface Specifications collection type. At § 414.1305, we proposed to modify the definition of the terms collection type and submission type by removing the CMS Web Interface Specifications as an available option starting with the 2023 payment year (85 FR 50290); however, the CMS Web Interface Measure Specifications collection type will be an available option for an extension of one additional year (2021 MIPS performance period/2023 MIPS payment year) and will be removed as a collection and submission type starting with the 2022 MIPS performance period/2024 MIPS payment year. None of the substantive changes above will be applied to the CMS Web Interface Measure Specifications for the 2021 MIPS performance period. The CMS Web Interface Specifications for the 2021 MIPS performance period will reflect the 2020 CMS Web Interface Specifications. In addition, we are not finalizing the proposed additional telehealth encounter eligibility substantive change for the eCQM Specifications collection type because this is already specified in the current measure.</p>

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. **D.16 Breast Cancer Screening**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	2372 / N/A
<b>Quality#:</b>	112
<b>CMS eCQM ID:</b>	CMS125v9
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of women 50 - 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.
<b>Substantive Change:</b>	<p><b>Modified collection type:</b> Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications</p> <p><b>Updated denominator exclusion: For the eCQM Specifications collection type:</b> Removed logic and value set related to unilateral mastectomy.</p> <p><b>Updated denominator exclusion: For the eCQM Specifications collection type:</b> Revised: Exclude patients 66 and older who are living long term in an institution for more than 90 consecutive days during the measurement period.</p> <p><b>Updated denominator exclusion logic: For the eCQM Specifications collection type:</b> Updated encounters so they are "on or" before the end of the measurement period. Updated the LTI exclusion to be 90 consecutive days. Changed the name of the under 81 exclusion definition to "FrailtyLTI.Advanced Illness and Frailty Exclusion Not Including Over Age 80".</p> <p><b>Updated denominator exclusion: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types:</b> Revised: Patients age 66 or older in Institutional Special Needs Plans (SNP) or residing in long-term care with POS code, 32, 33, 34, 54, or 56 for more than 90 consecutive days during the measurement period</p> <p><b>Updated denominator exclusion: For the Medicare Part B Claims Measure Specifications collection type and the MIPS CQMs Specifications collection type:</b> Added coding to identify patients with advanced illness and frailty</p>
<b>Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed that the denominator exclusion language and logic be updated to clarify that, for the measure, long-term care will be defined as patients staying 90 consecutive days at the long-term care facility versus any 90 days within the performance period. For the eCQM Specifications collection, we proposed removing the logic and value set related to unilateral mastectomy to ensure that all patients with existing breast tissue are included in the initial patient population as it is important they receive screening for breast cancer on remaining breast tissue.</p> <p>Additionally, for the MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection types, we proposed adding applicable coding to better define the advanced illness and frailty patient population for the purposes of this measure</p> <p>We proposed to remove the CMS Web Interface Measure Specifications collection type. This collection type was proposed to be sunset for the purposes of MIPS starting with the 2021 performance year. We have determined it is not fiscally viable, feasible, or sustainable for MIPS to continue this collection type/submission type due to an 80 percent reduction and a continued decrease in interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures. For further rationale, please see section IV.A.3.c.(1)(c) of this final rule.</p>
<b>Comment:</b>	<p>One commenter had concerns about removing unilateral mastectomy from the mammogram quality measure. Current specifications clarify that both a right and left unilateral must be completed to count as an exclusion. The commenter saw no reason to remove that logic, as it still accomplishes what CMS is asking for by ensuring that, "all patients with existing breast tissue are included in the initial patient population as it is important they receive screening for breast cancer on remaining breast tissue." A second commenter requested that CMS provide clarification on the statement "Removed logic and value set related to unilateral mastectomy," as the commenter believed the intent of this statement is unclear.</p>
<b>Response:</b>	<p>This revision was made to ensure that the logic is in alignment with the measure intent. As the logic is currently, a patient would be excluded if they had two unilateral mastectomy codes. However, it is possible for a patient to have two partial mastectomies on the same breast. Therefore, instances of mastectomies without indication of right or left side are being removed to increase specificity and ensure only those patients with total mastectomies are excluded. This will capture a more complete patient population for the assessment of the quality action and ensure patients with existing breast tissue are screened for breast cancer.</p>
<p>After consideration of public comments, we are finalizing the changes to measure Q112 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years with the exception of the CMS Web Interface Specifications collection type. At § 414.1305, we proposed to modify the definition of the terms collection type and submission type by removing the CMS Web Interface Specifications as an available option starting with the 2023 payment year (85 FR 50290); however, the CMS Web Interface Measure Specifications collection type will be an available option for an extension of one additional year (2021 MIPS performance period/2023 MIPS payment year) and will be removed as a collection and submission type starting with the 2022 MIPS performance period/2024 MIPS payment year. None of the substantive changes above will be applied to the CMS Web Interface Measure Specifications for the 2021 MIPS performance period. The CMS Web Interface Specifications for the 2021 MIPS performance period will reflect the 2020 CMS Web Interface Specifications.</p>

**D.17 Colorectal Cancer Screening**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0034 / N/A
<b>Quality#:</b>	113
<b>CMS eCQM ID:</b>	CMS130v9
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients 50-75 years of age who had appropriate screening for colorectal cancer.
<b>Substantive Change:</b>	<p><b>Modified collection type:</b> Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications.</p> <p><b>Updated denominator exclusion: For the eCQM Specifications collection type:</b> Revised:</p> <ol style="list-style-type: none"> <li>1. Exclude patients 66 and older who are living long term in an institution for more than 90 consecutive days during the measurement period.</li> <li>2. Exclude patients with a diagnosis or past history of total colectomy or colorectal cancer.</li> </ol> <p><b>Updated denominator exclusion logic: For the eCQM Specifications collection type:</b> Updated encounters so they are "on or" before the end of the measurement period. Updated the LTI exclusion to be 90 consecutive days. Changed the name of the under 81 exclusion definition to "FrailtyLTI.Advanced Illness and Frailty Exclusion Not Including Over Age 80".</p> <p><b>Updated denominator criteria: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types:</b> Removed coding not applicable to preventive value sets.</p> <p><b>Updated denominator exclusion: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types:</b> Revised: Patients age 66 or older in Institutional Special Needs Plans (SNP) or residing in long-term care with POS code, 32, 33, 34, 54, or 56 for more than 90 consecutive days during the measurement period.</p> <p><b>Updated denominator exclusion: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types:</b> Added coding to identify patients with advanced illness and frailty.</p>
<b>Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed that the denominator exclusion language and logic be updated to clarify that, for the measure, long-term care will be defined as patients staying 90 consecutive days at the long-term care facility versus any 90 days within the performance period. For the eCQM Specifications collection type We also proposed to revise the language for the exclusion for diagnosis or past history of total colectomy or colorectal cancer for clarity and to align with the other denominator exclusions.</p> <p>Additionally, for the MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection types, we proposed adding applicable coding to better define the advanced illness and frailty patient population for the purposes of this measure. We proposed to remove denominator eligible coding that is not applicable to a preventive value set and may not be appropriate for inclusion in the measure's denominator eligible patient population.</p> <p>We proposed to remove the CMS Web Interface Measure Specifications collection type. This collection type was proposed to be sunset for the purposes of MIPS starting with the 2021 performance year. We have determined it is not fiscally viable, feasible, or sustainable for MIPS to continue this collection type/submission type due to an 80 percent reduction and a continued decrease in interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures. For further rationale, please see section IV.A.3.c.(1)(c) of this final rule.</p>
<p>We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q113 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years with the exception of the CMS Web Interface Specifications collection type. At § 414.1305, we proposed to modify the definition of the terms collection type and submission type by removing the CMS Web Interface Specifications as an available option starting with the 2023 payment year (85 FR 50290); however, the CMS Web Interface Measure Specifications collection type will be an available option for an extension of one additional year (2021 MIPS performance period/2023 MIPS payment year) and will be removed as a collection and submission type starting with the 2022 MIPS performance period/2024 MIPS payment year. None of the substantive changes above will be applied to the CMS Web Interface Measure Specifications for the 2021 MIPS performance period. The CMS Web Interface Specifications for the 2021 MIPS performance period will reflect the 2020 CMS Web Interface Specifications.</p>

**D.18 Avoidance of Antibiotic Treatment in Adults With Acute Bronchitis**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0058 / N/A
<b>Quality#:</b>	116
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Efficiency and Cost Reduction
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	The percentage of adults 18–64 years of age with a diagnosis of acute bronchitis who were not prescribed or dispensed an antibiotic prescription.
<b>Substantive Change:</b>	<p><b>The title is revised from ‘Avoidance of Antibiotic Treatment in Adults With Acute Bronchitis’ to:</b> Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis.</p> <p><b>The description is revised to read:</b> The percentage of episodes for patients ages 3 months and older with a diagnosis of acute bronchitis/bronchiolitis that did not result in an antibiotic dispensing event.</p> <p><b>The instructions are revised to read:</b> This measure is to be submitted at each occurrence of acute bronchitis/bronchiolitis during the performance period. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure based on the services provided and the measure-specific denominator coding.</p> <p><b>The denominator is revised to read:</b> All patients aged 3 months or older with an outpatient, telephone visit, online assessment, observation visit or emergency department (ED) visit with a diagnosis of acute bronchitis/bronchiolitis during the measurement period.</p> <p><b>Updated denominator criteria:</b> Revised: Patients 3 months of age and older on date of encounter. Added: Diagnosis for bronchiolitis.</p> <p><b>Updated denominator exclusion:</b> Revised: 1. Outpatient, ED or Observation visits that result in an inpatient admission. Added: 2. Acute bronchitis/bronchiolitis episodes when the patient had a new or refill prescription of antibiotics (Table 1) in the 30 days prior to or on the episode date.</p> <p><b>The denominator note is revised to read:</b> Do not include outpatient, ED or observation visits that result in an inpatient admission. When an outpatient, ED or observation visit and an inpatient stay are billed on separate claims, the visit results in an inpatient stay when the outpatient/ED/observation date of service occurs on the day prior to the admission date or any time during the admission (admission date through discharge date). An outpatient, ED or observation visit billed on the same claim as an inpatient stay is considered a visit that resulted in an inpatient stay.</p> <p><b>The numerator instructions are revised to read:</b> For performance, the measure will be calculated as the number of patient encounters where antibiotics were neither prescribed nor dispensed on or within 3 days of the episode for acute bronchitis/bronchiolitis over the total number of encounters in the denominator (patients aged 3 months and older with an outpatient, telephone, online assessment, observation or ED visit for acute bronchitis/bronchiolitis). A higher score indicates appropriate treatment of patients with acute bronchitis/bronchiolitis (e.g., the proportion for whom antibiotics were not prescribed or dispensed on or 3 days after the encounter). Delayed prescriptions (where an antibiotic was prescribed and patient was instructed to delay taking the antibiotic) are considered “Performance Not Met”.</p> <p><b>Updated numerator instructions:</b> Added: Note: This list should be used when assessing antibiotic prescriptions for the denominator exclusion and numerator components. Removed "Norfloxacin" from Table 1 – Antibiotic Medications.</p>
<b>Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed the measure language be updated to reflect a broader denominator eligible population by revising the age to include all patients over 3 months of age as concerns regarding appropriate use of antibiotics are not limited to the adult population. This will allow for clinicians to report on both pediatric and adult patients. The title, description, instructions, and denominator are also being revised to include the diagnosis of bronchiolitis as denominator eligible to better align with the broadened age range as bronchiolitis is more commonly seen in babies and children. The diagnosis is clinically relevant to the intent of this measure. The denominator exclusion and denominator note are revised to better clarify that all visits resulting in an inpatient admission should be excluded as it may be clinically appropriate and warranted to treat them with antibiotics in accordance with appropriate care. The numerator instructions have been updated to align language with the denominator patient population updates, as well as to clarify that delayed prescriptions are still considered to be a “Performance Not Met” as the clinician is still prescribing or dispensing a prescription, which does not align with the measure’s intent.
We proposed a substantive change to the denominator; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state: All patients aged 3 months or older with an outpatient visit, telephone visit, online assessment, observation visit or emergency department (ED) visit with a

**D.19 Diabetes: Eye Exam**

Category	Description
<b>NQF # / eCQM NQF #:</b>	0055 / N/A
<b>Quality#:</b>	117
<b>CMS eCQM ID:</b>	CMS131v9
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy overlapping the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetics with no diagnosis of retinopathy overlapping the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period.
<b>Substantive Change:</b>	<p><b>Updated denominator exclusion: For the eCQM Specifications collection type:</b> Revised: Exclude patients 66 and older who are living long term in an institution for more than 90 consecutive days during the measurement period.</p> <p><b>Updated denominator exclusion logic: For the eCQM Specifications collection type:</b> Updated encounters so they are "on or" before the end of the measurement period. Updated the LTI exclusion to be 90 consecutive days. Changed the name of the under 81 exclusion definition to "FrailtyLTI.Advanced Illness and Frailty Exclusion Not Including Over Age 80".</p> <p><b>Updated denominator exclusion: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications:</b> Revised: Patients age 66 and older in Institutional Special Needs Plans (SNP) or residing in long-term care with a POS code 32, 33, 34, 54 or 56 for more than 90 consecutive days during the measurement period.</p> <p><b>Updated denominator exclusion: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types:</b> Added coding to identify patients with advanced illness and frailty.</p> <p><b>The numerator options are revised to read: For the MIPS CQM Specifications and Medicare Part B Claims Measure Specifications collection type:</b></p> <p><b>Performance Met:</b></p> <ul style="list-style-type: none"> <li>• Dilated retinal eye exam with interpretation by an ophthalmologist or optometrist documented and reviewed.</li> <li>• Dilated retinal eye exam with interpretation by an ophthalmologist or optometrist documented and reviewed; without evidence of retinopathy.</li> <li>• 7 standard field stereoscopic photos with interpretation by an ophthalmologist or optometrist documented and reviewed.</li> <li>• 7 standard field stereoscopic photos with interpretation by an ophthalmologist or optometrist documented and reviewed; without evidence of retinopathy.</li> <li>• Eye imaging validated to match diagnosis from 7 standard field stereoscopic photos results documented and reviewed.</li> <li>• Eye imaging validated to match diagnosis from 7 standard field stereoscopic photos results documented and reviewed, without evidence of retinopathy.</li> <li>• Low risk for retinopathy (no evidence of retinopathy in the prior year)*.</li> </ul> <p><b>Performance Not Met:</b></p> <ul style="list-style-type: none"> <li>• Dilated eye exam was not performed, reason not otherwise specified.</li> </ul> <p><b>Updated numerator options note: For the MIPS CQM Specifications and Medicare Part B Claims Measure Specifications collection type:</b> Removed: <b>**Note:</b> For Performance Year 2020 reporting, the Centers for Medicare &amp; Medicaid Services and the American Medical Association have approved the use of the 8P modifier with HCPCS codes to report the Performance Not Met numerator option for Quality ID #117.</p>
<b>Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed that the denominator exclusion language and logic be updated to clarify that, for the measure, long-term care will be defined as patients staying 90 consecutive days at the long-term care facility versus any 90 days within the performance period.</p> <p>Additionally, for the MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection types, we proposed adding applicable coding to better define the advanced illness and frailty patient population for the purposes of this measure. The numerator options are being updated to stratify numerator compliant patients into those who are complaint and those who are compliant with evidence of retinopathy. This granularity will give a better picture of the patient population and the percentage of those patients who did not have evidence of retinopathy, and may fall into low risk for retinopathy, for the purposes of this measure. The numerator option note associated with the "Performance Not Met" option is being removed as it will not be applicable as the numerator options are being updated.</p>
<b>Comment:</b>	One commenter supported the inclusion of this measure for 2021 MIPS participants, but urged CMS to ensure that application of the measure is consistent with NCQA's update to this measure in its 2021 measure set, namely, NCQA's clarification that "eye exam results read by a system that provides an artificial intelligence (AI) interpretation meet criteria," as stated in NCQA's changes to HEDIS MY 2020 and MY 2021. The commenter is concerned that, absent this clarification, there will be confusion for practitioners who participate in MIPS and read the measure to require an eye exam by an "eye care professional," as indicated in CMS' table of Previously Finalized Measures in the Family Medicine Set for MIPS measure Q117. Such a clarification would also be consistent with the American Diabetes Association (ADA) 2020 standards for diabetes care, which provide, "Artificial intelligence systems that detect more than mild diabetic retinopathy and diabetic macular edema authorized for use by the FDA represent an alternative to traditional screening approaches."
<b>Response:</b>	We support technology that enhances a clinician's ability to diagnosis and treat patients safely and efficiently. Annually, we collaborate with measure stewards to gather revisions and incorporate them into the MIPS quality measures to ensure the program reflects the most recent version of the specification. We

Category	Description
	<p>are not responsible to ensure the revisions provided by the measure steward align with specifications outside of MIPS. Additionally, there may be timing considerations for revisions to be updated within MIPS that did not allow the measure steward to align the MIPS version of the specification to the HEDIS specification. We believe that we captured the measure steward’s intent for this measure for this performance period. We believe by stratifying the numerator options, more granular data can be captured to discern between patients with and without evidence of retinopathy. This information may give insight into those patients with controlled blood sugar and those with uncontrolled blood sugar. We encourage the commenters to collaborate with the measure steward regarding the request of further stratification of the numerator for this measure to be considered for future years.</p> <p><b>Comment:</b> One commenter opposed the changes to the numerator for measure Q117. CMS proposed to add stratification to the “Performance Met” numerator option <i>only for the manual MIPS CQM and Medicare Part B Claims collection types</i>. The commenter stated that currently, “Performance Met” includes the following four options: G2102 Dilated retinal eye exam with interpretation by an ophthalmologist or optometrist documented and reviewed Or; G2103 Seven standard field stereoscopic photos with interpretation by an ophthalmologist or optometrist documented and reviewed Or; G2104 Eye imaging validated to match diagnosis from seven standard field stereoscopic photos results documented and reviewed; Or 3072F Low risk for retinopathy (no evidence of retinopathy in the prior year).</p> <p>CMS is proposing to add further stratification by dividing the first three of these current options into two each – one as currently written and a second with “; without evidence of retinopathy” added to the end of the option description. The commenter stated that not only is this information irrelevant to the measure, but CMS is also creating significant additional burden by nearly doubling the number of classifications that manual reporters must organize patients into in order to report the measure. This created burden on small and rural practices without an EHR, which also concerning due to COVID-19. The commenter urged CMS not to finalize this additional stratification of the numerator options for measure Q117.</p> <p><b>Response:</b> We support technology that enhances a clinician’s ability to diagnosis and treat patients safely and efficiently. Annually, we collaborate with measure stewards to gather revisions and incorporate them into the MIPS quality measures to ensure the program reflects the most recent version of the specification. We believe that we captured the measure steward’s intent for this measure for this performance period. **D.20 Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy - Diabetes or Left Ventricular Systolic Dysfunction (LVEF < 40%)**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0066 / N/A
<b>Quality#:</b>	118
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have diabetes OR a current or prior Left Ventricular Ejection Fraction (LVEF) < 40% who were prescribed ACE inhibitor or ARB therapy.
<b>Substantive Change:</b>	<b>Updated denominator criteria:</b> Added: Eligible coding for the additional patient encounter is identical to ‘Patient encounter during the performance period’ criteria.  <b>Updated denominator:</b> Added telehealth as eligible for all encounters.
<b>Steward:</b>	American Heart Association
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured. Additionally, we proposed to clarify the denominator eligible coding for the two visits necessary for denominator eligibility.
<b>Comment:</b> One commenter supported the addition of telehealth reporting for measure Q118.	
<b>Response:</b> We thank the commenter for supporting the addition of telehealth reporting for this measure.	
After consideration of public comments, we are finalizing the changes to measure Q118 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.

**D.22 Diabetes Mellitus: Diabetic Foot and Ankle Care, Peripheral Neuropathy – Neurological Evaluation**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0417 / N/A
<b>Quality#:</b>	126
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of diabetes mellitus who had a neurological examination of their lower extremities within 12 months.
<b>Substantive Change:</b>	<b>Updated denominator exception:</b> Added: Clinician documented that patient had medical reason for not performing lower extremity neurological exam.
<b>Steward:</b>	American Podiatric Medical Association
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add a denominator exception for patients with medical reasons for not performing a lower extremity neurological exam. As there may be instances where a patient is denominator eligible, however, a lower extremity neurological exam would not be reasonably performed due the presence of a burn, ulceration, or infection, for example. Adding this denominator exception allows the MIPS eligible clinician to exercise their clinical judgement as to when it is not feasible to perform a lower extremity neurological exam.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q126 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.23 Diabetes Mellitus: Diabetic Foot and Ankle Care, Ulcer Prevention – Evaluation of Footwear**

Category	Description
NQF # / eCQM NQF #:	0416 / N/A
Quality#:	127
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of diabetes mellitus who were evaluated for proper footwear and sizing.
Substantive Change:	<b>Updated denominator exclusion:</b> Added: Clinician documented that patient was not an eligible candidate for evaluation of footwear as patient is bilateral lower extremity amputee.
Steward:	American Podiatric Medical Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed to add a denominator exclusion for bilateral lower extremity amputee as this patient population is not applicable to this measure and should not be included in the denominator eligible patient population.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q127 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.24 Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan**

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	128
CMS eCQM ID:	CMS69v9
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a BMI documented during the current encounter or during the previous 12 months AND with a BMI outside of normal parameters, a follow-up plan is documented during the encounter or during the previous 12 months of the current encounter. Normal Parameters: Age 18 years and older BMI $\geq 18.5$ and $< 25$ kg/m <sup>2</sup> .
Substantive Change:	<p><b>The description is revised to read:</b> Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous 12 months AND who had a follow-up plan documented if most recent BMI was outside of normal parameters.</p> <p><b>Updated guidance: For the eCQM Specifications collection type:</b> Removed: Review the following to apply the Medical Reason exception criteria: The Medical Reason exception could include, but is not limited to, the following patients as deemed appropriate by the health care provider: * Elderly patients (65 or older) for whom weight reduction/weight gain would complicate other underlying health conditions such as the following examples:     * Illness or physical disability     * Mental illness, dementia, confusion     * Nutritional deficiency such as Vitamin/mineral deficiency * Patients in an urgent or emergent medical situation where time is of the essence and to delay treatment would jeopardize the patient's health status Revised: See denominator exception section for examples.</p> <p><b>Updated definition: For all collection types:</b> Added: Normal BMI Parameters – Age 18 years and older BMI <math>\geq 18.5</math> and <math>&lt; 25</math> kg/m<sup>2</sup> <b>For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types:</b> Revised: Not Eligible for BMI Calculation or Follow-Up Plan (Denominator Exclusion) – A patient is not eligible if one or more of the following reasons are documented: • Patients receiving palliative or hospice care on the date of the current encounter or any time prior to the current encounter • Patients who are pregnant on the date of the current encounter or any time during the measurement period prior to the current encounter</p> <p>Patients with no documented BMI or a documented BMI outside normal parameters and a documented reason for not completing BMI follow-up plan during the current encounter or within the previous 12 months of the current encounter (Denominator Exception) – • Patients with a documented medical reason for not documenting BMI or for not documenting a follow-up plan for a BMI outside normal parameters (e.g., elderly patients (65 or older) for whom weight reduction/weight gain would complicate other underlying health conditions such as illness or physical disability, mental illness, dementia, confusion, or nutritional deficiency such as vitamin/mineral deficiency; patients in an urgent or emergent medical situation where time is of the essence and to delay treatment would jeopardize the patient's health status) • Patients who refuse measurement of height and/or weight on the date of the current encounter or any time during the measurement period prior to the current encounter</p> <p><b>Updated denominator exclusion: For the eCQM Specifications collection type:</b> Removed: Patients who refuse measurement of height and/or weight. Added: Hospice care value sets</p> <p><b>Updated denominator exception:</b> <b>For the eCQM Specifications collection type:</b> Added: Patients who refuse measurement of height and/or weight. Revised: Patients with a documented medical reason for not documenting BMI or for not documenting a follow-up plan for a BMI outside normal parameters (e.g., elderly patients (65 or older) for whom weight reduction/weight gain would complicate other underlying health conditions such as illness or physical disability, mental illness, dementia, confusion, or nutritional deficiency such as vitamin/mineral deficiency; patients in an urgent or emergent medical situation where time is of the essence and to delay treatment would jeopardize the patient's health status). <b>For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection type:</b> Added: BMI not documented due to medical reason OR patient refusal of height or weight measurement.</p>

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

Category	Description
	<p><b>Per the ‘Telehealth Guidance for Electronic Clinical Quality Measures (eCQMs) for Eligible Professional/Eligible Clinician 2021 Quality Reporting’:</b> Medicare telehealth eligible codes found in any encounter value set must only be used for in-person encounters for the following eCQMs.</p>
<b>Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to update the measure description language to reduce redundancy throughout the specification and clarify the intent. The guidance for the eCQM Specifications collection type was updated to move the medical reason exception language to the denominator exceptions header as this language is more suitable for this field. The definition for “Normal BMI Parameters” was moved to the definition section as it is more applicable here and helps readability. During the change review process, the patient refusal denominator exclusion was moved to the denominator exception. We agreed that patient refusal is more appropriately classified as a denominator exception as the patient would still be denominator eligible. For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection type, the definitions for the denominator exclusion and denominator exception were updated to reflect the changes and to align language across collection types. Additionally, a denominator exception was added to reflect the definition revisions and capture patients for whom BMI was not documented due to medical reasons or patient refusal.</p> <p>We proposed to remove telehealth encounters from the denominator of the eCQM Specifications collection type as telehealth is not an appropriate setting for this measure, as well as to align with the other collection types. This guidance can be found in a separate document that will be published on the eCQI Resource Center.</p>
<p>We proposed a substantive change to the description; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state:                      Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if most recent BMI was outside of normal parameters.</p> <p>This additional refinement of spelling out of the number 12 does not affect the intent of the proposed substantive change.</p> <p><b>Comment:</b> One commenter indicated that the BMI range is too narrow (60 percent US adults is above 25) and is not practical as many practitioners do not begin to discuss weight management with patients until the BMI is around 29. Widening the BMI range will begin to capture the a more targeted population. The commenter asked stated that higher BMI ranges get consumed with other conditions so weight is not addressed for the BMI alone but for co-existing conditions (diabetes, GI etc.). The commenter recommended that an exclusion be provided for other conditions involving weight management.</p> <p><b>Response:</b> We thank the commenter for their comment. As the measure steward, we will take this feedback into consideration during the annual revisions for possible implementation in future years. Part of the Meaningful Measures Initiative is to align with current medical guidelines and implementing measures the drive quality care, reduce risk factors, and promote positive patient outcomes.</p> <p><b>Comment:</b> One commenter stated that measure Q128 requires clinicians to measure patients’ height and weight and establish a goal. However, significant weight loss is unreasonable during the relatively short length of stay for patients requiring rehabilitation services. The collection of this information therefore serves no role for the patient during their course of care and in the calculation of Medicare’s payment for therapy services.</p> <p><b>Response:</b> We thank the commenter for their comment. We agree that a patient may not have enough time to experience significant weight loss while receiving rehabilitation services. Although, the intent of the measure is provide a follow-up plan for patients that have a body mass index (BMI) outside normal parameters. The follow-up may include a referral to, for example, a Registered Dietitian Nutritionist (RDN), occupational therapist, physical therapist, primary care provider, exercise physiologist, mental health professional, or surgeon), for lifestyle/behavioral therapy and/or exercise counseling which could support the patient after discharge from rehabilitation services.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q128 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.25 Documentation of Current Medications in the Medical Record**

Category	Description
NQF # / eCQM NQF #:	0419 / 0419e
Quality#:	130
CMS eCQM ID:	CMS68v10
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of visits for patients aged 18 years and older for which the MIPS eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter. This list <b>must</b> include ALL known prescriptions, over-the-counters, herbals, and vitamin/mineral/dietary (nutritional) supplements AND <b>must</b> contain the medications' name, dosage, frequency and route of administration.
Substantive Change:	<p><b>The description is revised to read: For all collection types:</b> Percentage of visits for patients aged 18 years and older for which the eligible professional or eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.</p> <p><b>The guidance is revised to read: For the eCQM Specifications collection type:</b> This eCQM is an episode-based measure. This measure is to be reported for every encounter during the measurement period. Eligible professionals or eligible clinicians reporting this measure may document medication information received from the patient, authorized representative(s), caregiver(s) or other available healthcare resources. This list must include all known prescriptions, over-the-counter (OTC) products, herbals, vitamins, minerals, dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration. This measure should also be reported if the eligible professional or eligible clinician documented the patient is not currently taking any medications. By reporting the action described in this measure, the provider attests to having documented a list of current medications utilizing all immediate resources available at the time of the encounter. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (<a href="https://ecqi.healthit.gov/qdm">https://ecqi.healthit.gov/qdm</a>) for more information on the QDM.</p> <p><b>The denominator exception is revised to read: For the eCQM Specifications collection type:</b> Documentation of a medical reason(s) for not documenting, updating, or reviewing the patient's current medications list (e.g., patient is in an urgent or emergent medical situation where time is of the essence and to delay treatment would jeopardize the patient's health status).</p> <p><b>The numerator is revised to read: For all collection types:</b> Eligible professional or eligible clinician attests to documenting, updating or reviewing the patient's current medications using all immediate resources available on the date of the encounter.</p> <p><b>Updated numerator note: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types:</b> Added: This list must include ALL known prescriptions, over-the-counter (OTC) products, herbals, vitamins, minerals, dietary (nutritional) supplements AND must contain the medications' name, dosage, frequency and route of administration.</p> <p><b>Updated denominator exception: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection type:</b> Revised: Documentation of a medical reason(s) for not documenting, updating, or reviewing the patient's current medications list (e.g., patient is in an urgent or emergent medical situation).</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to update the measure description to remove language that is more appropriate for the guidance/notes sections of the measure specification. This will help with measure intent, clarity, and readability. The guidance for the eCQM Specifications collection type has been updated to clarify the intent of the measure. The intent is to document all known prescriptions, since the measure steward believes that MIPS eligible clinician should not be held accountable for information that is not available utilizing all immediate resources. The denominator exception was updated in all collection types to add clarity regarding use of the denominator exception and to align the language throughout the specification. The numerator notes for the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types was updated with information removed from the description. This information outlines what is necessary for numerator compliance and is better suited for the numerator notes section for ease of use.
Comment:	One commenter supported CMS's proposal to update the measure description to clarify that clinicians must only document all known medications and that clinicians should not be held accountable for information that is not available utilizing all immediate resources. This clarification will decrease burden on MIPS eligible clinicians reporting this measure.
Response:	We thank the commenter for supporting the change to this measure.
Comment:	One commenter stated that inclusion of the Dialysis SNOMED code creates a burden for Nephrology providers who report this measure. The commenter urged CMS to consider creating a denominator exclusion for measure Q130 (CMS 68v10) for patients who are undergoing dialysis, OR remove the current dialysis SNOMED code from the measure's value set.
	The 2020 eCQM Specification for this measure states that the initial population for this measure includes "All visits occurring during the 12-month measurement period for patients aged 18 years and older" (a). Additionally, the "Encounter to Document Medications" Value Set currently included in the measure includes SNOMED code 385973000 - Dialysis care management (procedure). The consequence of using this SNOMED code is that any patients who are undergoing dialysis are eligible for the measure each time they have a Dialysis visit. Clinically, dialysis patients have eligible encounters multiple times a week and it is

Category	Description
	<p>Patient Reason(s) Patient refuses to participate OR Medical Reason(s) Documentation of medical reason for not screening patient for depression (e.g., cognitive, functional, or motivational limitations that may impact accuracy of results; patient is in an urgent or emergent situation where time is of the essence and to delay treatment would jeopardize the patient’s health status)</p> <p><b>Updated denominator exclusion definition: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection type:</b> Revised: Not Eligible for Depression Screening or Follow-Up Plan (Denominator Exclusion) Patients who have been diagnosed with bipolar disorder- F31.10, F31.11, F31.12, F31.13, F31.2, F31.30, F31.31, F31.32, F31.4, F31.5, F31.60, F31.61, F31.62, F31.63, F31.64, F31.70, F31.71, F31.72, F31.73, F31.74, F31.75, F31.76, F31.77, F31.78, F31.81, F31.89, F31.9 Patients who have been diagnosed with depression-- F01.51, F32.0, F32.1, F32.2, F32.3, F32.4, F32.5, F32.89, F32.9, F33.0, F33.1, F33.2, F33.3, F33.40, F33.41, F33.42, F33.8, F33.9, F34.1, F34.81, F34.89, F43.21, F43.23, F53.0, F53.1, O90.6, O99.340, O99.341, O99.342, O99.343, O99.345</p> <p><b>The guidance is revised to read: For the eCQM Specifications collection type:</b> A depression screen is completed on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan must be documented on the date of the encounter, such as referral to a practitioner who is qualified to treat depression, pharmacological interventions or other interventions for the treatment of depression. This eCQM is a patient-based measure. Depression screening is required once per measurement period, not at all encounters. The intent of the measure is to screen for depression in patients who have never had a diagnosis of depression or bipolar disorder prior to the eligible encounter used to evaluate the numerator. Patients who have ever been diagnosed with depression or bipolar disorder will be excluded from the measure. Screening Tools: * An age-appropriate, standardized, and validated depression screening tool must be used for numerator compliance. * The name of the age-appropriate standardized depression screening tool utilized must be documented in the medical record * The depression screening must be reviewed and addressed in the office of the provider, filing the code, on the date of the encounter. Positive pre-screening results indicating a patient is at high risk for self-harm should receive more urgent intervention as determined by the provider practice * The screening should occur during a qualifying encounter or up to 14 days prior to the date of the qualifying encounter * The measure assesses the most recent depression screening completed either during the eligible encounter or within the 14 days prior to that encounter. Therefore, a clinician would not be able to complete another screening at the time of the encounter to count towards a follow-up, because that would serve as the most recent screening. To satisfy the follow-up requirement for a patient screening positively, the eligible clinician would need to provide one of the aforementioned follow-up actions, which does not include use of a standardized depression screening tool Follow-Up Plan: The follow-up plan must be related to a positive depression screening, for example: "Patient referred for psychiatric evaluation due to positive depression screening." Examples of a follow-up plan include but are not limited to: * Referral to a practitioner or program for further evaluation for depression, for example, referral to a psychiatrist, psychologist, social worker, mental health counselor, or other mental health service such as family or group therapy, support group, depression management program, or other service for treatment of depression * Other interventions designed to treat depression such as behavioral health evaluation, psychotherapy, pharmacological interventions, or additional treatment options Should a patient screen positive for depression, a clinician should opt to complete a suicide risk assessment when appropriate and based on individual patient characteristics. However, for the purposes of this measure, a suicide risk assessment or additional screening using a standardized tool will not qualify as a follow-up plan. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (<a href="https://ecqi.healthit.gov/qdm">https://ecqi.healthit.gov/qdm</a>) for more information on the QDM.</p> <p><b>Updated denominator criteria: For the Medicare Part B Claims Measures Specifications and the MIPS CQMs Specifications collection types:</b> Revised: Patients aged ≥ 12 years. <b>For the eCQM Specifications collection type:</b> Added physical therapy MIPS eligible clinician.</p> <p><b>Updated denominator note: For the Medicare Part B Claims Measures Specifications and the MIPS CQMs Specifications collection types:</b> Added: The intent of the measure is to screen for depression in patients who have never had a diagnosis of depression or bipolar disorder prior to the eligible encounter used to evaluate the numerator. Patients who have ever been diagnosed with depression or bipolar disorder will be excluded from the measure.</p> <p><b>Updated denominator exclusion:</b> <b>For the eCQM Specifications collection type:</b> Revised: Patients who have been diagnosed with depression or with bipolar disorder. <b>For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection type:</b> Revised: Documentation stating the patient has had a diagnosis of depression or has had a diagnosis of bipolar disorder.</p>

Category	Description
	<p><b>Updated numerator: For the eCQM Specifications collection type:</b> Removed additional evaluation or assessment for depression and suicide risk assessment as follow-up from the measure in header and from technical specifications and add guidance statement regarding suicide risk assessment.</p> <p><b>The numerator instruction is revised to read: For the Medicare Part B Claims Measures Specifications collection type and the MIPS CQM Specifications collection type:</b> A depression screen is completed on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan must be documented on the date of the encounter, such as referral to a practitioner who is qualified to treat depression, pharmacological interventions or other interventions for the treatment of depression. Depression screening is required once per measurement period, not at all encounters. An age-appropriate, standardized, and validated depression screening tool must be used for numerator compliance. The name of the age-appropriate standardized depression screening tool utilized must be documented in the medical record. The depression screening must be reviewed and addressed in the office of the provider on the date of the encounter. Positive pre-screening results indicating a patient is at high risk for self-harm should receive more urgent intervention as determined by the provider practice. The screening should occur during a qualifying encounter or up to 14 days prior to the date of the qualifying encounter.</p> <p>The measure assesses the most recent depression screening completed either during the eligible encounter or within the 14 days prior to that encounter. Therefore, a clinician would not be able to complete another screening at the time of the encounter to count towards a follow-up, because that would serve as the most recent screening. To satisfy the follow-up requirement for a patient screening positively, the eligible clinician would need to provide one of the aforementioned follow-up actions, which does not include use of a standardized depression screening tool.</p> <p>Should a patient screen positive for depression, a clinician should opt to complete a suicide risk assessment when appropriate and based on individual patient characteristics. However, for the purposes of this measure, a suicide risk assessment or additional screening using a standardized tool, will not qualify as a follow-up plan.</p>
<b>Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to update the description to provide clarity and better align with the measure intent. We proposed to update the measure language in the definitions, guidance, and numerator note sections to provide clarity as to what constitutes a follow-up plan. The measure assesses the most recent depression screening completed either during the eligible encounter or within the 14 days prior to that encounter. Therefore, a clinician would not be able to complete another screening at the time of the encounter to count towards a follow-up, since that would serve as the most recent screening. To satisfy the follow-up requirement for a patient screening positively, the eligible clinician would need to provide one of the aforementioned follow-up actions, which does not include use of a standardized depression screening tool. Additionally, suicide risk assessments have been removed as a numerator compliant follow-up plan option as this should be completed when appropriate and based on the assessment by the clinician regarding the severity of the patient’s symptoms of depression at the time of depression screening. We also proposed to update the measure language and denominator exclusions to reflect that this measure is screening of depression for patients who have not been previously diagnosed or have an active diagnosis of depression or bipolar disorder. This preventive measure assesses screening and follow up plan for patients that are screened positive for depression. We also proposed to update the denominator criteria for the Medicare Part B Claims Measure Specifications and the MIPS CQM Specifications collection types to align with the measure denominator language which states patients age 12 or older at the beginning of the measurement period.</p> <p>Additionally, we proposed to add the physical therapy MIPS eligible clinician type based on stakeholder feedback regarding the applicability of this measure to this clinician type.</p> <p>We proposed to remove the CMS Web Interface Measure Specifications collection type. This collection type was proposed to be sunset for the purposes of MIPS starting with the 2021 performance year. We have determined it is not fiscally viable, feasible, or sustainable for MIPS to continue this collection type/submission type due to an 80 percent reduction and a continued decrease in interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures. For further rationale, please see section IV.A.3.c.(1)(c) of this final rule.</p>
	<p>We proposed a substantive change to the numerator instruction for the Medicare Part B Claims Measures Specifications collection type and the MIPS CQM Specifications collection type; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state:</p> <p>A depression screen is completed on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan must be documented on the date of the encounter, such as referral to a practitioner who is qualified to treat depression, pharmacological interventions or other interventions for the treatment of depression. Depression screening is required once per measurement period, not at all encounters. An age-appropriate, standardized, and validated depression screening tool must be used for numerator compliance. The name of the age-appropriate standardized depression screening tool utilized must be documented in the medical record. The depression screening must be reviewed and addressed in the office of the provider on the date of the encounter. Positive pre-screening results indicating a patient is at high risk for self-harm should receive more urgent intervention as determined by the provider practice. The screening should occur during a qualifying encounter or up to 14 days prior to the date of the qualifying encounter.</p> <p>The measure assesses the most recent depression screening completed either during the eligible encounter or within the 14 days prior to that encounter. Therefore, a clinician would not be able to complete another screening at the time of the encounter to count towards a follow-up, because that would serve as the most recent screening. In order to satisfy the follow-up requirement for a patient screening positively, the eligible clinician would need to provide one of the aforementioned follow-up actions, which does not include use of a standardized depression screening tool.</p> <p>Should a patient screen positive for depression, a clinician should opt to complete a suicide risk assessment when appropriate and based on individual patient characteristics. However, for the purposes of this measure, a suicide risk assessment or additional screening using a standardized tool, will not qualify as a follow-up plan.</p> <p>This additional refinement of adding ‘In order’ prior to ‘to satisfy’ does not affect the intent of the proposed substantive change.</p>

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

Category	Description
	<p><b>Comment:</b> One commenter cited follow-up plan may not follow provider workflow. For example, an EHR software may capture the date the order was signed which may be signed by the provider the next day (not the day of the order). The commenter recommended that grace period be allowed for providers to get caught up with paper work (1 to 3 days after the encounter).</p>
	<p><b>Response:</b> We thank the commenter for their comment. As the measure steward, we will take this feedback into consideration during the annual revisions for possible implementation in future years.</p>
	<p><b>Comment:</b> One commenter agreed with the proposal to remove suicide risk assessment from a numerator option. A suicide risk assessment is a screening tool, and if needed, should be done at the initial screening point, rather than a follow up.</p>
	<p><b>Response:</b> We thank the commenter for supporting the change to this measure.</p>
	<p>After consideration of public comments, we are finalizing the changes to measure Q134 as indicated for the 2021 MIPS performance period/2023 MIPS payment year and future years with the exception of the CMS Web Interface Specifications collection type. At § 414.1305, we proposed to modify the definition of the terms collection type and submission type by removing the CMS Web Interface Specifications as an available option starting with the 2023 payment year (85 FR 50290); however, the CMS Web Interface Measure Specifications collection type will be an available option for an extension of one additional year (2021 MIPS performance period/2023 MIPS payment year) and will be removed as a collection and submission type starting with the 2022 MIPS performance period/2024 MIPS payment year. None of the substantive changes above will be applied to the CMS Web Interface Measure Specifications for the 2021 MIPS performance period. The CMS Web Interface Measure Specifications for the 2021 MIPS performance period will reflect the 2020 CMS Web Interface Measure Specifications. For this measure, we note that 2020 CMS Web Interface Measure Specifications included the following change, Numerator/Numerator Codes/Numerator Drug Codes: Follow-up Plan (For Positive Screen) REMOVED ADDITIONAL_EVAL_CODE SNM. Such change is applicable for the 2021 MIPS performance period/2023 MIPS payment year given that the 2021 CMS Web Interface Measure Specifications reflect the 2020 CMS Web Interface Measure Specifications. Also, it should be noted that the CMS Web Interface Specifications collection type is not able to establish a benchmark for this measure. Thus, this measure will be excluded from the Merit-based Incentive Payment System (MIPS) scoring in accordance with § 414.1380(b)(1)(i)(A)(2)(i) provided that the measure meets the data completeness requirement and the data applicable to the measure is reported via the CMS Web Interface Measure Specifications.</p>

**D.28 Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 15% OR Documentation of a Plan of Care**

Category	Description
<b>NQF # / eCQM NQF #:</b>	0563 / N/A
<b>Quality#:</b>	141
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) whose glaucoma treatment has not failed (the most recent IOP was reduced by at least 15% from the pre-intervention level) OR if the most recent IOP was not reduced by at least 15% from the pre-intervention level, a plan of care was documented within the 12-month performance period.
<b>Substantive Change:</b>	<b>Modified collection type:</b> MIPS CQMs Specifications
<b>Steward:</b>	American Academy of Ophthalmology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Outcome
<b>Rationale:</b>	We proposed to remove the Medicare Part B Claims Measure Specifications as it shows very high performance year after year leaving little opportunity to drive improvement in quality outcomes. However, the benchmarking data continues to show a gap for the MIPS CQMs Specifications collection type, as such, the measure will be retained for this collection type.
<b>Comment:</b>	One commenter opposed CMS’s proposal to remove the claims collection type from measure Q141. Removal of the measure from claims would adversely impact ophthalmologists, particularly those in small and rural practices who must rely on the claims reporting collection type because they cannot afford to adopt CEHRT. The commenter recognized that this measure is topped out under the claims collection type, but clinicians reporting these measures are already limited in the number of points they can receive for this measure.
<b>Response:</b>	We understand that ensuring there are measures available for small and rural practices is important; however, we strive to ensure that all measures align with the Meaningful Measures Initiative. After careful considerations, we will maintain the Medicare Part B Claims Measure Specifications collection type for consistency and stability as it is not extremely topped out and still in alignment with guidelines, but may consider removal in the future.
	After consideration of public comments, we are not finalizing the changes to measure Q141 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.

**D.29 Oncology: Medical and Radiation – Pain Intensity Quantified**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0384 / 0384e
<b>Quality#:</b>	143
<b>CMS eCQM ID:</b>	CMS157v9
<b>National Quality Strategy Domain:</b>	Person and Caregiver-Centered Experience and Outcomes
<b>Current Collection Type:</b>	eCQM Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patient visits, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy in which pain intensity is quantified.
<b>Substantive Change:</b>	<p><b>Updated logic: For the eCQM Specifications collection type:</b> Revised logic to limit the date range for chemotherapy administered within 31 days before and after the measurement period. Added definition: Chemotherapy within 30 days Prior and After the Measurement Period.</p> <p><b>The guidance is revised to read: For the eCQM Specifications collection type:</b> This eCQM is an episode-of-care measure; the level of analysis for this measure is every visit for patients with a diagnosis of cancer who are also currently receiving chemotherapy or radiation therapy during the measurement period. For patients receiving radiation therapy, pain intensity should be quantified at each radiation treatment management encounter where the patient and physician have a face-to-face interaction. Due to the nature of some applicable coding related to radiation therapy (e.g., delivered in multiple fractions), the billing date for certain codes may or may not be the same as the face-to-face encounter date. In this instance, for the reporting purposes of this measure, the billing date should be used to pull the appropriate patients into the initial population. It is expected, though, that the numerator criteria would be performed at the time of the actual face-to-face encounter during the series of treatments. A lookback (retrospective) period of 7 days, including the billing date, may be used to identify the actual face-to-face encounter, which is required to assess the numerator. Therefore, pain intensity should be quantified during the face-to-face encounter occurring on the actual billing date or within the 6 days prior to the billing date. For patients receiving chemotherapy, pain intensity should be quantified at each face-to-face encounter with the physician while the patient is currently receiving chemotherapy. For purposes of identifying eligible encounters, patients "currently receiving chemotherapy" refers to patients administered chemotherapy within 30 days prior to the encounter AND administered chemotherapy within 30 days after the date of the encounter. Pain intensity should be quantified using a standard instrument, such as a 0-10 numerical rating scale, visual analog scale, a categorical scale, or pictorial scale. Examples include the Faces Pain Rating Scale and the Brief Pain Inventory (BPI). This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (<a href="https://ecqi.healthit.gov/qdm">https://ecqi.healthit.gov/qdm</a>) for more information on the QDM.</p> <p><b>Updated Instructions: For the MIPS CQM Specifications collection type:</b> Revised note to reflect both face-to-face and telehealth encounters are allowed.</p> <p><b>The denominator note is revised to read: For the MIPS CQMs Specifications collection type:</b> For the reporting purposes for this measure, in instances where CPT code 77427 is reported, the billing date, which may or may not be the same date as the face-to-face or telehealth encounter with the physician, should be used to pull the appropriate patient population into the denominator. It is expected, though, that the numerator criteria would be performed at the time of the actual face-to-face or telehealth encounter during the series of treatments. A lookback (retrospective) period of 7 days, including the billing date, may be used to identify the actual face-to-face or telehealth encounter, which is required to assess the numerator. Therefore, pain intensity should be quantified during the face-to-face or telehealth encounter occurring on the actual billing date or within the 6 days prior to the billing date.</p> <p><b>Updated denominator: For all collection types:</b> Added telehealth as eligible encounter.</p>
<b>Steward:</b>	American Society of Clinical Oncology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to update the logic within the eCQM Specifications collection type to limit the range of time for chemotherapy procedures to only capture the chemotherapy procedures that satisfy the measure requirements. This will decrease implementation burden for some MIPS eligible clinicians while improving reporting capabilities for some practices. Additionally, the eCQM Specifications and MIPS CQMs Specifications collection types the guidance/denominator note was proposed to be revised to allow for a lookback period when utilizing CPT codes that may not have the same billing and encounter date. This will align more closely with actual clinical workflow and encounter billing practices.</p> <p>We proposed to add telehealth encounters as denominator eligible for submission criteria 1 as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>
<b>Comment:</b>	One commenter indicated that the rationale included in the 2021 PFS proposed rule for Table D.29 should be corrected to read: "We propose to add telehealth encounters as denominator eligible for submission criteria 1 and 2 as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured." Another commenter supported the addition of telehealth reporting for this measure.
<b>Response:</b>	We thank the commenter for their comment regarding telehealth for measure Q143. As currently specified for PY 2020, the measure allows for telehealth visits for denominator submission criteria two, but contains a telehealth exclusion for denominator submission criteria one. For PY2021, we proposed to allow for telehealth as an eligible encounter for submission criteria one so both submission criteria will allow for telehealth encounters to ensure a complete patient population is captured for assessment of the quality action.

**D.30 Oncology: Medical and Radiation - Plan of Care for Pain**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0383 / N/A
<b>Quality#:</b>	144
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Person and Caregiver-Centered Experience and Outcomes
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain.
<b>Substantive Change:</b>	<p><b>Updated instructions:</b> Added: THERE ARE TWO SUBMISSION CRITERIA FOR THIS MEASURE: 1) All visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy who report having pain OR 2) All visits for patients, regardless of age, with a diagnosis of cancer currently receiving radiation therapy who report having pain</p> <p><b>The denominator is revised to read:</b> Submission Criteria 1: All visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy who reporting having pain Denominator (Submission Criteria 1): All visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy who report having pain Submission Criteria 2: All visits for patients, regardless of age, with a diagnosis of cancer currently receiving radiation therapy who report having pain Denominator (Submission Criteria 2): All visits for patients, regardless of age, with a diagnosis of cancer currently receiving radiation therapy who report having pain</p> <p><b>Updated denominator: For all collection types:</b> Added telehealth as eligible encounter.</p> <p><b>Updated denominator criteria:</b> Revised: Submission Criteria One</p> <ul style="list-style-type: none"> <li>Removed coding for radiation therapy</li> </ul> <p>Submission Criteria Two</p> <ul style="list-style-type: none"> <li>Added coding for cancer diagnosis</li> <li>Added coding for patient procedure</li> </ul> <p><b>Updated denominator note: For Submission Criteria Two:</b> Added: For the reporting purposes of this measure, in instances where CPT code77427 is reported, the billing date, which may or may not be the same date as the face-to-face or telehealth encounter with the physician, should be used to pull the appropriate patient population into the denominator. It is expected, though, that the numerator criteria would be performed at the time of the actual face-to-face encounter during the series of treatments.</p> <p><b>The numerator is revised to read:</b> NUMERATOR (SUBMISSION CRITERIA 1): Patient visits that included a documented plan of care to address pain. NUMERATOR (SUBMISSION CRITERIA 2): Patient visits that included a documented plan of care to address pain.</p> <p><b>Updated numerator instructions: For Submission Criteria Two:</b> Added: A documented plan of care may include: use of opioids, nonopioid analgesics, psychological support, patient and/or family education, referral to a pain clinic, or reassessment of pain at an appropriate time interval.</p> <p><b>Updated numerator options: For Submission Criteria Two:</b> Added: <b>Performance Met:</b> Plan of care to address pain documented <b>Performance Not Met:</b> Plan of care for pain not documented, reason not otherwise specified</p>
<b>Steward:</b>	American Society of Clinical Oncology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to separate the measure into two submission criteria based upon treatment to add clarity based on stakeholder feedback. This also aligns the measure with the format of measure Q143: Oncology: Medical and Radiation – Pain Intensity Quantified. The patient procedure coding was updated to ensure only coding applicable to the updated submission criteria is included within the denominator criteria.</p> <p>We proposed to add telehealth encounters as denominator eligible for submission criteria 1 as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>
<p>We proposed a substantive change to the denominator note for submission criteria two; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state: For the reporting purposes of this measure, in instances where CPT code77427 is reported, the billing date, which may or may not be the same date as the face-to-face or telehealth encounter with the physician, should be used to pull the appropriate patient population into the denominator. It is expected, though, that the</p>

**D.31 Radiology: Exposure Dose Indices or Exposure Time and Number of Images Reported for Procedures Using Fluoroscopy**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	145
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Patient Safety
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Final reports for procedures using fluoroscopy that document radiation exposure indices, or exposure time and number of fluorographic images (if radiation exposure indices are not available).
<b>Substantive Change:</b>	<b>Updated numerator instructions: For all collection types:</b> Added: Documentation: Information populating the final report may reside in a dedicated field in the electronic health record (EHR) or picture archiving and communication system (PACS), however fluoroscopy exposure dose or time should be included in the final report to be readily accessible in all circumstances.
<b>Steward:</b>	American College of Radiology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the denominator criteria encounter coding to ensure that all of the codes are associated with fluoroscopy and to create a more complete patient population. Additionally, we proposed to add numerator instructions to further clarify how the fluoroscopy information should be recorded in the final report to be numerator compliant and meet the intent of the measure.
<p>We proposed a substantive change to the numerator instructions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state: Documentation: Information populating the final report may reside in a dedicated field in the electronic health record (EHR) or picture archiving and communication system (PACS), however fluoroscopy exposure dose or time should be included in the final report in order to be readily accessible in all circumstances. This additional refinement does not affect the intent of the proposed substantive change.</p> <p><b>Comment:</b> One commenter recognized the changes to measure Q145 without issue. A second commenter supported the changes as they better fit the intent of the measure and will lessen clinical burden to some extent.</p> <p><b>Response:</b> We thank the commenters for supporting the changes to this measure.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q145 as indicated for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

**D.32 Nuclear Medicine: Correlation with Existing Imaging Studies for All Patients Undergoing Bone Scintigraphy**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	147
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of final reports for all patients, regardless of age, undergoing bone scintigraphy that include physician documentation of correlation with existing relevant imaging studies (e.g., x-ray, Magnetic Resonance Imaging (MRI), Computed Tomography (CT), etc.) that were performed.
<b>Substantive Change:</b>	<b>The denominator is revised to read: For all collection types:</b> All final reports for patients, regardless of age, undergoing bone planar and whole body scintigraphy.
<b>Steward:</b>	Society of Nuclear Medicine and Molecular Imaging
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the denominator to account for encounter codes that can be utilized for imaging other than bone scintigraphy. This will narrow the eligible patient population to those using bone imaging agents and only assess MIPS eligible clinicians that are relevant to this measure's intent.
<p><b>Comment:</b> One commenter supported the changes to measure Q147 as they better fit the intent of this measure and will lessen clinical burden to some extent.</p> <p><b>Response:</b> We thank the commenter for supporting the changes to this measure.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q147 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.33 Rheumatoid Arthritis (RA): Tuberculosis Screening**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	176
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have documentation of a tuberculosis (TB) screening performed and results interpreted within 12 months prior to receiving a first course of therapy using a biologic disease-modifying anti-rheumatic drug (DMARD).
<b>Substantive Change:</b>	<p><b>The title is revised from ‘Rheumatoid Arthritis (RA): Tuberculosis Screening’ to:</b> Tuberculosis Screening Prior to First Course Biologic Therapy</p> <p><b>The description is revised to read:</b> If a patient has been newly prescribed a biologic disease-modifying anti-rheumatic drug (DMARD) therapy, then the medical record should indicate TB testing in the preceding 12-month period.</p> <p><b>The instructions are revised to read:</b> This measure is to be submitted a minimum of once per performance period for patients who are being considered or prescribed a first course of biologic disease-modifying anti-rheumatic drug therapy seen during the performance period. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure based on the services provided and the measure-specific denominator coding.</p> <p><b>The denominator is revised to read:</b> All patients aged 18 years and older who are receiving a first course of therapy using a biologic DMARD.</p> <p><b>The denominator instructions are updated to read:</b> Patients are considered to be receiving a first course of therapy using a biologic DMARD only if they have been prescribed DMARD biologic therapy during the measurement period and were not prescribed DMARD biologic therapy in the 12 months preceding the encounter where DMARD biologic therapy was newly started. Biologic DMARD therapy includes:-Abatacept (Orencia) -Adalimumab (HUMIRA) -Anakinra (Kineret) -Baricitinib (Olumiant) -Canakinumab (ILARIS) -Certolizumab pegol and lyophilized certolizumab pegol (CIMZIA) -Denosumab (Prolia) - Etanercept (Enbrel) -Golimumab (Simponi) -Infliximab (REMICADE) -Infliximab-dyyb (Inflectra) -Infliximab-abda (Renflexis) -Sarilumab (KEVZARA) -Secukinumab (Cosentyx) -Tocilizumab (ACTEMRA) -Tofacitinib (XELJANZ) -Ustekinumab (STELARA) The list of biologic DMARD therapies is subject to change as new therapies are approved by the FDA.</p> <p><b>Updated denominator criteria:</b> Removed: ‘Diagnosis for RA’ criteria Revised: Patient receiving first-time biologic disease modifying anti-rheumatic drug therapy</p> <p><b>Updated denominator:</b> Added telehealth as eligible encounter.</p> <p><b>The numerator is revised to read:</b> Patients for whom any record of TB testing is documented or performed (PPD, IFN-gamma release assays, or other appropriate method) in the medical record in the 12 months preceding the biologic prescription.</p> <p><b>Updated numerator definition:</b> Removed ‘Biologic DMARD Therapy’ definition.</p> <p><b>Updated numerator options:</b> Revised: <b>Performance Met:</b> TB screening performed and results interpreted within 12 months prior to initiation of first-time biologic disease modifying anti-rheumatic drug therapy.</p>
<b>Steward:</b>	American College of Rheumatology
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to expand the measure to remove disease specificity from the measure to assess all patients prescribed a first course biologic DMARD therapy. This will expand monitoring of patient safety guidance compliance to all patients initiating DMARD therapy. The language throughout the measure has been updated to align with the change in patient population.</p> <p>We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>
<p>We proposed a substantive change to the denominator instructions; however, during review of this proposed substantive change, there was additional language refinement. Therefore, we are finalizing the substantive change to state: Patients are considered to be receiving a first course of therapy using a biologic DMARD only if they have been prescribed DMARD biologic therapy during the measurement period and were not prescribed DMARD biologic therapy in the 12 months preceding the encounter where DMARD biologic therapy was newly started. Biologic DMARD therapy includes:-Abatacept (Orencia) -Adalimumab (HUMIRA) -Anakinra (Kineret) -Baricitinib (Olumiant) -Canakinumab (ILARIS) -Certolizumab pegol and lyophilized certolizumab pegol (CIMZIA) -Etanercept (Enbrel) -Golimumab (Simponi) -Infliximab (REMICADE) -Infliximab-dyyb (Inflectra) -Infliximab-abda (Renflexis) -Sarilumab (KEVZARA) -Secukinumab (Cosentyx) -Tocilizumab (ACTEMRA) -Tofacitinib (XELJANZ) -Ustekinumab (STELARA) The list of biologic DMARD therapies is subject to change as new therapies are approved by the FDA. This refinement removes the medication Denosumab (Prolia) from the list of biological DMARD therapies as it is not necessary to complete a TB test prior to use of this medication. Inclusion of this medication would be in contradiction of current medical guidelines and would subject patients to unnecessary testing, with potential of deleterious effects, while creating additional and unnecessary costs. It is for these reasons that we feel Denosumab (Prolia) must be removed as patient safety and making care affordable are healthcare priorities.</p>

Category	Description
	<p><b>Comment:</b> One commenter supported the addition of telehealth reporting for measure Q176.</p>
	<p><b>Response:</b> We thank the commenter for supporting the addition of telehealth reporting for this measure.</p>
	<p><b>Comment:</b> Several commenters opposed the removal of measure Q337: Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier as stated under Table C.6. The proposed update to measure Q176 would mean the denominator population would overlap with measure Q337. Instead of the measure being specific to rheumatoid arthritis (measure Q176) or psoriasis patients (measure Q337), it looks to assess all patients prescribed a first course biologic DMARD therapy. The commenters stated that the revision to measure Q176 does not sufficiently cover the patients that dermatologist treat or the medications that are used, as are currently reported under measure Q337.</p>
	<p><b>Response:</b> After consideration of public comments, we are no longer finalizing the removal of measure Q337. See Table C.6 of the final rule for further information. We encourage the commenters to reach out to the measure steward to work towards possible revisions in an effort to develop a unified measure reflecting a broader patient population and more inclusive medication therapy for possible future implementation.</p>
	<p>After consideration of public comments, we are finalizing the changes to measure Q176 as indicated for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>

**D.35 Rheumatoid Arthritis (RA): Glucocorticoid Management**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	180
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have been assessed for glucocorticoid use and, for those on prolonged doses of prednisone > 5 mg daily (or equivalent) with improvement or no change in disease activity, documentation of glucocorticoid management plan within 12 months.
<b>Substantive Change:</b>	<b>Updated denominator:</b> Added telehealth as eligible encounter.
<b>Steward:</b>	American College of Rheumatology
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.
<p><b>Comment:</b> One commenter supported the addition of telehealth reporting for measure Q180.</p> <p><b>Response:</b> We thank the commenter for supporting the addition of telehealth reporting for this measure.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q180 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

**D.36 Elder Maltreatment Screen and Follow-Up Plan**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	181
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Patient Safety
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 65 years and older with a documented elder maltreatment screen using an Elder Maltreatment Screening tool on the date of encounter AND a documented follow-up plan on the date of the positive screen.
<b>Substantive Change:</b>	<b>Updated denominator: For all collection types:</b> Added care management services.
<b>Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add coding applicable to chronic care management services as these capture encounters where screening may occur and is an appropriate patient population for this measure.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q181 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.37 Functional Outcome Assessment**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	182
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies on the date of the identified deficiencies.
<b>Substantive Change:</b>	<p><b>Updated denominator: For all collection types:</b> Added home health and domiciliary/rest home settings.</p> <p><b>The numerator note is revised to read: For all collection types:</b> The intent of this measure is for a functional outcome assessment tool to be utilized at a minimum of every 30 days but submission is only required at each qualifying encounter due to coding limitations. Therefore, for visits occurring within 30 days of a previously documented functional outcome assessment, the numerator quality-data code G8942 should be used for submission purposes.</p> <p><b>Updated numerator definition: For all collection types:</b> Revised: Current (Functional Outcome Assessment) – A patient having a documented functional outcome assessment utilizing a standardized tool and a care plan if indicated at a qualifying encounter within the previous 30 days.</p>
<b>Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add the home health and domiciliary/rest home settings as denominator eligible settings as functional assessments may occur at these visits and would lead to a more complete denominator eligible patient population. Additionally, we proposed to update the definition for ‘Current (Functional Outcome Assessment)’ and the numerator note to clarify the measure intent, which is to only report for qualifying encounters and not each visit.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q182 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.38 Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0565 / 0565e
<b>Quality#:</b>	191
<b>CMS eCQM ID:</b>	CMS133v9
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	eCQM Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of cataract surgeries for patients aged 18 years and older with a diagnosis of uncomplicated cataract and no significant ocular conditions impacting the visual outcome of surgery and had best-corrected visual acuity of 20/40 or better (distance or near) achieved in the operative eye within 90 days following the cataract surgery.
<b>Substantive Change:</b>	<b>Updated numerator: For the eCQM Specifications collection type:</b> Added data element: "Best Corrected Visual Acuity Exam Using Snellen Chart" (2.16.840.1.113883.3.526.3.1560)
<b>Steward:</b>	American Academy of Ophthalmology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Outcome
<b>Rationale:</b>	For the eCQM Specifications collection type, we proposed to add a data element for "Best Corrected Visual Acuity Exam Using Snellen Chart" allowing an alternative method to capture an exam commonly used in clinical practice that may not have been accurately captured prior. This added numerator compliant option is clinically in line with the measure intent and appropriate for inclusion.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q191 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.39 Radiology: Stenosis Measurement in Carotid Imaging Reports**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0507 / N/A
<b>Quality#:</b>	195
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of final reports for carotid imaging studies (neck magnetic resonance angiography [MRA], neck computed tomography angiography [CTA], neck duplex ultrasound, carotid angiogram) performed that include direct or indirect reference to measurements of distal internal carotid diameter as the denominator for stenosis measurement.
<b>Substantive Change:</b>	<p><b>The instructions are revised to read: For all collection types:</b> This measure is to be submitted each time a carotid imaging study is performed during the performance period for patients aged 18 years and older during the submission period. There is no diagnosis associated with this measure. Merit-based Incentive Payment System (MIPS) eligible clinicians who provide the professional component of diagnostic imaging studies of the carotids will submit this measure.</p> <p><b>The denominator is revised to read: For all collection types:</b> All final reports for carotid imaging studies (neck MR angiography [MRA], neck CT angiography [CTA], neck duplex ultrasound, carotid angiogram) performed on patients aged 18 years and older during the submission period.</p> <p><b>Updated denominator criteria: For all collection types:</b> Added: Patients aged <math>\geq</math> 18 years on date of encounter.</p>
<b>Steward:</b>	American College of Radiology
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the measure’s eligible patient population to include only patients aged 18 years and older. This will allow for closer monitoring regarding who is eligible and more appropriate for inclusion in the eligible patient population, which will decrease overall burden for the clinicians reporting this measure.
<p><b>Comment:</b> One commenter recognized the changes to measure Q195 without issue. A second commenter supported the changes to this measure as they better fit the intent of this measure and will lessen clinical burden to some extent.</p> <p><b>Response:</b> We thank the commenters for supporting the changes to this measure.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q195 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. **D.40 Functional Status Change for Patients with Knee Impairments**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	217
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	A patient-reported outcome measure of risk-adjusted change in functional status for patients aged 14 years+ with knee impairments. The change in functional status (FS) is assessed using the Knee FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
<b>Substantive Change:</b>	<p><b>The description is revised to read:</b> A patient-reported outcome measure of risk-adjusted change in functional status for patients aged 14 years+ with knee impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).</p> <p><b>Updated definition:</b> Revised: Encounter – A visit between the patient and the provider for the purpose of assessing and/or improving a functional deficit.</p> <p><b>Updated denominator exclusion:</b> Revised: Patient unable to complete the LEPF PROM at Initial Evaluation and/or Discharge due to blindness, illiteracy, severe mental incapacity or language incompatibility and an adequate proxy is not available.</p> <p><b>The numerator is revised to read:</b> Patients who were presented with the LEPF PROM at Initial Evaluation (Intake) and at or near Discharge (Status) for the purpose of calculating the patient’s Risk-Adjusted Functional Status Change Residual Score.</p> <p><b>Updated denominator exception:</b> Revised:</p> <ol style="list-style-type: none"> <li>Ongoing care not clinically indicated because the patient needed a home program only, referral to another provider or facility, or consultation only, as documented in the medical record.</li> <li>Ongoing care not medically possible because the patient was discharged early due to specific medical events, documented in the medical record, such as the patient became hospitalized or scheduled for surgery.</li> <li>Ongoing care not possible because the patient self-discharged early (e.g., financial or insurance reasons, transportation problems, or reason unknown).</li> </ol> <p><b>Updated numerator options:</b> Revised: <b>Performance Not Met:</b> Risk-Adjusted Functional Status Change Residual Score for the knee impairment not measured because the patient did not complete the LEPF PROM at Initial Evaluation and/or near Discharge, reason not given.</p>
<b>Steward:</b>	Focus on Therapeutic Outcomes, Inc.
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Patient Reported Outcome
<b>Rationale:</b>	We proposed to update the description, denominator exclusion, numerator statement, and numerator options to reflect the change in functional assessment tool, Knee FS PROM to the LEPF PROM. The assessment is being revised to address scientific updates and maintenance necessary for item-response theory based outcome measures. We proposed to update the denominator exception language to add clarity and better align with measure’s intent.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q217 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

**D.41 Functional Status Change for Patients with Hip Impairments**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	218
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with hip impairments. The change in functional status (FS) is assessed using the Hip FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
<b>Substantive Change:</b>	<p><b>The description is revised to read:</b> A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with hip impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).</p> <p><b>Updated definition:</b> Revised: Encounter – A visit between the patient and the provider for the purpose of assessing and/or improving a functional deficit.</p> <p><b>Updated denominator exclusion:</b> Revised: Patient unable to complete the LEPF PROM at Initial Evaluation and/or Discharge due to blindness, illiteracy, severe mental incapacity or language incompatibility and an adequate proxy is not available.</p> <p><b>The numerator is revised to read:</b> Patients who were presented with the LEPF PROM at Initial Evaluation (Intake) and at or near Discharge (Status) for the purpose of calculating the patient’s Risk-Adjusted Functional Status Change Residual Score.</p> <p><b>Updated denominator exception:</b> Revised:</p> <ol style="list-style-type: none"> <li>1. Ongoing care not clinically indicated because the patient needed a home program only, referral to another provider or facility, or consultation only, as documented in the medical record.</li> <li>2. Ongoing care not medically possible because the patient was discharged early due to specific medical events, documented in the medical record, such as the patient became hospitalized or scheduled for surgery.</li> <li>3. Ongoing care not possible because the patient self-discharged early (e.g., financial or insurance reasons, transportation problems, or reason unknown).</li> </ol> <p><b>Updated numerator options:</b> Revised: <b>Performance Not Met:</b> Risk-Adjusted Functional Status Change Residual Score for the hip impairment not measured because the patient did not complete the LEPF PROM at Initial Evaluation and/or near discharge, reason not given.</p>
<b>Steward:</b>	Focus on Therapeutic Outcomes, Inc.
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Patient Reported Outcome
<b>Rationale:</b>	We proposed to update the description, denominator exclusion, numerator statement, and numerator options to reflect the change in functional assessment tool, Hip FS PROM to the LEPF PROM. The assessment is being revised to address scientific updates and maintenance necessary for item-response theory based outcome measures. We proposed to update the denominator exception language to add clarity and better align with measure’s intent.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q218 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

**D.42 Functional Status Change for Patients with Lower Leg, Foot or Ankle Impairments**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	219
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with foot, ankle and lower leg impairments. The change in functional status (FS) is assessed using the Foot/Ankle FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
<b>Substantive Change:</b>	<p><b>The description is revised to read:</b> A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with foot, ankle and lower leg impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).</p> <p><b>Updated definition:</b> Revised: Encounter – A visit between the patient and the provider for the purpose of assessing and/or improving a functional deficit.</p> <p><b>Updated denominator criteria:</b> Revised ICD-10 coding for ‘With a lower leg, foot, or ankle impairment and/or diagnosis pertaining to a functional deficit affecting lower leg, foot, or ankle’.</p> <p><b>Updated denominator exclusion:</b> Revised: Patient unable to complete the LEPF PROM at Initial Evaluation and/or Discharge due to blindness, illiteracy, severe mental incapacity or language incompatibility and an adequate proxy is not available.</p> <p><b>The numerator is revised to read:</b> Patients who were presented with the LEPF PROM at Initial Evaluation (Intake) and at or near Discharge (Status) for the purpose of calculating the patient’s Risk-Adjusted Functional Status Change Residual Score.</p> <p><b>Updated denominator exception:</b> Revised:  <ol style="list-style-type: none"> <li>Ongoing care not clinically indicated because the patient needed a home program only, referral to another provider or facility, or consultation only, as documented in the medical record.</li> <li>Ongoing care not medically possible because the patient was discharged early due to specific medical events, documented in the medical record, such as the patient became hospitalized or scheduled for surgery.</li> <li>Ongoing care not possible because the patient self-discharged early (e.g., financial or insurance reasons, transportation problems, or reason unknown).</li> </ol> </p> <p><b>Updated numerator options:</b> Revised:  <b>Performance Not Met:</b> Risk-Adjusted Functional Status Change Residual Score for the lower leg, foot or ankle impairment not measured because the patient did not complete the LEPF PROM at Initial Evaluation and/or near discharge, reason not given.</p>
<b>Steward:</b>	Focus on Therapeutic Outcomes, Inc.
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Patient Reported Outcome
<b>Rationale:</b>	We proposed to update the description, denominator exclusion, numerator statement, and numerator options to reflect the change in functional assessment tool, Hip FS PROM to the LEPF PROM. The assessment is being revised to address scientific updates and maintenance necessary for item-response theory based outcome measures. We proposed to update the denominator exception language to add clarity and better align with measure’s intent. Additionally, we proposed to update the ICD-10 coding related to the denominator criteria statement, ‘With a lower leg, foot, or ankle impairment and/or diagnosis pertaining to a functional deficit affecting lower leg, foot, or ankle,’ to align with current coding.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q219 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

**D.43 Functional Status Change for Patients with Low Back Impairments**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	220
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with low back impairments. The change in functional status (FS) is assessed using the Low Back FS patient-reported outcome measure (PROM) (©2009-2019 Focus on Therapeutic Outcomes, Inc.). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
<b>Substantive Change:</b>	<p><b>The description is revised to read:</b> A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with low back impairments. The change in functional status (FS) is assessed using the FOTO Low Back FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).</p> <p><b>Updated definition:</b> Revised: Encounter – A visit between the patient and the provider for the purpose of assessing and/or improving a functional deficit.</p> <p><b>Updated denominator exception:</b> Revised:</p> <ol style="list-style-type: none"> <li>1. Ongoing care not clinically indicated because the patient needed a home program only, referral to another provider or facility, or consultation only, as documented in the medical record.</li> <li>2. Ongoing care not medically possible because the patient was discharged early due to specific medical events, documented in the medical record, such as the patient became hospitalized or scheduled for surgery.</li> <li>3. Ongoing care not possible because the patient self-discharged early (e.g., financial or insurance reasons, transportation problems, or reason unknown).</li> </ol>
<b>Steward:</b>	Focus on Therapeutic Outcomes, Inc.
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Patient Reported Outcome
<b>Rationale:</b>	We proposed to refine the description for easier readability. We proposed to update the denominator exception language to add clarity and better align and communicate the measure’s intent.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q220 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. **D.46 Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention**

Category	Description
NQF # / eCQM NQF #:	0028 / 0028e
Quality#:	226
CMS eCQM ID:	CMS138v9
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	<p>Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months <b>AND</b> who received tobacco cessation intervention if identified as a tobacco user</p> <p>a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months.</p> <p>b. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention.</p> <p>c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 24 months <b>AND</b> who received tobacco cessation intervention if identified as a tobacco user.</p>
Substantive Change:	<p><b>Modified collection type:</b> Medicare Part B Claims Measure Specifications, eCQM Specifications, and MIPS CQMs Specifications.</p> <p><b>The description is revised to read: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types:</b> Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months <b>AND</b> who received tobacco cessation intervention if identified as a tobacco user.</p> <p><b>The description is revised to read: For the eCQM Specifications collection type:</b> Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months <b>AND</b> who received tobacco cessation intervention if identified as a tobacco user.</p> <p>Three rates are reported:</p> <p>a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months</p> <p>b. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention</p> <p>c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months <b>AND</b> who received tobacco cessation intervention if identified as a tobacco user</p> <p><b>Updated instructions: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types:</b> Revised the language to reflect a 12-month timeframe for the look back period and assessment of clinical quality action.</p> <p><b>Updated guidance: For the eCQM Specifications collection type:</b> Revised: To satisfy the intent of this measure, a patient must have at least one tobacco use screening during the 12-month period. If a patient has multiple tobacco use screenings during the 12-month period, only the most recent screening, which has a documented status of tobacco user or tobacco non-user, will be used to satisfy the measure requirements.</p> <p>Added: To promote a team-based approach to patient care, the tobacco cessation intervention can be performed by another healthcare provider; therefore, the tobacco use screening and tobacco cessation intervention do not need to be performed by the same provider or clinician.</p> <p><b>Updated denominator: For all collection types:</b> Added Physical Therapy MIPS eligible clinician and telehealth as eligible encounters for all submission criteria.</p> <p><b>Updated denominator exception: For eCQM Specifications collection type:</b> Removed coding from the ‘Medical Reason’ value set for concepts not indicating medical contraindication.</p> <p><b>Updated logic: For the eCQM Specifications collection type:</b> Revised to reflect a 12-month timeframe for the look back period and assessment of clinical quality action.</p> <p><b>Updated numerator: For the eCQM Specifications collection type:</b> Revised to reflect a 12-month timeframe for the look back period and assessment of clinical quality action. Additionally, revised the logic to unlink the intervention from having to occur after the tobacco user status.</p> <p><b>Updated numerator: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types:</b> Revised to reflect a 12-month timeframe for the look back period and assessment of clinical quality action.</p> <p><b>Updated numerator note: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types:</b> Revised to reflect a 12-month timeframe for the look back period and assessment of clinical quality action.</p>

Category	Description
Measure Type:	Process
Rationale:	<p>We proposed to revise the measure to shorten the look back period to 12 months and require that tobacco screening and cessation, if patient screened positive, occur every 12 months. The revision is based upon stakeholder feedback, input from the eCQM clinical review process, and the measure steward’s technical expert panel (TEP). We agreed that it is important to do this annually as tobacco use is an important population health concern and smoking is the leading cause of preventable death (<a href="https://www.cdc.gov/tobacco/data_statistics/fact_sheets/index.htm">https://www.cdc.gov/tobacco/data_statistics/fact_sheets/index.htm</a>). The language throughout the measure specification is being revised to reflect this update. Additionally, we proposed to add physical therapy MIPS eligible clinicians to the denominator eligible encounters as this is applicable to their scope of practice.</p> <p>For the eCQM Specifications collection type we proposed to unlink the intervention from having to occur after the tobacco status within the measure logic. This revision is better aligned with the clinical reality that for patients actively trying to quit a plan will be in place and further tobacco cessation intervention is redundant, as well as lessening the burden of clinicians, especially for those patients who are not planning on quitting. The measure steward updated the guidance statement based upon technical expert feedback to reflect that team-based care would be appropriate for this measure. We agreed that this guidance update is clinically appropriate and aligns better with clinical care workflows. Additionally, we proposed to revise the ‘Medical Reason’ value set based upon expert and stakeholder feedback to remove codes based upon intent of concepts which do not indicate a medical contraindication, but rather a provider decision to discontinue or adjust a course of treatment. These codes do not meet the intent of the denominator exception.</p> <p>We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p> <p>We proposed to remove the CMS Web Interface Measure Specifications collection type. This collection type was proposed to be sunset for the purposes of MIPS starting with the 2021 performance year. We have determined it is not fiscally viable, feasible, or sustainable for MIPS to continue this collection type/submission type due to an 80 percent reduction and a continued decrease in interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures. For further rationale, please see section IV.A.3.c.(1)(c) of this final rule.</p> <p>In the event the proposed substantive change(s) were finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes.</p>
<p><b>Comment:</b> One commenter supported the update of the denominator to add physical therapy MIPS-eligible clinicians and telehealth as eligible encounters for measure Q226. Multiple commenters supported the addition of telehealth reporting for this measure.</p> <p><b>Response:</b> We thank the commenters for supporting adding physical therapists to this measure and for supporting the adding telehealth as eligible encounters.</p> <p><b>Comment:</b> One commenter greatly appreciated the numerator change to tobacco cessation for eCQMs, specifically the language “Additionally, revised the logic to unlink the intervention from having to occur after the tobacco user status.”</p> <p><b>Response:</b> We thank the commenter for supporting this change to the numerator language for eCQMs.</p> <p><b>Comment:</b> One commenter agreed, and one commenter disagreed with the proposal to shorten the lookback period for evidence of tobacco use screening from 24 to 12 months. The vast majority of smokers pick up the habit before age 18. Consequently, while tobacco screening and intervention should – of necessity – be more frequent in the years of patient adolescence and young adulthood, there is little evidence to indicate more frequent screening is warranted in older adults. The commenter preferred that the lookback period stay at 24 months. An alternative – though admittedly a burdensome one – is for the lookback period to vary by age to account for clinical realities.</p> <p><b>Response:</b> We thank the commenters for their comments. The U.S. Preventive Services Task Force indicated that “Tobacco use is the leading preventable cause of disease, disability, and death in the United States. Cigarette smoking results in more than 480,000 premature deaths each year and accounts for approximately 1 in every 5 deaths”. Due to the harmful effect tobacco use can have on patients’ health, we believe that clinicians should engage with their patients to screen for tobacco use and, if positive, provide tobacco cessation counseling annually.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q226 as indicated for the 2021 MIPS performance period/2023 MIPS payment year and future years with the exception of the CMS Web Interface Specifications collection type. At § 414.1305, we proposed to modify the definition of the terms collection type and submission type by removing the CMS Web Interface Specifications as an available option starting with the 2023 payment year (85 FR 50290); however, the CMS Web Interface Measure Specifications collection type will be an available option for an extension of one additional year (2021 MIPS performance period/2023 MIPS payment year) and will be removed as a collection and submission type starting with the 2022 MIPS performance period/2024 MIPS payment year. None of the substantive changes above will be applied to the CMS Web Interface Measure Specifications for the 2021 MIPS performance period. The CMS Web Interface Specifications for the 2021 MIPS performance period will reflect the 2020 CMS Web Interface Specifications. In addition, we are not finalizing the proposed additional telehealth encounter eligibility substantive change for the eCQM Specifications collection type because this is already specified in the current measure.</p>

**D.47 Controlling High Blood Pressure**

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	236
CMS eCQM ID:	CMS165v9
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 18-85 years of age who had a diagnosis of hypertension overlapping the measurement period and whose most recent blood pressure was adequately controlled (<140/90mmHg) during the measurement period.
Substantive Change:	<p><b>Modified collection type:</b> Medicare Part B Claims Measure Specifications, eCQM Specification and MIPS CQMs Specifications</p> <p><b>Updated denominator note: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types:</b> Added: The diagnosis of essential hypertension must be present sometime between 1 year prior to the measurement period and before the end of the measurement period (January 1, 2020 through December 31, 2021).</p> <p><b>Updated denominator exclusion: For the eCQM Specification collection type:</b> Revised: Exclude patients 66 and older who are living long term in an institution for more than 90 consecutive days during the measurement period.</p> <p><b>Updated denominator exclusion logic: For the eCQM Specifications collection type:</b> Updated encounters so they are "on or" before the end of the measurement period. Updated the LTI exclusion to be 90 consecutive days. Changed the name of the 81 exclusion definition to "FrailtyLTI.Advanced Illness and Frailty Exclusion Not Including Over Age 80".</p> <p><b>Updated denominator exclusion: For the MIPS CQMs Specifications and Medicare Part B Claims Measure Specification collection type:</b> Added coding to identify patients with advanced illness and frailty</p> <p><b>Updated logic: For the eCQM Specifications collection type:</b> Change to the Essential Hypertension Diagnosis definition logic used to define the initial patient population requires hypertension overlap the measurement period indicating hypertension must be present prior to and during the measurement period.</p> <p><b>Updated denominator exclusion: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types:</b> Revised:</p> <ol style="list-style-type: none"> <li>1. Patients age 66 or older in Institutional Special Needs Plans (SNP) or residing in long-term care with POS code, 32, 33, 34, 54, or 56 for more than 90 consecutive days during the measurement period.</li> <li>2. Patients 66-80 years of age with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period</li> <li>3. Patients 66-80 years of age with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period</li> </ol> <p>Added:</p> <ol style="list-style-type: none"> <li>1. Patients 81 years of age and older with at least one claim/encounter for frailty during the measurement period.</li> </ol> <p><b>Updated instructions note/numerator note: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types:</b> Added:</p> <ul style="list-style-type: none"> <li>• Reported by or taken by the patient (with the exception of BP values taken by a remote monitoring device, which are then reported to the provider).</li> </ul>
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	<p>We proposed that the denominator exclusion language and logic be updated in all collection types to clarify that, for the measure, long-term care will be defined as patients staying 90 consecutive days at the long-term care facility versus any 90 days within the performance period. For the eCQM Specifications collection type we proposed to update the logic to allow for new hypertension diagnoses within the first 6 months of the performance period to better align with the intent of the measure.</p> <p>We proposed to add a denominator note to clarify the patient population eligible for the measure and to reflect the revision in timing for the essential hypertension diagnosis; ensuring patients that should be assessed are included within the denominator eligible patient population. Additionally, for the MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection types, we proposed adding applicable coding to better define the advanced illness and frailty patient population for the purposes of this measure. We also proposed to update the instructions note and the numerator note to add clarity regarding the use of remote monitoring devices for the purposes of this measure in response to stakeholder feedback.</p> <p>We proposed to remove the CMS Web Interface Measure Specifications collection type. This collection type was proposed to be sunset for the purposes of MIPS starting with the 2021 performance year. We have determined it is not fiscally viable, feasible, or sustainable for MIPS to continue this collection type/submission type due to an 80 percent reduction and a continued decrease in</p>

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

Category	Description
	interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures. For further rationale, please see section IV.A.3.c.(1)(c) of this final rule.
	<p><b>Comment:</b> One commenter stated that although telehealth is available for this measure, it is restricted to using only remote devices (via Bluetooth technology). The concern is that this may be restrictive to some patients who might benefit from telehealth (virtual visits) but do not have and/or cannot afford a new device and/or technology. The commenter recommended that the measure follow HEDIS specifications that allows visual confirmation on the blood pressure measuring device by the provider during the virtual visit and then to record the blood pressure in the EHR.</p>
	<p><b>Response:</b> We thank the commenter for their comment. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p>
	<p>After consideration of public comments, we are finalizing the changes to measure Q236 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years with the exception of the CMS Web Interface Specifications collection type. At § 414.1305, we proposed to modify the definition of the terms collection type and submission type by removing the CMS Web Interface Specifications as an available option starting with the 2023 payment year (85 FR 50290); however, the CMS Web Interface Measure Specifications collection type will be an available option for an extension of one additional year (2021 MIPS performance period/2023 MIPS payment year) and will be removed as a collection and submission type starting with the 2022 MIPS performance period/2024 MIPS payment year. None of the substantive changes above will be applied to the CMS Web Interface Measure Specifications for the 2021 MIPS performance period. The CMS Web Interface Specifications for the 2021 MIPS performance period will reflect the 2020 CMS Web Interface Specifications.</p>
	<p>We have identified a technical error in the language for the update to the eCQM Specifications collection type for the denominator logic. For the eCQM Specifications collection type, we inadvertently indicated that the timeframe for the hypertension diagnosis must be present prior to “and” during the measurement period. To resolve this technical error, the “and” was replaced with “or”. We have updated the language for the logic from the proposed change for the eCQM Specifications collection type as follows:</p>
	<p><b>Technical error:</b> Change to the Essential Hypertension Diagnosis definition logic used to define the initial patient population requires hypertension overlap the measurement period indicating hypertension must be present prior to and during the measurement period.</p>
	<p><b>To resolve technical error:</b> Change to the Essential Hypertension Diagnosis definition logic used to define the initial patient population requires hypertension overlap the measurement period indicating hypertension must be present prior to OR during the measurement period.</p>
	<p>This reflects the change to the denominator logic proposed for the Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications collection types. The 2021 performance period eCQM measure specifications have been published since May 7, 2020 on the CMS Electronic Clinical Quality Improvement (eCQI) Resource Center website at <a href="https://ecqi.healthit.gov/ecqm/ep/2021/cms165v9">https://ecqi.healthit.gov/ecqm/ep/2021/cms165v9</a> and we have not received feedback or public comments regarding this change in denominator logic.</p>
	<p>Further refinements were made to the measure specifications in order to align with the proposed update to the denominator note for the Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications collection types. We are finalizing a modification of the Measure Description for the Medicare Part B Claims Measure Specifications, eCQM Specification, and MIPS CQMs Specifications collection types as follows:</p>
	<p><b>Current:</b> Percentage of patients 18-85 years of age who had a diagnosis of hypertension overlapping the measurement period and whose most recent blood pressure was adequately controlled (&lt;140/90mmHg) during the measurement period.</p>
	<p><b>Revised to read:</b> Percentage of patients 18-85 years of age who had a diagnosis of hypertension overlapping the measurement period or the year prior to the measurement period, and whose most recent blood pressure was adequately controlled (&lt;140/90mmHg) during the measurement period.</p>
	<p>Additionally, we are finalizing a modification to the Denominator Statement for the Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications collection types, and the Initial Patient Population for the eCQM Specifications collection type. The following finalized modification pertains to the Denominator Statement for the Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications collection types.</p>
	<p><b>Current:</b> Patients 18-85 years of age who had a visit and a diagnosis of hypertension overlapping the measurement period.</p>
	<p><b>Revised to read:</b> Patients 18-85 years of age who had a visit and diagnosis of essential hypertension overlapping the measurement period or the year prior to the measurement period.</p>
	<p>The following finalized modification pertains to the Initial Patient Population for the eCQM Specifications collection type.</p>
	<p><b>Current:</b> Patients 18-85 years of age who had a visit and diagnosis of essential hypertension overlapping the measurement period.</p>
	<p><b>Revised to read:</b> Patients 18-85 years of age who had a visit and diagnosis of essential hypertension overlapping the measurement period or the year prior to the measurement period.</p>
	<p>We are finalizing the denominator note for the Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications collection types as proposed. For the reasons noted above, we are finalizing a modification of the logic for the eCQM Specifications collection type: Change to the Essential Hypertension Diagnosis definition logic used to define the initial patient population requires hypertension overlap the measurement period indicating hypertension must be present prior to or during the measurement period.</p>
	<p>The additional changes to the description, denominator statement, and initial patient population do not affect the intent of the proposed substantive change, but adds alignment and clarity between the collection types in order to ensure proper implementation within and across collection types.</p>

Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.48 Use of High-Risk Medications in the Elderly**

Category	Description
<b>NQF # / eCQM NQF #:</b>	0022 / N/A
<b>Quality#:</b>	238
<b>CMS eCQM ID:</b>	CMS156v9
<b>National Quality Strategy Domain:</b>	Patient Safety
<b>Current Collection Type:</b>	eCQM Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients 65 years of age and older who were ordered high-risk medications. Two rates are submitted. 1) Percentage of patients who were ordered at least one high-risk medication. 2) Percentage of patients who were ordered at least two of the same high-risk medications.
<b>Substantive Change:</b>	<p><b>The title is revised from 'Use of High-Risk Medications in the Elderly' to:</b> Use of High-Risk Medications in Older Adults.</p> <p><b>The description is revised to read:</b> Percentage of patients 65 years of age and older who were ordered at least two of the same high-risk medications.</p> <p><b>Updated measure analytics: For all collection types:</b> One performance rate.</p> <p><b>The guidance is revised to read: For the eCQM Specifications collection type:</b> The intent of the measure is to assess if the patient has been prescribed at least two of the same high-risk medications on different days. The intent of the measure is to assess if the reporting provider ordered the high-risk medication(s). If the patient had a high-risk medication previously prescribed by another provider, they would not be counted towards the numerator unless the reporting provider also ordered a high-risk medication for them. This eCQM is a patient-based measure. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (<a href="https://ecqi.healthit.gov/qdm">https://ecqi.healthit.gov/qdm</a>) for more information on the QDM.</p> <p><b>Updated instructions: For the MIPS CQMs Specifications collection type:</b> Removed language related to the submission of two performance rates and two submission criteria.</p> <p><b>Updated denominator: For all collection types:</b> Removed submission criteria one.</p> <p><b>For MIPS CQMs Specifications collection type:</b> Added ophthalmology, skilled nursing facility, and domiciliary/rest home settings and preventive care services.</p> <p><b>The numerator is revised to read: For all collection type:</b> Patients with at least two orders for the same high-risk medication on different days during the measurement period.</p> <p><b>Updated numerator: For the MIPS CQMs Specifications collection type:</b> Removed submission criteria one numerator. Revised High-Risk Medications at any dose or duration Table 1:</p> <p>Added: Pylramine, Orphenadrine, Chlordiazepoxide-clidinium, Methscopolamine, Glimepiride</p> <p>Removed: Clidinium Chloradiazepoxide, Ticlopidine, Pentazocine</p> <p><b>For the eCQM Specifications collection type:</b> Added medication value sets: Scopolamine, Secobarbital, Propantheline, Doxylamine, Ergoloid Mesylates, Butalbital, Amobarbital, Pentobarbital</p>
<b>Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to remove submission criteria one from this measure and continue to assess the percentage of patients 65 years of age and older who were ordered at least two of the same high-risk medications. This change will lessen clinician burden while still assessing an important aspect of patient safety. This patient population is a better assessment of the riskier, longer-term use and allows MIPS eligible clinicians/groups to address potentially inappropriate medication dispensing to improve quality outcomes. The eCQM Specifications collection type added medication value sets to the numerator to align with the Beers Criteria for Potentially Inappropriate Medication list, as well as to reflect expert review and stakeholder feedback. These updates ensure all high-risk medications are being assessed for numerator compliance. The MIPS CQMs Specifications collection type was revised to align medications across collection types.</p> <p>In the event the proposed substantive change(s) were finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes.</p>
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q238 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. **D.49 Cardiac Rehabilitation Patient Referral from an Outpatient Setting**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0643 / N/A
<b>Quality#:</b>	243
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients evaluated in an outpatient setting who within the previous 12 months have experienced an acute myocardial infarction (MI), coronary artery bypass graft (CABG) surgery, a percutaneous coronary intervention (PCI), cardiac valve surgery, or cardiac transplantation, or who have chronic stable angina (CSA) and have not already participated in an early outpatient cardiac rehabilitation/secondary prevention (CR) program for the qualifying event/diagnosis who were referred to a CR program.
<b>Substantive Change:</b>	<b>Updated denominator:</b> Added Skilled Nursing Facility, Domiciliary/Rest Home, Home Visit, and Outpatient Consultation settings. Added telehealth as eligible encounter.
<b>Steward:</b>	American Heart Association
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add settings, Skilled Nursing Facility, Domiciliary/Rest Home, Home Visit, and Outpatient Consultation, as denominator eligible as they are clinically relevant settings that can ensure that patients receive or continue outpatient cardiac rehabilitation to support positive outcomes in their clinical care.  We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.
<b>Comment:</b> Several commenters supported the addition of telehealth reporting for measure Q243.	
<b>Response:</b> We thank the commenters for supporting the addition of telehealth reporting for this measure.  After consideration of public comments, we are finalizing the changes to measure Q243 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

**D.50 Biopsy Follow-Up**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	265
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of new patients whose biopsy results have been reviewed and communicated to the primary care/referring physician and patient.
<b>Substantive Change:</b>	<b>Updated denominator:</b> Added telehealth as eligible encounter.
<b>Steward:</b>	American Academy of Dermatology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.
<b>Comment:</b> One commenter supported the addition of telehealth reporting for measure Q265.	
<b>Response:</b> We thank the commenter for supporting the addition of telehealth reporting for this measure.	
After consideration of public comments, we are finalizing the changes to measure Q265 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. **D.51 Epilepsy: Counseling for Women of Childbearing Potential with Epilepsy**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	268
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of all patients of childbearing potential (12 years and older) diagnosed with epilepsy who were counseled at least once a year about how epilepsy and its treatment may affect contraception and pregnancy.
<b>Substantive Change:</b>	<p><b>Modified collection type:</b> MIPS CQMs Specifications</p> <p><b>The denominator is revised to read:</b> All females, including all individuals of childbearing potential (12 years and older) with a diagnosis of epilepsy.</p> <p><b>Updated denominator:</b> Added telehealth as eligible encounter.</p>
<b>Steward:</b>	American Academy of Neurology
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to remove the Medicare Part B Claims Measure Specifications collection type. The limited patient population and adoption of the quality measure for this collection type does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement.</p> <p>We proposed the denominator statement be revised to be more inclusive of the eligible patient population.</p> <p>We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>
<p><b>Comment:</b> One commenter requested the removal of Medicare Part B Claims Measure Specifications for measure Q268 through the measure review process. The commenter noted that these changes were not reflected in the 2021 PFS proposed rule and the measure specifications should be removed, as the measure steward is no longer maintaining these specifications.</p> <p><b>Response:</b> We did propose to modify the collection type to only include the MIPS CQMs Specifications collection type. We thank the commenter for their support in the removal of the Medicare Part B Claims Measure Specifications collection type.</p> <p><b>Comment:</b> One commenter supported the addition of telehealth reporting for measure Q268.</p> <p><b>Response:</b> We thank the commenter for supporting the addition of telehealth reporting for this measure.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q268 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>

**D.52 Sleep Apnea: Severity Assessment at Initial Diagnosis**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	277
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of obstructive sleep apnea who had an apnea hypopnea index (AHI) or a respiratory disturbance index (RDI) measured at the time of initial diagnosis.
<b>Substantive Change:</b>	<b>Updated denominator:</b> Added telehealth as eligible encounter.
<b>Steward:</b>	American Academy of Sleep Medicine
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.
<b>Comment:</b> One commenter supported the addition of telehealth reporting for measure Q277.	
<b>Response:</b> We thank the commenter for supporting the addition of telehealth reporting for this measure.	
After consideration of public comments, we are finalizing the changes to measure Q277 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.

Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.53 Sleep Apnea: Assessment of Adherence to Positive Airway Pressure Therapy**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	279
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of visits for patients aged 18 years and older with a diagnosis of obstructive sleep apnea who were prescribed positive airway pressure therapy who had documentation that adherence to positive airway pressure therapy was objectively measured.
<b>Substantive Change:</b>	<b>Updated denominator:</b> Added telehealth as eligible encounter.
<b>Steward:</b>	American Academy of Sleep Medicine
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.
<b>Comment:</b> One commenter supported the addition of telehealth reporting for measure Q279.	
<b>Response:</b> We thank the commenter for supporting the addition of telehealth reporting for this measure.	
After consideration of public comments, we are finalizing the changes to measure Q279 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

**D.54 Dementia: Cognitive Assessment**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / 2872e
<b>Quality#:</b>	281
<b>CMS eCQM ID:</b>	CMS149v9
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	eCQM Specifications
<b>Current Measure Description:</b>	Percentage of patients, regardless of age, with a diagnosis of dementia for whom an assessment of cognition is performed and the results reviewed at least once within a 12-month period.
<b>Substantive Change:</b>	<p><b>The guidance is revised to read:</b>                      Use of a standardized tool or instrument to assess cognition other than those listed will meet numerator performance. Standardized tools can be mapped to the concept "Intervention, Performed": "Cognitive Assessment" included in the numerator logic below.                      The requirement of two or more visits is to establish that the eligible professional or eligible clinician has an existing relationship with the patient.                      In recognition of the growing use of integrated and team-based care, the diagnosis of dementia and the assessment of cognitive function need not be performed by the same provider or clinician.                      The DSM-5 has replaced the term dementia with major neurocognitive disorder and mild neurocognitive disorder. For the purposes of this measure, the terms are equivalent.                      This eCQM is a patient-based measure.                      This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (<a href="https://ecqi.healthit.gov/qdm">https://ecqi.healthit.gov/qdm</a>) for more information on the QDM.</p>
<b>Steward:</b>	American Academy of Neurology
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	The measure steward's technical expert panel suggested adding language within the guidance statement to reflect that team-based care is appropriate for this measure. We agreed that this is an important concept and applicable to this measure, adding the language helps to clarify the measure intent.
<p><b>Comment:</b> One commenter supported the changes for measure Q281 related to dementia and associated screening assessments.</p> <p><b>Response:</b> We thank the commenter for supporting the changes to this measure.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q281 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.55 Dementia: Functional Status Assessment**

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	282
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients with dementia for whom an assessment of functional status was performed at least once in the last 12 months.
Substantive Change:	<p><b>The definition is revised to read:</b> Assessment of functional status - Functional status is assessed by use of a validated tool, direct assessment of the patient, or by querying a knowledgeable informant. A direct assessment of functional status includes an evaluation of the patient's ability to perform instrumental activities of daily living (IADL) and basic activities of daily living (ADL).</p> <p><b>Updated denominator:</b> Added telehealth as eligible encounter.</p> <p><b>The numerator instructions are revised to read:</b> To meet this measure, providers must assess BOTH IADL and ADL performance.</p> <ol style="list-style-type: none"> <li>IADL Assessment (users must meet one of the two below bullets to meet IADL assessment component) <ul style="list-style-type: none"> <li>To meet the measure's IADL component using a validated tool, providers must use one of the following tools: <ul style="list-style-type: none"> <li>Lawton Instrumental Activities of Daily Living Scale</li> <li>Bristol Activities of Daily Living Scale</li> <li>Katz Index of Independence in Activities of Daily Living</li> <li>Functional Activities Questionnaire</li> <li>Functional Independence Measure Instrument</li> </ul> </li> <li>To meet the measure's IADL component using a direct assessment, providers must document 3 out of the following 5 domains. <ul style="list-style-type: none"> <li>Cleaning or hobbies</li> <li>Money management,</li> <li>Medication management,</li> <li>Transportation, and</li> <li>Cooking or communication</li> </ul> </li> </ul> </li> <li>ADL Assessment (users must meet one of the two below bullets to meet ADL assessment component) <ul style="list-style-type: none"> <li>To meet the measure's ADL component using a validated tool, providers must use either: <ul style="list-style-type: none"> <li>Barthel ADL Index</li> <li>Bristol Activities of Daily Living Scale</li> </ul> </li> <li>To meet the measure's ADL component using a direct assessment, providers must document 3 out of the following 7 domains. <ul style="list-style-type: none"> <li>Grooming,</li> <li>Bathing,</li> <li>Dressing,</li> <li>Eating,</li> <li>Toileting,</li> <li>Gait, and</li> <li>Transferring</li> </ul> </li> </ul> </li> </ol> <p><b>The numerator notes is revised to read:</b> The 12-month look back period is defined as 12 months from the date of the denominator eligible encounter. Denominator Exception(s) are determined on the date of the denominator eligible encounter. Documentation of advanced stage dementia and caregiver knowledge is limited would meet the measure exception criteria.</p> <p><b>The denominator exception is revised to read:</b> Documentation of advanced stage dementia and caregiver knowledge is limited.</p>
Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale:	<p>We proposed the measure definition and numerator instructions to provide clarity regarding expectations for numerator compliance. This updated language should address any stakeholder confusion for implementing the measure. The numerator note was updated to align with revised denominator exception. We proposed to update the denominator exception to reduce ambiguity regarding patient scenarios where an exception is clinically appropriate.</p> <p>We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>
Comment:	One commenter supported the changes for measure Q282 related to dementia and associated screening assessments. Another commenter supported adding telehealth reporting to this measure. Another commenter support adopting language in its guidance recognizing the growing use of integrated and team-based care in the diagnosis of dementia and the assessment of cognitive impairment and concur with CMS's continued recognition that functional status includes an evaluation of a patient's ability to perform instrumental activities of daily living (IADLs) and activities of daily living (ADLs). The commenter also applauded CMS's ongoing monitoring and measurement of the percentage of patients with dementia for whom there is documented screening because it reflects CMS's recognition of the critical importance of regular screening, assessment, and management of patients with dementia for other behavioral and psychiatric symptoms.
Response:	We thank the commenters for supporting the changes to this measure.

Category	Description
	After consideration of public comments, we are finalizing the changes to measure Q282 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.56 Dementia Associated Behavioral and Psychiatric Symptoms Screening and Management**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	283
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients with dementia for whom there was a documented screening for behavioral and psychiatric symptoms, including depression, and for whom, if symptoms screening was positive, there was also documentation of recommendations for management in the last 12 months.
<b>Substantive Change:</b>	<p><b>Updated denominator:</b> Added telehealth as eligible encounter.</p> <p><b>The definition is revised to read:</b> Behavioral and Psychiatric Symptoms Screening - Screening is defined as using a validated instrument or directly examining the patient or knowledgeable informant to determine the presence or absence of symptoms from three domains: Activity disturbances, mood disturbances (including depression), and thought and perceptual disturbances. The following validated instruments can be used to meet the measure:</p> <ul style="list-style-type: none"> <li>• Dementia Signs and Symptoms (DSS) Scale</li> <li>• Neuropsychiatric Inventory (NPI)</li> <li>• Minimum Data Set (MDS) (suggested for nursing home only).</li> </ul> <p><b>Updated numerator instructions:</b> Added: Thought and perceptual disturbances under ‘Thought and perceptual disturbances’. Revised: Examples of reliable and valid instruments that can be used to assess behavioral and psychiatric symptoms are: Dementia Signs and Symptoms (DSS) Scale or Neuropsychiatric Inventory (NPI). For patients residing in nursing homes, it may be the Minimum Data Set (MDS). Other reliable and valid instruments may be used to assess individual measure components for activity disturbances, mood disturbances including depression, and thought and perceptual disturbances.</p>
<b>Steward:</b>	American Academy of Neurology
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to update the definition to remove ‘positive’, as this was not appropriate or aligned with the definition for the purposes of this measure. Additionally, information regarding approved screening instruments was moved to this section as it is more appropriately in this section of the measure specification. We proposed to update the numerator instructions to add ‘thought and perceptual disturbance’ and provide greater clarity regarding the requirements of numerator compliance for this measure.</p> <p>We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>
<p><b>Comment:</b> One commenter supported the changes for measure Q283 related to dementia and associated screening assessments. Another commenter supported adding telehealth reporting to this measure.</p> <p><b>Response:</b> We thank the commenter for supporting the changes to this measure.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q283 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.57 Dementia: Safety Concern Screening and Follow-Up for Patients with Dementia**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	286
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Patient Safety
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients with dementia or their caregiver(s) for whom there was a documented safety concerns screening in two domains of risk: 1) dangerousness to self or others and 2) environmental risks; and if safety concerns screening was positive in the last 12 months, there was documentation of mitigation recommendations, including but not limited to referral to other resources.
<b>Substantive Change:</b>	<b>The denominator exception is revised to read:</b> Documentation patient unable to communicate and informant not available. <b>Updated denominator:</b> Added telehealth as eligible encounter.
<b>Steward:</b>	American Academy of Neurology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to revise the denominator exception to better align with real-world clinical scenarios where safety screening could not be completed and therefore no mitigation recommendations could be provided. This change aids clinicians reporting the measure with an exception to excuse them from performance in a clinical situation they are unable to control.  We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.
<b>Comment:</b> One commenter supported the changes for measure Q286 related to dementia and associated screening assessments. Another commenter supported adding telehealth reporting to this measure.	
<b>Response:</b> We thank the commenter for supporting the changes to this measure.	
After consideration of public comments, we are finalizing the changes to measure Q286 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.58 Dementia: Education and Support of Caregivers for Patients with Dementia**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	288
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients with dementia whose caregiver(s) were provided with education on dementia disease management and health behavior changes AND were referred to additional resources for support in the last 12 months.
<b>Substantive Change:</b>	<p><b>Updated denominator:</b> Added telehealth as eligible encounter.</p> <p><b>Updated denominator exceptions:</b>                  Revised:                  Patient does not have a caregiver.                  Added:                  1. Documentation caregiver is trained and certified in dementia care.                  2. Patient/caregiver dyad has been referred to appropriate resources and connection to those resources is confirmed.</p>
<b>Steward:</b>	American Academy of Neurology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to revise the denominator exception to reduce ambiguity regarding patient scenarios where an exception is clinically appropriate. Additionally, we proposed to add two denominator exceptions to further clarify clinical scenarios where it may not be appropriate to attribute the quality action to that MIPS eligible clinician.</p> <p>We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>
<p><b>Comment:</b> One commenter supported the changes for measure Q288 related to dementia and associated screening assessments. Another commenter supported adding telehealth reporting to this measure.</p> <p><b>Response:</b> We thank the commenter for supporting the changes to this measure.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q288 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.59 Parkinson’s Disease: Psychiatric Symptoms Assessment for Patients with Parkinson’s Disease**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	290
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of all patients with a diagnosis of Parkinson’s Disease [PD] who were assessed for psychiatric symptoms in the past 12 months.
<b>Substantive Change:</b>	<b>The description is revised to read:</b> Percentage of all patients with a diagnosis of Parkinson’s Disease [PD] who were assessed for psychiatric symptoms once in the past 12 months.  <b>Updated denominator:</b> Added telehealth as eligible encounter.
<b>Steward:</b>	American Academy of Neurology
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the measure description to include the word ‘once’ to provide added clarity regarding measure intent.  We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.
<b>Comment:</b> One commenter supported the addition of telehealth reporting for measure Q290.	
<b>Response:</b> We thank the commenter for supporting the addition of telehealth reporting for this measure.	
After consideration of public comments, we are finalizing the changes to measure Q290 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.60 Parkinson’s Disease: Cognitive Impairment or Dysfunction Assessment for Patients with Parkinson's Disease**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	291
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of all patients with a diagnosis of Parkinson’s Disease [PD] who were assessed for cognitive impairment or dysfunction in the past 12 months.
<b>Substantive Change:</b>	<b>The description is revised to read:</b> Percentage of all patients with a diagnosis of Parkinson’s Disease [PD] who were assessed for cognitive impairment or dysfunction once in the past 12 months.  <b>Updated denominator:</b> Added telehealth as eligible encounter.
<b>Steward:</b>	American Academy of Neurology
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the measure description to include the word ‘once’ to provide added clarity regarding measure intent.  We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.
<b>Comment:</b> One commenter supported the addition of telehealth reporting for measure Q291.	
<b>Response:</b> We thank the commenter for supporting the addition of telehealth reporting for this measure.	
After consideration of public comments, we are finalizing the changes to measure Q291 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.61 Parkinson’s Disease: Rehabilitative Therapy Options**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	293
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of all patients with a diagnosis of Parkinson’s Disease (or caregiver(s), as appropriate) who had rehabilitative therapy options (i.e., physical, occupational, and speech therapy) discussed in the past 12 months.
<b>Substantive Change:</b>	<p><b>The description is revised to read:</b> Percentage of all patients with a diagnosis of Parkinson’s Disease (or caregiver(s), as appropriate) who had rehabilitative therapy options (i.e., physical, occupational, and speech therapy) discussed once in the past 12 months.</p> <p><b>Updated denominator exception:</b> Removed: Documentation of medical reason(s) for not discussing rehabilitative therapy options with patient (or caregiver).</p> <p><b>Updated denominator:</b> Added telehealth as eligible encounter.</p>
<b>Steward:</b>	American Academy of Neurology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to update the measure description to include the word ‘once’ to provide added clarity regarding measure intent. Additionally, we proposed to remove the denominator exception, which allowed for medical reason(s) for not discussing rehabilitative therapy options. We agreed that MIPS eligible clinicians should discuss rehabilitative therapy options with all patients/caregivers as these therapies play an important role in not only improving function in the patient, but also their quality of life.</p> <p>We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>
<p><b>Comment:</b> One commenter supported the addition of telehealth reporting for measure Q293.</p> <p><b>Response:</b> We thank the commenter for supporting the addition of telehealth reporting for this measure.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q293 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.62 Initiation and Engagement of Alcohol and Other Drug Dependence Treatment**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	305
<b>CMS eCQM ID:</b>	CMS137v9
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	eCQM Specifications
<b>Current Measure Description:</b>	Percentage of patients 13 years of age and older with a new episode of alcohol or other drug abuse or (AOD) dependence who received the following. Two rates are reported. a. Percentage of patients who initiated treatment including either an intervention or medication for the treatment of AOD abuse or dependence within 14 days of the diagnosis. b. Percentage of patients who engaged in ongoing treatment including two additional interventions or a medication for the treatment of AOD abuse or dependence within 34 days of the initiation visit. For patients who initiated treatment with a medication, at least one of the two engagement events must be a treatment intervention.
<b>Substantive Change:</b>	<b>The definition is revised to read:</b> The initiation visit is the first visit for alcohol or other drug dependence treatment within 14 days after a diagnosis of alcohol or other drug dependence. Treatment includes inpatient AOD admissions, outpatient visits, intensive outpatient encounters or partial hospitalization. The Intake Period: January 1-November 13 of the measurement year. The Intake Period is used to capture new episodes of Alcohol or Drug Dependence. The November 13 cut-off date ensures that all services can occur before the measurement period ends.  <b>Updated numerator logic:</b> Updated 47 days to 48 days for the period within which Initial Dependence Diagnosis must occur.  <b>Updated stratification logic:</b> Refinement of CQL logic to include patients at age 17 at end of measurement period.
<b>Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the definition to revise the intake period to ensure all services can occur before the performance period ends. The numerator logic timing is also updated to reflect this change.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q305 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.63 Cervical Cancer Screening**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	309
<b>CMS eCQM ID:</b>	CMS124v9
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	eCQM Specifications
<b>Current Measure Description:</b>	Percentage of women 21-64 years of age who were screened for cervical cancer using either of the following criteria: <ul style="list-style-type: none"> <li>• Women age 21-64 who had cervical cytology performed every 3 years</li> <li>• Women age 30-64 who had cervical cytology/human papillomavirus (HPV) co-testing performed every 5 years.</li> </ul>
<b>Substantive Change:</b>	<p><b>The description is revised to read:</b> Percentage of women 21-64 years of age who were screened for cervical cancer using either of the following criteria:  <ul style="list-style-type: none"> <li>* Women age 21-64 who had cervical cytology performed within the last 3 years</li> <li>* Women age 30-64 who had cervical human papillomavirus (HPV) testing performed within the last 5 years</li> </ul> </p> <p><b>The guidance is revised to read:</b> To ensure the measure is only looking for a cervical cytology test only after a woman turns 21 years of age, the youngest age in the initial population is 23.                      Patient self-report for procedures, as well as diagnostic studies should be recorded in 'Procedure, Performed' template or 'Diagnostic Study, Performed' template in QRDA-1.                      This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (<a href="https://ecqi.healthit.gov/qdm">https://ecqi.healthit.gov/qdm</a>) for more information on the QDM. This eCQM is a patient-based measure.</p> <p><b>The numerator is revised to read:</b> Women with one or more screenings for cervical cancer. Appropriate screenings are defined by any one of the following criteria:  <ul style="list-style-type: none"> <li>* Cervical cytology performed during the measurement period or the two years prior to the measurement period for women who are at least 21 years old at the time of the test</li> <li>* Cervical human papillomavirus (HPV) testing performed during the measurement period or the four years prior to the measurement period for women who are 30 years or older at the time of the test.</li> </ul> </p> <p><b>Updated logic:</b> Updated logic definition to use HPV only every 5 years and remove Pap test.</p>
<b>Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the measure to align with current clinical guidelines, which removes the Pap test requirement and allow HPV only testing every 5 years. This update is reflected in revisions to the description, guidance, numerator, and logic.
<b>Comment:</b>	<p>One commenter opposed the proposed changes to measure Q309, citing that the proposal was to update the measure to align with the current clinical guidelines, which removes the Pap/HPV test (co-testing) requirement and allow only HPV testing every 5 years. While this proposed change would align to the recently updated American Cancer Society (ACS) cervical cancer screening guidelines, the commenter stated the change is not consistent with the current recommendations from the American College of Obstetricians and Gynecologists (ACOG), the United States Preventive Services Task Force (USPSTF), the National Committee for Quality Assurance (NCQA), and numerous other guideline bodies or current clinical practice in the United States.</p> <p>In response to the ACS guidelines, ACOG issued a statement affirming their current guidelines, which encompasses all three screening regimens (high-risk human papillomavirus testing alone, cervical cytology alone, and co-testing). In August 2018, the USPSTF recommended screening women aged 30 to 65 years, screening every 3 years with cervical cytology alone, every 5 years with high-risk human papillomavirus (hrHPV) testing alone, or every 5 years with hrHPV testing in combination with cytology (contesting)3 with an “A” rating.</p> <p>In addition, the NCQA HEDIS measure is also in conflict with the proposed revisions to the MIPS measure. The NCQA HEDIS measure for cervical cancer screening includes all three screening regimens (high-risk human papillomavirus testing alone, cervical cytology alone, and co-testing). Lastly, the proposed change to the MIPS quality measure eliminated the recommended option of co-testing for cervical cancer, a change that is inconsistent with current guidelines recommended by ACOG, the USPSTF and NCQA. Accordingly, the leading authorities in cervical cancer screening are on record that co-testing is a valuable cervical cancer screening test. The commenter asked for measure Q309 to be retained without any revisions. A second commenter sought clarification on whether the measure is specifically looking at HPV only testing every 5 years. The description and logic have conflicting definitions between the usage of cervical cytology and HPV testing, and solely HPV testing. A third commenter cited the proposal to change the measure description to remove “co-testing” from the criteria for HPV testing. The commenter indicated that it had affirmed its 2018 Practice Advisory, which includes all three cervical cancer screening strategies (high-risk human papillomavirus testing alone, cervical cytology alone, and co-testing). The commenter’s current screening guidelines reflect a balance of benefit and potential harms and support shared decision-making between patients and their clinicians and recommended that changes to this measure not be finalized.</p> <p><b>Response:</b> We thank the commenters for their comments. The revisions to this measure are in alignment with the updated clinical guidelines. The guidelines for patients 30 to 65 years of age recommend that either; cervical cytology only be completed every 3 years or hrHPV testing alone every 5 years or co-testing (hrHPV + cervical cytology) every 5 years. The guidelines now allow hrHPV testing alone every 5 years as opposed to requiring that co-testing be completed every 5 years. However, if co-testing was completed every 5 years this would be numerator compliant as co-testing contains the hrHPV testing component. Conversely, if co-testing was completed every 3 years, this would also suffice for numerator compliance as the co-testing has the cervical cytology component. Therefore, the components of screening are all still included for the purposes of achieving the quality action for this measure, but the requirements have been revised to align with the updated guidelines. We encourage the commenters to reach out to the measure steward to discuss revisions in language to help clarify the numerator component for possible implementation in future years.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q309 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>

**D.64 Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented**

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	317
CMS eCQM ID:	CMS22v9
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Specifications, eCQM Specifications, MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older seen during the submitting period who were screened for high blood pressure AND a recommended follow-up plan is documented based on the current blood pressure (BP) reading as indicated.
Substantive Change:	<p><b>The description is revised to read: For all collection types:</b> Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.</p> <p><b>The guidance is revised to read: For the eCQM Specifications collection type:</b> This eCQM is an episode-based measure and should be reported at every visit for patients aged 18 years and older. This measure will be calculated based upon the clinical actions performed at every visit during the measurement period for each patient. The measure requires that blood pressure measurements (i.e., diastolic and systolic) be obtained during each visit to determine the blood pressure reading used to evaluate if an intervention is needed. Both the systolic and diastolic blood pressure measurements are required for inclusion. If there are multiple blood pressures obtained during a patient visit, only the last, or most recent, pressure measurement will be used to evaluate the measure requirements. The intent of this measure is to screen patients for high blood pressure and provide recommended follow-up as indicated. The documented follow-up plan must be related to the current blood pressure reading as indicated, example: "Patient referred to primary care provider for BP management." This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (<a href="https://ecqi.healthit.gov/qdm">https://ecqi.healthit.gov/qdm</a>) for more information on the QDM.</p> <p><b>The instructions are revised to read: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs collections type:</b> This measure is to be submitted at each visit for patients seen during the measurement period. Merit-based Incentive Payment System (MIPS) eligible clinicians who submit the measure must perform the blood pressure screening at each patient visit by a MIPS eligible clinician and may not obtain measurements from external sources.</p> <p><b>The initial patient population is revised to read: For the eCQM Specifications collection type:</b> All patient visits for patients aged 18 years and older at the beginning of the measurement period.</p> <p><b>The denominator is revised to read: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs collections type:</b> All patient visits for patients aged 18 years and older at the beginning of the measurement period.</p> <p><b>The denominator exception is revised to read: For the eCQM Specifications collection type:</b></p> <ol style="list-style-type: none"> <li>1. Documentation of medical reason(s) for not screening for high blood pressure (e.g., patient is in an urgent or emergent medical situation where time is of the essence and to delay treatment would jeopardize the patient's health status).</li> <li>2. Documentation of patient reason(s) for not screening for blood pressure measurements or for not ordering an appropriate follow-up intervention if patient is pre-hypertensive or hypertensive (e.g., patient refuses).</li> </ol> <p><b>Updated denominator exception logic: For the eCQM Specifications collection type:</b> Added:</p> <ol style="list-style-type: none"> <li>1. Follow-up within 1 year</li> <li>2. Follow-up within 4 weeks</li> </ol> <p><b>The numerator is revised to read: For all collection types:</b> Patient visits where patients were screened for high blood pressure AND have a recommended follow-up plan documented, as indicated, if the blood pressure is pre-hypertensive or hypertensive.</p> <p><b>Updated numerator definition: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types:</b> Revised: Patients with a Documented Reason for not Screening or no Follow-Up Plan for High Blood Pressure (Denominator Exception) –</p> <ul style="list-style-type: none"> <li>• Documentation of medical reason(s) for not screening for high blood pressure (e.g., patient is in an urgent or emergent medical situation where time is of the essence and to delay treatment would jeopardize the patient's health status).</li> <li>• Documentation of patient reason(s) for not screening for blood pressure measurements or for not ordering an appropriate follow-up intervention if patient is pre-hypertensive or hypertensive (e.g., patient refuses).</li> </ul> <p><b>The numerator notes is revised to read: For the Medicare Part B Claims Measure Specifications and the MIPS CQMs Specifications collection types:</b> Although the recommended screening interval for a normal BP reading is every 2 years, to meet the intent of this measure, BP screening and follow-up must be performed at every patient visit. For patients with Normal blood pressure, a follow-up plan is not required (G8783). Denominator Exception(s) are determined on the date of the denominator eligible encounter.</p> <p><b>Per the ‘Telehealth Guidance for Electronic Clinical Quality Measures (eCQMs) for Eligible Professional/Eligible Clinician 2021 Quality Reporting’:</b> Medicare telehealth eligible codes found in any encounter value set must only be used for in-person encounters for the following eCQMs.</p>
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No

Category	Description
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to update the measure frequency so that the clinical quality action is occurring at all denominator eligible visits. Hypertension is a prevalent condition, and the United States Preventive Services Task Force (USPSTF) found good evidence that screening for and treatment of high blood pressure in adults substantially reduces the incidence of cardiovascular events. In alignment with this update, the measure language has been revised to reflect the change in frequency to all visits.</p> <p>Additionally, the eCQM Specifications collection type revised the logic to align with the measure’s reporting frequency update, as well as updating the denominator exception logic to add two elements that were missing from the existing logic to ensure that all valid denominator exception options are accounted for within the logic. The denominator exception language was revised in the eCQM Specifications collection type to follow best practices and add clarity to implementing the measure. To align with this update, the definition for denominator exception was revised in the Medicare Part B Claims Measure Specifications and MIPS CQMs Specifications collection types.</p> <p>We proposed to remove telehealth encounters from the denominator of the eCQM Specifications collection type as telehealth is not an appropriate setting for this measure, as well as to align with the other collection types. This guidance can be found in a separate document that will be published on the eCQI Resource Center.</p> <p>In the event the proposed substantive change(s) were finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes.</p>
<p><b>Comment:</b> One commenter opposed the proposed change in the frequency of blood pressure screening required for this measure from annual to every patient encounter. CMS states that this is in response to the update on screening recommendations from the United States Preventive Services Task Force (USPSTF).</p> <p>The USPSTF is updating their guidance, but their most recent draft guidance states the following on recommended screening frequency: The USPSTF suggests annual screening for hypertension in adults age 40 years or older and for adults at increased risk for hypertension (such as persons with high-normal blood pressure, who are overweight or obese, or who are African American). Screening less frequently (i.e., every 3 to 5 years) is appropriate for adults ages 18 to 39 years not at increased risk for hypertension and with a prior normal blood pressure reading. CMS’s proposed change is in opposition to recommended best practices and unnecessarily creates additional burden for clinicians. Meaningful measures should be based on best evidence.</p> <p><b>Response:</b> While the USPSTF does give these suggestions, they also note that available evidence regarding optimal screening intervals for hypertension are limited. However, given the prevalence of the condition, as hypertension affects approximately 45% of the adult U.S. population (<a href="https://www.cdc.gov/nchs/products/databriefs/db364.htm">https://www.cdc.gov/nchs/products/databriefs/db364.htm</a>), and is a major contributing factor to chronic conditions such as heart failure, heart attack, stroke, and chronic kidney disease, we believe it is important to screen blood pressure often to ensure the opportunity to offer a timely diagnoses.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q317 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>

**D.65 Falls: Screening for Future Fall Risk**

Category	Description
<b>NQF # / eCQM NQF #:</b>	0101 / N/A
<b>Quality#:</b>	318
<b>CMS eCQM ID:</b>	CMS139v9
<b>National Quality Strategy Domain:</b>	Patient Safety
<b>Current Collection Type:</b>	eCQM Specifications, CMS Web Interface Measure Specifications
<b>Current Measure Description:</b>	Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.
<b>Substantive Change:</b>	<b>Modified collection type:</b> eCQM Specifications <b>Updated denominator exclusion: For the eCQM Specifications collection type:</b> Removed: Exclude patients who were non-ambulatory at some point in the measurement period.
<b>Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to remove the denominator exclusion for non-ambulatory patients to address implementation challenges as there is a lack of available documentation for a non-ambulatory status.  We proposed to remove the CMS Web Interface Measure Specifications collection type. This collection type was proposed to be sunset for the purposes of MIPS starting with the 2021 performance year. We have determined it is not fiscally viable, feasible, or sustainable for MIPS to continue this collection type/submission type due to an 80 percent reduction and a continued decrease in interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures. For further rationale, please see section IV.A.3.c.(1)(c) of this final rule.
<b>Comment:</b> One commenter supported the proposal to remove the denominator exclusion for non-ambulatory patients.	
<b>Response:</b> We thank the commenter for supporting the change to this measure.	
After consideration of public comments, we are finalizing the changes to measure Q318 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years with the exception of the CMS Web Interface Specifications collection type. At § 414.1305, we proposed to modify the definition of the terms collection type and submission type by removing the CMS Web Interface Specifications as an available option starting with the 2023 payment year (85 FR 50290); however, the CMS Web Interface Measure Specifications collection type will be an available option for an extension of one additional year (2021 MIPS performance period/2023 MIPS payment year) and will be removed as a collection and submission type starting with the 2022 MIPS performance period/2024 MIPS payment year. None of the substantive changes above will be applied to the CMS Web Interface Measure Specifications for the 2021 MIPS performance period. The CMS Web Interface Specifications for the 2021 MIPS performance period will reflect the 2020 CMS Web Interface Specifications.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.66 Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	1525 / N/A
<b>Quality#:</b>	326
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with nonvalvular atrial fibrillation (AF) or atrial flutter who were prescribed warfarin OR another FDA-approved oral anticoagulant drug for the prevention of thromboembolism during the measurement period.
<b>Substantive Change:</b>	<p><b>The denominator is revised to read: For all collection types:</b> All patients aged 18 years and older with a diagnosis of nonvalvular AF or atrial flutter who do not have a documented CHA<sub>2</sub>DS<sub>2</sub>-VASc risk score of 0 or 1 for men or 0, 1, or 2 for women.</p> <p><b>The denominator/numerator note is revised to read: For all collection types:</b> The intent of the denominator exclusion G9931 is to allow patients with a low risk for a thromboembolic event (i.e. a CHA<sub>2</sub>DS<sub>2</sub>-VASc score of 0 or 1 for men or 0, 1, or 2 for women) to be excluded from the sample. This denominator exclusion serves as documentation that a patient’s risk for a thromboembolic event was appropriately assessed using the CHA<sub>2</sub>DS<sub>2</sub>-VASc scoring tool and that the risk was low enough to not warrant anticoagulation treatment. To exclude low risk patients, eligible clinicians must use the CHA<sub>2</sub>DS<sub>2</sub>-VASc assessment tool to determine a patient’s risk score and must document either the numeric score (i.e. 0 or 1 for men or 0, 1, or 2 for women) or all the individual risk factors assessed to support an assessment of the CHA<sub>2</sub>DS<sub>2</sub>-VASc score.</p> <p><b>Updated denominator exclusion: For all collection types:</b> Revised: Documentation of CHA<sub>2</sub>DS<sub>2</sub>-VASc risk score of 0 or 1 for men; 0, 1, or 2 for women.</p> <p><b>Updated denominator: For all collection types:</b> Added telehealth as eligible encounter.</p>
<b>Steward:</b>	American Heart Association
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to revise the measure to reflect the updated guidelines regarding when it is clinically appropriate to prescribe an oral anticoagulant for patients that are diagnosed with atrial fibrillation or atrial flutter. This update is reflected in the denominator statement, denominator note, and denominator exclusion.</p> <p>We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>
<p><b>Comment:</b> One commenter supported the addition of telehealth reporting for measure Q326.</p> <p><b>Response:</b> We thank the commenter for supporting the addition of telehealth reporting for this measure.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q326 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

**D.67 Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse)**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	331
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Efficiency and Cost Reduction
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients, aged 18 years and older, with a diagnosis of acute viral sinusitis who were prescribed an antibiotic within 10 days after onset of symptoms.
<b>Substantive Change:</b>	<b>Updated denominator:</b> Added telehealth as eligible encounter.
<b>Steward:</b>	American Academy of Otolaryngology – Head and Neck Surgery Foundation
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.
<p><b>Comment:</b> Several commenters supported the addition of telehealth as an eligible encounter to measure Q331. The commenter appreciated CMS recognizing telehealth as an appropriate modality for effective, high quality patient care.</p> <p><b>Response:</b> We thank the commenters for supporting the substantive change to measure Q331.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q331 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.68 Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use)**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	332
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Efficiency and Cost Reduction
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with a diagnosis of acute bacterial sinusitis that were prescribed amoxicillin, with or without clavulanate, as a first line antibiotic at the time of diagnosis.
<b>Substantive Change:</b>	<b>Updated denominator:</b> Added telehealth as eligible encounter.
<b>Steward:</b>	American Academy of Otolaryngology – Head and Neck Surgery Foundation
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.
<p><b>Comment:</b> Several commenters supported the addition of telehealth as an eligible encounter to measure Q332. The commenter appreciated CMS recognizing telehealth as an appropriate modality for effective, high quality patient care.</p> <p><b>Response:</b> We thank the commenters for supporting the change to measure Q332.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q332 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.69 Maternity Care: Elective Delivery or Early Induction Without Medical Indication at < 39 Weeks (Overuse)**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	335
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Patient Safety
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients, regardless of age, who gave birth during a 12-month period who delivered a live singleton at < 39 weeks of gestation completed who had elective deliveries or early inductions without medical indication.
<b>Substantive Change:</b>	<p><b>The description is revised to read:</b> Percentage of patients, regardless of age, who gave birth during a 12-month period who delivered a live singleton at &lt; 39 weeks of gestation completed who had elective deliveries by cesarean section (C-section), or early inductions of labor, without medical indication.</p> <p><b>Updated instructions:</b> Revised: This measure is to be submitted each time a procedure is performed for patients undergoing delivery by C-section, or induction of labor, at less than 39 weeks gestation during the performance period.</p> <p><b>The denominator is revised to read:</b> All patients, regardless of age, who gave birth during a 12-month period delivering a live singleton at &lt; 39 weeks of gestation completed.</p> <p><b>The numerator is revised to read:</b> Patients who had elective deliveries by C-section, or early inductions of labor, without medical indication.</p> <p><b>Updated numerator options:</b> Revised:  <b>Performance Met:</b> Early elective delivery by C-section, or early elective induction, not performed (&lt; 39 weeks gestation).  <b>Performance Not Met:</b> Early elective delivery by C-section, or early elective induction, performed (&lt; 39 weeks gestation).</p>
<b>Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Outcome
<b>Rationale:</b>	We proposed to update the description and instructions to provide further clarity regarding what suffices for elective deliveries. Additionally, we proposed to move the “without medical indication” from the denominator to the numerator as the denominator should capture all patients with a single live birth at less than 39 weeks gestation. The numerator assesses whether or not there was medical indication for an early elective delivery by C-section, or early elective induction. This update will better align the language with the measure intent.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q335 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.70 Maternity Care: Postpartum Follow-up and Care Coordination**

Category	Description
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	336
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care within 8 weeks of giving birth and who received a breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update.
<b>Substantive Change:</b>	<b>The description is revised to read:</b> Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care before or at 8 weeks of giving birth and received the following at the postpartum visit: breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update.
<b>Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the measure description for clarity and readability so that it is easy to understand the measure intent. We proposed a substantive change to the description; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state: Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care before or at 8 weeks of giving birth and received the following at a postpartum visit: breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update. This additional refinement does not affect the intent of the proposed substantive change.  We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q336 as indicated for the 2021 MIPS performance period/2023 MIPS payment year and future years.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.71 Optimizing Patient Exposure to Ionizing Radiation: Appropriateness: Follow-up CT Imaging for Incidentally Detected Pulmonary Nodules According to Recommended Guidelines**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	364
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of final reports for CT imaging studies with a finding of an incidental pulmonary nodule for patients aged 35 years and older that contain an impression or conclusion that includes a recommended interval and modality for follow-up (e.g., type of imaging or biopsy) or for no follow-up, and source of recommendations (e.g., guidelines such as Fleischner Society, American Lung Association, American College of Chest Physicians).
<b>Substantive Change:</b>	<b>Updated denominator note:</b> Added: Granulomas, hamartomas or lesions with internal fat, or other characteristically benign findings are not considered incidental findings in the context or intent of this measure. Therefore, they are not included in the measure denominator. However, generally accepted radiology practices should be followed for communication and management of these characteristically benign findings.
<b>Steward:</b>	American College of Radiology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add language to the denominator note to add clarity as to which incidental findings are not appropriate for the purposes of this measure. Some incidental findings are widely known to be benign and would therefore not necessitate a specific documentation of a recommendation of no follow-up. This will reduce clinician burden and ensure only the appropriate patients are included in the denominator eligible population.
<p>We proposed a substantive change to the denominator note; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state: Granulomas, hamartomas or lesions with internal fat, or other characteristically benign findings are not considered incidental findings in the context or intent of this measure. Therefore, they are not included in the measure denominator. However, generally accepted radiology practices should be followed with respect to communication and management of these characteristically benign findings.</p> <p><b>Comment:</b> One commenter recognized the changes to measure Q364 without issue. A second commenter supported the changes as they better fit the intent of these measures and will lessen clinical burden to some extent.</p> <p><b>Response:</b> We thank the commenters for supporting the changes to this measure.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q364 as indicated for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. **D.72 Depression Remission at Twelve Months**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0710 / 0710e
<b>Quality#:</b>	370
<b>CMS eCQM ID:</b>	CMS159v9
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event date.
<b>Substantive Change:</b>	<p><b>Modified collection type:</b> eCQM Specifications and MIPS CQMs Specifications</p> <p><b>Updated guidance: For the eCQM Specifications collection type:</b> Added: When a baseline assessment is conducted with PHQ 9M, the follow-up assessment can use either a PHQ 9M or PHQ 9. This eCQM is a patient-based measure. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (<a href="https://ecqi.healthit.gov/qdm">https://ecqi.healthit.gov/qdm</a>) for more information on the QDM.</p> <p><b>Updated denominator: For the MIPS CQMs Specifications collection type:</b> Added telehealth with qualified non-physician healthcare professional.</p> <p><b>Updated denominator exclusion: For the eCQM Specifications collection type:</b> Revised: Patients with a diagnosis of personality disorder emotionally labile.</p>
<b>Steward:</b>	Minnesota Community Measurement
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Outcome
<b>Rationale:</b>	<p>We proposed to update the guidance for eCQM Specifications collection type to add clarity regarding the assessment that may be used for the follow-up assessment for the purposes of meeting performance for this measure. Additionally, we proposed to revise the denominator exclusion language for a diagnosis of personality disorder to further clarify ensuring the correct patient population is being excluded from quality action assessment.</p> <p>We proposed to update the denominator of the MIPS CQMs Specifications collection type to include telehealth encounters with qualified non-physician healthcare professionals as it would be appropriate to assess this patient population for numerator compliance.</p> <p>We proposed to remove the CMS Web Interface Measure Specifications collection type. This collection type was proposed to be sunset for the purposes of MIPS starting with the 2021 performance year. We have determined it is not fiscally viable, feasible, or sustainable for MIPS to continue this collection type/submission type due to an 80 percent reduction and a continued decrease in interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures. For further rationale, please see section IV.A.3.c.(1)(c) of this final rule.</p>
<p>We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q370 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years with the exception of the CMS Web Interface Specifications collection type. At § 414.1305, we proposed to modify the definition of the terms collection type and submission type by removing the CMS Web Interface Specifications as an available option starting with the 2023 payment year (85 FR 50290); however, the CMS Web Interface Measure Specifications collection type will be an available option for an extension of one additional year (2021 MIPS performance period/2023 MIPS payment year) and will be removed as a collection and submission type starting with the 2022 MIPS performance period/2024 MIPS payment year. None of the substantive changes above will be applied to the CMS Web Interface Measure Specifications for the 2021 MIPS performance period. The CMS Web Interface Measure Specifications for the 2021 MIPS performance period will reflect the 2020 CMS Web Interface Measure Specifications. Also, it should be noted that the CMS Web Interface Specifications collection type is not able to establish a benchmark for this measure. Thus, this measure will be excluded from the Merit-based Incentive Payment System (MIPS) scoring in accordance with § 414.1380(b)(1)(i)(A)(2)(i) provided that the measure meets the data completeness requirement and the data applicable to the measure is reported via the CMS Web Interface Measure Specifications.</p>

**D.73 Closing the Referral Loop: Receipt of Specialist Report**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	374
<b>CMS eCQM ID:</b>	CMS50v9
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Current Collection Type:</b>	eCQM Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients with referrals, regardless of age, for which the referring provider receives a report from the provider to whom the patient was referred.
<b>Substantive Change:</b>	<p><b>Updated logic: For the eCQM Specifications collection type:</b> Updated logic for ‘First Referral During Measurement Period’ to allow an additional, optional way to capture the first referral.</p> <p><b>Updated denominator: For all collection types:</b> Added telehealth as eligible encounter.</p> <p><b>Updated numerator: For the eCQM Specifications collection type:</b> Removed pathology consult note from ‘Consultant Report’ value set.</p>
<b>Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to update the logic for ‘First Referral During Measurement Period’ to allow for a referral order, in addition to a referral being performed. This revision is consistent with the measure intent and provides options to capture the first referral within the electronic medical record. Additionally, we proposed to remove the pathology consult note from the ‘Consultant Report’ value set based upon terminology updates as the availability of the general consult note is available as an option.</p> <p>We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>
<p><b>Comment:</b> One commenter supported the addition of telehealth reporting for measure Q374.</p> <p><b>Response:</b> We thank the commenter for supporting the addition of telehealth reporting for this measure.</p> <p><b>Comment:</b> One commenter requested additional clarification on the proposed updated eCQM logic to capture a referral order without a referral actually being made or conducted. It is unclear how a clinician can close the referral loop if a referral does not occur.</p> <p><b>Response:</b> This revision is in alignment with the intent of the measure, which is to ensure patient’s referred for an outside consultation complete the encounter with a consult report being returned to the referring physician. As the measure steward, we will review and consider revision of the coding within the measure for possible implementation in future years.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q374 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

**D.74 Functional Status Assessments for Congestive Heart Failure**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	377
<b>CMS eCQM ID:</b>	CMS90v9
<b>National Quality Strategy Domain:</b>	Person and Caregiver-Centered Experience and Outcomes
<b>Current Collection Type:</b>	eCQM Specifications
<b>Current Measure Description:</b>	Percentage of patients 18 years of age and older with congestive heart failure who completed initial and follow-up patient-reported functional status assessments.
<b>Substantive Change:</b>	<p><b>Updated logic:</b>  <b>Initial Patient Population:</b> Revised timing of congestive heart failure (CHF) diagnosis in the initial population logic so it overlaps before the measurement period.  <b>Qualifying Encounter:</b> Revised timing of the encounter from the start of the measurement period to the end of the measure period.  <b>Numerator:</b></p> <ul style="list-style-type: none"> <li>• Revised to ensure assessments completed during the encounter count toward the numerator.</li> <li>• Revised KCCQ logic to address the 6 domain subcategories used to account for the KCCQ assessment total score.</li> <li>• Added the KCCQ Total Assessment Score logic to include the summary score as an option to meet the KCCQ assessment requirement.</li> <li>• Revised timing and logic of the follow-up functional status assessment (FSA) to relate to the initial FSA performed and not the encounter.</li> <li>• Revised measurement period for the Veterans RAND 12 Item Health Survey (VR-12) to allow for the initial FSA to occur prior to the measurement period if the encounter occurs within the first few days of the measurement period.</li> </ul>
<b>Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the initial patient population logic to ensure the CHF diagnosis occurs before the denominator eligible encounter, which aligns more closely with the measure intent. We proposed to update the qualifying encounter logic to account for leap year. This refinement will eliminate the need to adjust the number of days for leap years. Additionally, we proposed to update the numerator logic for the Kansas City Cardiomyopathy Questionnaire (KCCQ) FSA so that it can be reported by either utilizing the six domain subcategories or the total score. This added flexibility better aligns with different clinical workflows, and is consistent with measure intent. The logic and timing were revised to relate to the initial functional status (FSA) and not the encounter to better align with the measure intent. We proposed, to all the VR-12, to allow for the initial FSA to occur prior to the measurement in the instance the encounter occurs within the first few days of the measurement period to improve harmonization with the measure intent.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q377 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.75 Children Who Have Dental Decay or Cavities**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	378
<b>CMS eCQM ID:</b>	CMS75v9
<b>National Quality Strategy Domain:</b>	Community/Population Health
<b>Current Collection Type:</b>	eCQM Specifications
<b>Current Measure Description:</b>	Percentage of children, age 0-20 years, who have had tooth decay or cavities during the measurement period.
<b>Substantive Change:</b>	<p><b>The description is revised to read:</b> Percentage of children, 6 months - 20 years of age, who have had tooth decay or cavities during the measurement period.</p> <p><b>The stratification is revised to read:</b> None</p> <p><b>The initial patient population is revised to read:</b> Children, 6 months - 20 years of age, with a visit during the measurement period.</p> <p><b>Updated denominator:</b> Removed:                  "Office Visit" (2.16.840.1.113883.3.464.1003.101.12.1001)                  "Preventive Care - Established Office Visit, 0 to 17" (2.16.840.1.113883.3.464.1003.101.12.1024)                  "Preventive Care Services - Established Office Visit, 18 and Up" (2.16.840.1.113883.3.464.1003.101.12.1025)                  "Preventive Care Services-Initial Office Visit, 18 and Up" (2.16.840.1.113883.3.464.1003.101.12.1023)                  "Preventive Care- Initial Office Visit, 0 to 17" (2.16.840.1.113883.3.464.1003.101.12.1022)</p>
<b>Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Outcome
<b>Rationale:</b>	We proposed to raise the minimum age for this measure to 6 months to better align with average tooth eruption. Children under 6 months of age are less likely to have teeth and would therefore not meet numerator criteria, which is why they are being removed from the initial patient population. Additionally, we proposed to update the denominator to limit the denominator eligible encounters to the "Clinical Oral Evaluation" value set as the clinical quality action is more appropriate for the dentistry MIPS eligible clinician.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q378 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.76 Primary Caries Prevention Intervention as Offered by Primary Care Providers, including Dentists**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	379
<b>CMS eCQM ID:</b>	CMS74v10
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	eCQM Specifications
<b>Current Measure Description:</b>	Percentage of children, age 0-20 years, who received a fluoride varnish application during the measurement period.
<b>Substantive Change:</b>	<p><b>The description is revised to read:</b> Percentage of children, 6 months - 20 years of age, who received a fluoride varnish application during the measurement period.</p> <p><b>The stratification is revised to read:</b>                      Population 1: age 6 months-5 years                      Population 2: age 6-12                      Population 3: age 13-20</p> <p><b>The initial patient population is revised to read:</b> Children, 6 months - 20 years of age, with a visit during the measurement period.</p>
<b>Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to raise the minimum age for this measure to 6 months to better align with average tooth eruption. Children under 6 months of age are less likely to have teeth and would therefore not meet numerator criteria, which is why they are being removed from the initial patient population.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q379 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.77 Child and Adolescent Major Depressive Disorder (MDD): Suicide Risk Assessment**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / 1365e
<b>Quality#:</b>	382
<b>CMS eCQM ID:</b>	CMS177v9
<b>National Quality Strategy Domain:</b>	Patient Safety
<b>Current Collection Type:</b>	eCQM Specifications
<b>Current Measure Description:</b>	Percentage of patient visits for those patients aged 6 through 17 years with a diagnosis of major depressive disorder with an assessment for suicide risk.
<b>Substantive Change:</b>	<b>Updated guidance:</b> Added: In recognition of the growing use of integrated and team-based care, the diagnosis of depression and the assessment for suicide risk need not be performed by the same provider or clinician.
<b>Steward:</b>	Mathematica
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	The measure steward updated the guidance statement based upon technical expert feedback to reflect that team-based care would be appropriate for this measure. We agreed that this guidance update is clinically appropriate and aligns better with clinical care workflows.
<p><b>Comment:</b> One commenter stated that guidance reads “A suicide risk assessment should be performed at every visit for major depressive disorder during the measurement period.” Feedback from specialists in this field voice the following: “Our concern is that therapists provide group visits and some of those teens have MDD on their problem list. Currently, suicide risk assessments are not conducted at group visits. Most patients who attend group visits also have a cadence of seeing their therapists separately.” The commenter recommended that this requirement make exceptions of the required suicide assessment during group visits.</p> <p><b>Response:</b> We thank the commenter for their comment. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q382 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.78 Adherence to Antipsychotic Medications For Individuals with Schizophrenia**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	1879 / N/A
<b>Quality#:</b>	383
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Patient Safety
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of individuals at least 18 years of age as of the beginning of the measurement period with schizophrenia or schizoaffective disorder who had at least two prescriptions filled for any antipsychotic medication and who had a Proportion of Days Covered (PDC) of at least 0.8 for antipsychotic medications during the measurement period (12 consecutive months).
<b>Substantive Change:</b>	<p><b>The description is revised to read:</b> Percentage of individuals at least 18 years of age with schizophrenia or schizoaffective disorder as of the beginning of the performance period who had at least two prescriptions filled for any antipsychotic medication and who had a Proportion of Days Covered (PDC) of at least 0.8 for antipsychotic medications during the performance period.</p> <p><b>Updated instructions:</b> Revised: This measure is to be submitted a minimum of once per performance period for all patients with a preexisting (before the performance period) diagnosis of schizophrenia or schizoaffective disorder who are seen during the performance period.</p> <p><b>The denominator statement is revised to read:</b> Individuals at least 18 years of age with schizophrenia or schizoaffective disorder as of the beginning of the performance period and at least two prescriptions filled for antipsychotic medications during the performance period.</p> <p><b>Updated denominator criteria:</b> Revised the timing for the diagnosis for schizophrenia or schizoaffective disorder to be prior to the performance period.</p> <p><b>Updated denominator exclusion:</b> Added opioid abuse with intoxication with perceptual disturbance to diagnosis for dementia.</p> <p><b>Updated numerator note:</b> Revised: PDC NUMERATOR: The PDC numerator is the sum of the days covered by the days’ supply of all antipsychotic prescriptions. The period covered by the PDC starts on the day within the performance period when the first prescription is filled (i.e., the index date) and lasts through the end of the performance period, or death, whichever comes first. For prescriptions with a days’ supply that extends beyond the end of the performance period, count only the days for which the drug was available to the individual during the performance period. If there are prescriptions for the same drug (generic name) on the same date of service, keep the prescription with the largest days’ supply. If prescriptions for the same drug (generic name) overlap, then adjust the prescription start date to be the day after the previous fill has ended.</p>
<b>Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Intermediate Outcome
<b>Rationale:</b>	We proposed to update the measure language to reflect that the diagnosis of schizophrenia or schizoaffective disorder should be prior to the performance period as this aligns more closely to the intent of the measure and allows for assessment of medication adherence over a longer timeframe. We proposed to remove the “12 consecutive months” from the description as this was causing confusion amongst MIPS eligible clinicians. The denominator exclusion coding was expanded to include opioid abuse with intoxication with perceptual disturbance as this is appropriate for identifying patients with a dementia diagnosis and therefore, applicable to the denominator exclusion. Additionally, we proposed to update the numerator note to clarify that the index date is the date the prescription was first filled during the performance period.
<p>We, as the measure steward, have decided not to finalize the substantive change to revise the timing of the diagnosis for schizophrenia or schizoaffective disorder to be prior to the performance period, to ensure patient safety and drive positive clinical outcomes. Research has shown that adherence to antipsychotic medications in individuals with first-episode psychosis (FEP) improves patient outcomes while preventing downstream harm. Treatment FEP has shown favorable outcomes, including positive effects on likelihood of remission and risk/rate of relapse, and improvement in cognitive deficits (Karson, C., et al. <i>Neuropsychiatric Disease and Treatment</i>, 12, 57-67). Given the potential long-term benefits for treatment of FEP, we believe that it is important to assess all patients with a diagnosis for schizophrenia or schizoaffective disorder for medication adherence, regardless of when diagnosed. This aligns with our healthcare priority of promoting effective treatment of chronic diseases and current clinical best practices.</p> <p>We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q383 as indicated for the 2021 MIPS performance period/2023 MIPS payment year and future years, with the exception of the revisions in the timing of diagnosis for schizophrenia or schizoaffective disorder. This revision is located within the description, instructions, denominator statement, and denominator criteria and will be updated as needed for clarity of the concept as needed within the specification.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

**D.79 Amyotrophic Lateral Sclerosis (ALS) Patient Care Preferences**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	386
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Person and Caregiver-Centered Experience and Outcomes
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients diagnosed with Amyotrophic Lateral Sclerosis (ALS) who were offered assistance in planning for end of life issues (e.g., advance directives, invasive ventilation, hospice) at least once annually.
<b>Substantive Change:</b>	<b>Updated denominator:</b> Added telehealth as eligible encounter.
<b>Steward:</b>	American Academy of Neurology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.
<b>Comment:</b> One commenter supported the addition of telehealth reporting for measure Q386.	
<b>Response:</b> We thank the commenter for supporting the addition of telehealth reporting for this measure.	
After consideration of public comments, we are finalizing the changes to measure Q386 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.80 Annual Hepatitis C Virus (HCV) Screening for Patients who are Active Injection Drug Users**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	387
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients, regardless of age, who are active injection drug users who received screening for HCV infection within the 12-month reporting period.
<b>Substantive Change:</b>	<b>Updated denominator:</b> Added telehealth as eligible encounter.
<b>Steward:</b>	American Gastroenterological Association
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.
<b>Comment:</b> Several commenters supported the addition of telehealth reporting for measure Q387.	
<b>Response:</b> We thank the commenters for supporting the addition of telehealth reporting for this measure.	
After consideration of public comments, we are finalizing the changes to measure Q387 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.81 Follow-Up After Hospitalization for Mental Illness (FUH)**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0576 / N/A
<b>Quality#:</b>	391
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	The percentage of discharges for patients 6 years of age and older who were hospitalized for treatment of selected mental illness or intentional self-harm diagnoses and who had a follow-up visit with a mental health practitioner. Two rates are submitted: <ul style="list-style-type: none"> <li>• The percentage of discharges for which the patient received follow-up within 30 days after discharge.</li> <li>• The percentage of discharges for which the patient received follow-up within 7 days after discharge.</li> </ul>
<b>Substantive Change:</b>	<b>Updated numerator options:</b> Revised: Submission Criteria 1: <b>Performance Met:</b> Patient received follow-up within 30 days after discharge.
<b>Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the performance met numerator option to align with the numerator statement, which prohibits the use of visits that occur on the date of discharge, as this would not meet the intent of the measure.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q391 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.82 Immunizations for Adolescents**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	1407 / N/A
<b>Quality#:</b>	394
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Community/Population Health
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	The percentage of adolescents 13 years of age who had the recommended immunizations by their 13th birthday.
<b>Substantive Change:</b>	<b>The description is revised to read:</b> The percentage of adolescents 13 years of age who had one dose of meningococcal vaccine (serogroups A, C, W, Y), one tetanus, diphtheria toxoids and acellular pertussis (Tdap) vaccine, and have completed the human papillomavirus (HPV) vaccine series by their 13th birthday.
<b>Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to revise the description to detail the components within the measure. This allows for a more clear understanding of the intent of the measure.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q394 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.83 Lung Cancer Reporting (Biopsy/Cytology Specimens)**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	395
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Communication and Care Coordination
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Pathology reports based on biopsy and/or cytology specimens with a diagnosis of primary non-small cell lung cancer classified into specific histologic type or classified as non-small cell lung cancer not otherwise specified (NSCLC-NOS) with an explanation included in the pathology report.
<b>Substantive Change:</b>	<b>The numerator is revised to read: For all collection types:</b> Biopsy and cytology specimen reports with a diagnosis of primary non-small cell lung cancer classified into specific histologic type (including but not limited to squamous cell carcinoma, adenocarcinoma, large cell carcinoma) OR classified as NSCLC-NOS with an explanation included in the pathology report.
<b>Steward:</b>	College of American Pathologists
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the numerator statement to more clearly detail the acceptable histologic types. This revision, provided based on stakeholder feedback, includes keywords that are can be used in clinical practice.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q395 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.84 One-Time Screening for Hepatitis C Virus (HCV) for Patients at Risk**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	400
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older with one or more of the following: a history of injection drug use, receipt of a blood transfusion prior to 1992, receiving maintenance hemodialysis, OR birthdate in the years 1945-1965 who received one-time screening for hepatitis C virus (HCV) infection.
<b>Substantive Change:</b>	<b>Updated denominator:</b> Added telehealth as eligible encounter.
<b>Steward:</b>	American Gastroenterological Association
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.
<b>Comment:</b> Several commenter supported the addition of telehealth reporting for measure Q400.	
<b>Response:</b> We thank the commenters for supporting the addition of telehealth reporting for this measure.	
After consideration of public comments, we are finalizing the changes to measure Q400 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.

**D.85 Appropriate Follow-up Imaging for Incidental Abdominal Lesions**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	405
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	<p>Percentage of final reports for imaging studies for patients aged 18 years and older with one or more of the following noted incidentally with a specific recommendation for no follow-up imaging recommended based on radiological findings:</p> <ul style="list-style-type: none"> <li>• Cystic renal lesion that is simple appearing* (Bosniak I or II)</li> <li>• Adrenal lesion less than or equal to 1.0 cm</li> <li>• Adrenal lesion greater than 1.0 cm but less than or equal to 4.0 cm classified as likely benign by unenhanced CT or washout protocol CT, or MRI with in- and opposed-phase sequences or other equivalent institutional imaging protocols</li> </ul>
<b>Substantive Change:</b>	<p><b>The description is revised to read:</b> Percentage of final reports for imaging studies for patients aged 18 years and older with one or more of the following noted incidentally with a specific recommendation for no follow-up imaging recommended based on radiological findings:</p> <ul style="list-style-type: none"> <li>• Cystic renal lesion that is simple appearing* (Bosniak I or II)</li> <li>• Adrenal lesion less than or equal to 1.0 cm</li> <li>• Adrenal lesion greater than 1.0 cm but less than or equal to 4.0 cm classified as likely benign or diagnostic benign by unenhanced CT or washout protocol CT, or MRI with in- and opposed-phase sequences or other equivalent institutional imaging protocols</li> </ul> <p><b>The denominator is revised to read: For all collection types:</b> All final reports for imaging studies for patients aged 18 years and older with one or more of the following incidentally noted:</p> <ul style="list-style-type: none"> <li>• Cystic renal lesion that is simple appearing (Bosniak I or II)</li> <li>or</li> <li>• Adrenal lesion less than or equal to 1.0 cm</li> <li>or</li> <li>• Adrenal lesion greater than 1.0 cm but less than or equal to 4.0 cm classified as likely benign or diagnostic benign by unenhanced CT or washout protocol CT, or MRI with in- and opposed-phase sequences or other equivalent institutional imaging protocols</li> </ul> <p><b>Updated denominator criteria: For all collection types:</b> Removed diagnostic ultrasound procedures.</p> <p><b>The denominator note is revised to read: For all collection types:</b> The intent of this measure is to ensure patients with incidental findings that are highly likely to be benign do not receive follow up imaging routinely. * “Simple-appearing criteria”:</p> <ul style="list-style-type: none"> <li>• § Incidental renal mass on non-contrast enhanced abdominal CT that does not contain fat, is homogenous in appearance, -10-20 HU or ≥70 HU. (ACR, 2017)</li> <li>• § Incidental renal mass on contrast-enhanced abdominal CT that does not contain fat, is homogenous in appearance, -10-20 HU. (ACR, 2017)</li> </ul> <p>When reporting this measure, masses and lesions that do not meet all the criteria for “no further work-up” as provided in Management of the Incidental Renal Mass on CT: A White Paper of the ACR Incidental Findings Committee or the Management of the Incidental Adrenal Mass on CT: A White Paper of the ACR Incidental Findings Committee should not be considered in the context or intent of this measure. However, generally accepted radiology practices should be followed for communication and management of any characteristically benign findings. A measure performance goal of 100% should not substitute for clinical judgment in individual cases.</p> <p><b>Updated numerator note: For the Medicare Part B Claims Measure Specifications collection type:</b> Removed numerator note.</p> <p><b>Updated numerator options: For all collection types:</b> Revised:</p> <p><b>Performance Not Met:</b> Final reports for imaging studies with follow-up imaging recommended, or final reports that do not include a specific recommendation of no follow-up.</p>
<b>Steward:</b>	American College of Radiology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to update the numerator options to add clarifying language that accounts for those instances where no follow-up recommendation is given within the final reports for imaging studies. The intent of the measure includes the documentation of follow-up recommendations within the final report. Additionally, we proposed to remove diagnostic ultrasound procedures from the denominator eligible criteria as it does not align with the intent of the measure.</p> <p>We proposed a substantive change to the denominator note; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state:</p> <p>The intent of this measure is to ensure patients with incidental findings that are highly likely to be benign do not receive follow up imaging routinely. * “Simple-appearing criteria”:</p> <ul style="list-style-type: none"> <li>• § Incidental renal mass on non-contrast enhanced abdominal CT that does not contain fat, is homogenous in appearance, -10-20 HU or ≥70 HU. (ACR, 2017)</li> <li>• § Incidental renal mass on contrast-enhanced abdominal CT that does not contain fat, is homogenous in appearance, -10-20 HU. (ACR, 2017)</li> </ul> <p>When reporting this measure, masses and lesions that do not meet all the criteria for “no further work-up” as provided in Management of the Incidental Renal Mass on CT: A White Paper of the ACR Incidental Findings Committee or the Management of the Incidental Adrenal Mass on CT: A White Paper of the ACR</p>

Category	Description
	<p>Incidental Findings Committee should not be considered in the context or intent of this measure. However, generally accepted radiology practices should be followed with respect to communication and management of any characteristically benign findings. A measure performance goal of 100% should not substitute for clinical judgment in individual cases.</p> <p>This additional refinement of changing ‘for communication’ to ‘with respect to communication’ does not affect the intent of the proposed substantive change.</p> <p><b>Comment:</b> One commenter supported the changes to measure Q405 as they better fit the intent of these measures and will lessen clinical burden to some extent.</p> <p><b>Response:</b> We thank the commenter for supporting the changes to this measure.</p> <p><b>Comment:</b> One commenter believed that the changes to measure Q405 should be more comprehensive. The measure focuses exclusively on reporting “no-follow up recommended” for incidental and likely benign renal and adrenal lesions. While the commenter understood the intention to address inappropriate use of imaging, the measure neglects appropriate usage. It should also support evidence-based recommendations for follow-up of worrisome lesions. A more balanced approach would indicate performance met when specific evidence-based guidance is used for necessary follow-up and when no follow-up is necessary, as included in the measure steward’s two white papers referenced in the measure.</p> <p><b>Response:</b> We encourage the commenter to reach out the measure steward to discuss possible revisions for consideration for future implementation.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q405 as indicated for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

**D.86 Psoriasis: Clinical Response to Systemic Medications**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	410
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Person and Caregiver-Centered Experience and Outcomes
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of psoriasis vulgaris patients receiving systemic medication who meet minimal physician-or patient- reported disease activity levels. It is implied that establishment and maintenance of an established minimum level of disease control as measured by physician-and/or patient-reported outcomes will increase patient satisfaction with and adherence to treatment.
<b>Substantive Change:</b>	<b>The instructions are revised to read:</b> This measure is to be submitted a minimum of once per performance period for all patients during the performance period. The most recent denominator eligible encounter in which the numerator action was performed, should be used.  <b>Updated denominator:</b> Added telehealth as eligible encounter.
<b>Steward:</b>	American Academy of Dermatology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Outcome
<b>Rationale:</b>	We proposed to revise the instructions language to clarify what denominator eligible encounter should be used when assessing the quality action.  We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.
<b>Comment:</b> One commenter supported the addition of telehealth reporting for measure Q410.	
<b>Response:</b> We thank the commenter for supporting the addition of telehealth reporting for this measure.	
After consideration of public comments, we are finalizing the changes to measure Q410 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

**D.87 Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	415
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Efficiency and Cost Reduction
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of emergency department visits for patients aged 18 years and older who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care provider who have an indication for a head CT.
<b>Substantive Change:</b>	<p><b>Updated denominator criteria:</b> Diagnosis for minor blunt head trauma - removed coding for fracture of skull and facial bones and superficial injury of neck.</p> <p><b>The definition is revised to read:</b>                      Indications for a head CT in patients presenting to the emergency department for minor blunt head trauma:                      Patients with no loss of consciousness (LOC) AND no post-traumatic amnesia AND any one of the following:</p> <ul style="list-style-type: none"> <li>• GCS score less than 15</li> <li>• Severe headache</li> <li>• Vomiting</li> <li>• Age 65 years and older</li> <li>• Physical signs of a basilar skull fracture (signs include haemotympanum, "raccoon" eyes, cerebrospinal fluid leakage from the ear or nose, Battle's sign)</li> <li>• Focal neurological deficit</li> <li>• Coagulopathy</li> <li>• Thrombocytopenia</li> <li>• Currently taking any of the following anticoagulant medications**: apixaban, argatroban, betrixaban, bivalirudin, dabigatran, dalteparin, desirudin, edoxaban, enoxaparin, fondaparinux, heparin, rivaroxaban, warfarin</li> <li>• Dangerous mechanism of injury (i.e., ejection from a motor vehicle, a pedestrian struck, and a fall from a height of more than 3 feet or 5 stairs)</li> </ul> <p>OR</p> <p>Patients with either LOC OR Posttraumatic amnesia AND any one of the following:</p> <ul style="list-style-type: none"> <li>• GCS score less than 15</li> <li>• Headache</li> <li>• Age 60 years and older, and less than 65 years</li> <li>• Drug/alcohol intoxication</li> <li>• Short-term memory deficits</li> <li>• Evidence of trauma above the clavicles (physical location, any trauma to the head or neck [i.e., laceration, abrasion, bruising, ecchymosis, hematoma, swelling, fracture])</li> <li>• Posttraumatic seizure.</li> </ul>
<b>Steward:</b>	American College of Emergency Physicians
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Efficiency
<b>Rationale:</b>	We proposed to update the coding for ‘Diagnosis of minor blunt head trauma’ base on the measure steward’s clinical expert input as closed fractures of the skull and facial bones, as well as concepts that relate to neck of below the head anatomical locations. The measures intent is to capture those patients with minor blunt head trauma and the fractures captured above are not clinically appropriate for the denominator criteria and should not be assessed for the purposes of this measure. We proposed revisions to the definition language to improve clarity regarding indications for a head CT for the purposes of this measure. We agreed that these revisions better define how to determine appropriate indication(s) for a head CT.
<b>Comment:</b>	One commenter supported the substantive changes to measure Q415, which will improve clarity regarding indications for a head CT for the purposes of this measure.
<b>Response:</b>	We thank the commenter for supporting the changes to measure Q415.
	After consideration of publication comments, we are finalizing the changes to measure Q415 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.88 Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 2 Through 17 Years**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	416
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Efficiency and Cost Reduction
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of emergency department visits for patients aged 2 through 17 years who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care provider who are classified as low risk according to the Pediatric Emergency Care Applied Research Network (PECARN) prediction rules for traumatic brain injury.
<b>Substantive Change:</b>	<p><b>Updated denominator criteria:</b> Diagnosis for minor blunt head trauma - removed coding for fracture of skull and facial bones and superficial injury of neck.</p> <p><b>The numerator definition is revised to read: For all collection types:</b>  Low Risk for Traumatic Brain Injury according to PECARN prediction rules –  Patients can be classified as low risk if ALL of the following are met:</p> <ul style="list-style-type: none"> <li>• No signs of altered mental status (e.g., agitation, somnolence, repetitive questioning, slow response to verbal communication)</li> <li>OR no GCS &lt; 15</li> <li>• No signs of basilar skull fracture (signs include haemotympanum, “raccoon” eyes, cerebrospinal fluid leakage from the ear or nose, Battle’s sign)</li> <li>• No loss of consciousness</li> <li>• No vomiting</li> <li>• No severe mechanism of injury (i.e., motor vehicle crash with patient ejection, death of another passenger, or rollover; pedestrian or bicyclist without helmet struck by a motorized vehicle; falls of more than 5 feet; or head struck by a high-impact object)</li> <li>• No severe headache.</li> </ul>
<b>Steward:</b>	American College of Emergency Physicians
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Efficiency
<b>Rationale:</b>	We proposed to update the coding for ‘Diagnosis of minor blunt head trauma’ base on the measure steward’s clinical expert input as closed fractures of the skull and facial bones, as well as concepts that relate to neck of below the head anatomical locations. The measures intent is to capture those patients with minor blunt head trauma and the fractures captured above are not clinically appropriate for the denominator criteria and should not be assessed for the purposes of this measure. We proposed revisions to the definition language to improve clarity regarding low risk for traumatic brain injury (TBI) for the purposes of this measure. We agreed that these revisions better define how to appropriately determine whether the patient is low risk for traumatic brain injury or not.
<b>Comment:</b>	One commenter supported the substantive changes to measure Q416, which will improve clarity regarding indications for a head CT for the purposes of this measure.
<b>Response:</b>	We thank the commenter for supporting the changes to measure Q416.
	After consideration of public comments, we are finalizing the changes to measure Q416 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.89 Osteoporosis Management in Women Who Had a Fracture**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0053 / N/A
<b>Quality#:</b>	418
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	The percentage of women age 50-85 who suffered a fracture in the six months prior to the performance period through June 30 of the performance period and who either had a bone mineral density test or received a prescription for a drug to treat osteoporosis in the six months after the fracture.
<b>Substantive Change:</b>	<p><b>Updated denominator criteria: For all collection types:</b> Option 1: Added denominator eligible patient encounters including discharge, outpatient observation, outpatient consultation, emergency department, home services, preventive medicine and counseling, work related/medical disability, care planning, and annual well check.</p> <p><b>Updated denominator exclusions: For all collection type:</b> Option 1 and Option 2: Revised:                      1. Patients age 66 or older in Institutional Special Needs Plans (SNP) or residing in long-term care with POS code, 32, 33, 34, 54, or 56 for more than 90 consecutive days during 6 months prior to the measurement period through December 31 of the measurement period.                      2. Patient 66 - 80 years of age and had at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period.                      3. Patients 66 - 80 years of age and had at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period.</p> <p>Added:                      1. Patients 81 years of age and older with at least one claim/encounter for frailty during 6 months prior to the measurement period through December 31 of the measurement period.</p> <p><b>Updated denominator exclusion: For all collection types:</b> For Option 1 and Option 2: Added coding to identify patients with advanced illness and frailty</p> <p><b>Updated definition: For all collection types:</b> Revised: Pharmacologic Therapy – U.S. Food and Drug Administration approved pharmacologic options for osteoporosis prevention and/or treatment of postmenopausal osteoporosis include: bisphosphonates, alendronate, alendronate-cholecalciferol, ibandronate, risedronate, zoledronic acid, teriparatide, denosumab, abaloparatide, romosozumab, and raloxifine.</p>
<b>Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to expand the eligible encounter coding for Option 1 to include all relevant encounters and create a more complete eligible patient population.</p> <p>We proposed that the denominator exclusion language and logic be updated in all collection types to clarify that, for the measure, long-term care will be defined as patients staying 90 consecutive days at the long-term care facility versus any 90 days within the performance period. A denominator exclusion was added to remove patient 81 years of age and older with a frailty encounter during the measurement period as patients within this age stratification are more appropriately assessed less stringently when determine if they should be excluded from the eligible patient population. Additionally, we proposed adding applicable coding to better define the advanced illness and frailty patient population for the purposes of this measure.</p> <p>We proposed to update the definition for pharmacologic therapy to align with the current U.S. Food and Drug Administration approved pharmacologic options for osteoporosis prevention and/or treatment of postmenopausal osteoporosis.</p>
<p>We proposed a substantive change to the denominator exclusions; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state:</p> <p><b>Updated denominator exclusions: For all collection type:</b> Option 1 and Option 2: Revised:</p> <ol style="list-style-type: none"> <li>1. Patients age 66 or older in Institutional Special Needs Plans (SNP) or residing in long-term care with POS code, 32, 33, 34, 54, or 56 for more than 90 consecutive days during the six months prior to the measurement period through December 31 of the measurement period</li> <li>2. Patients 66 - 80 years of age with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period</li> <li>3. Patients 66 - 80 years of age with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period</li> </ol> <p>Added:</p> <ol style="list-style-type: none"> <li>1. Patients 81 years of age and older with at least one claim/encounter for frailty during the six months prior to the measurement period through December 31 of the measurement period</li> </ol> <p>This additional refinement does not affect the intent of the proposed substantive change.</p> <p>We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q418 as indicated for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

**D.90 Overuse of Imaging for the Evaluation of Primary Headache**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	419
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Efficiency and Cost Reduction
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients for whom imaging of the head (CT or MRI) is obtained for the evaluation of primary headache when clinical indications are not present.
<b>Substantive Change:</b>	<p><b>Modified collection type:</b> MIPS CQMs Specifications</p> <p><b>Updated denominator criteria:</b> Removed inpatient setting. Removed “Patients with no clinical indications for imaging of the head”. Added telehealth as eligible encounter.</p> <p><b>Updated denominator instructions:</b> Removed denominator instructions.</p> <p><b>Updated denominator exclusion:</b> Added: Patients with clinical indications for imaging of the head</p> <ul style="list-style-type: none"> <li>• Head trauma</li> <li>• New or change in headache above 50 years of age</li> <li>• Abnormal neurologic exam</li> <li>• Headache radiating to the neck</li> <li>• Positional headaches</li> <li>• Temporal headaches in patients over 55 years of age</li> <li>• New onset headache in pre-school children or younger (&lt;6 years of age)</li> <li>• New onset headache in pediatric patients with disabilities for which headache is a concern as inferred from behavior</li> <li>• Occipital headache in children</li> <li>• Thunderclap headache</li> <li>• Trigeminal pain</li> <li>• Persistent headaches</li> </ul> <p><b>Updated denominator exception:</b> Revised: Imaging needed as part of a clinical trial; or other clinician ordered the study.</p>
<b>Steward:</b>	American Academy of Neurology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to remove the Medicare Part B Claims Measure Specifications collection type. The limited adoption of the quality measure for this collection type does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement.</p> <p>We proposed to update the denominator criteria to remove the inpatient setting as this measure is appropriate for the outpatient setting only. We proposed to remove the denominator criteria for patients with no clinical indications for head imaging and replace it with a denominator exclusion that clarifies patients with clinical indications for whom imaging of the head would be clinically relevant and warranted. The denominator instructions were removed as they were duplicative of the added denominator exclusion. Additionally, we proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured. The denominator exception is being updated to delete outdated language and no longer allows for system reason(s).</p>
<p><b>Comment:</b> One commenter requested the removal of Medicare Part B Claims Measure Specifications for measure Q419 through the measure review process. The commenter noted that these changes were not reflected in the 2021 PFS proposed rule and the measure specifications should be removed, as the measures steward is no longer maintaining these specifications. A second commenter opposed the removal of the Claims collection type because it would adversely impact ophthalmologists, particularly those in small and rural practices who must rely on the claims reporting collection type because they cannot afford to adopt CEHRT.</p> <p><b>Response:</b> We refer the commenter to the substantive change proposed to include a modification to the collection type resulting in the removal of the Medicare Part B Claims Measure Specification. We thank the commenter for their support in the removal of the Medicare Part B Claims Measure Specification collection type.</p> <p><b>Comment:</b> One commenter supported and one commenter did not support the addition of telehealth reporting for measure Q419.</p> <p><b>Response:</b> We believe that including telehealth encounters as denominator eligible as this will lead to a more complete patient population to ensure appropriate use of imaging for a diagnosis of primary headache. We encourage the commenter who did not support adding telehealth to this measure to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q419 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

**D.91 Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	2152 / N/A
<b>Quality#:</b>	431
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Community/Population Health
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 24 months AND who received brief counseling if identified as an unhealthy alcohol user.
<b>Substantive Change:</b>	<p><b>The description is revised to read:</b> Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as an unhealthy alcohol user.</p> <p><b>Updated instructions:</b>  Revised:  For the purposes of the measure, the most recent denominator eligible encounter should be used to determine if the numerator action for the submission criteria was performed within the 12-month look back period.  Added:  This measure will be calculated with 3 performance rates:  1) Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months  2) Percentage of patients aged 18 years and older who were identified as unhealthy alcohol users who received brief counseling  3) Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as unhealthy alcohol users  The denominator of submission criteria 2 is a subset of the resulting numerator for submission criteria 1, as submission criteria 2 is limited to assessing if patients identified as unhealthy alcohol users received brief counseling. For all patients, submission criteria 1 and 3 are applicable, but submission criteria 2 will only be applicable for those patients who are identified as unhealthy alcohol users. Therefore, data for every patient that meets the age and encounter requirements will only be submitted for submission criteria 1 and 3, whereas data submitted for submission criteria 2 will be for a subset of patients who meet the age and encounter requirements, as the denominator has been further limited to those who were identified as unhealthy alcohol users.</p> <p><b>THERE ARE THREE SUBMISSION CRITERIA FOR THIS MEASURE:</b>  1) All patients who were screened for unhealthy alcohol use using a systematic screening method  AND  2) All patients who were identified as unhealthy alcohol users who received brief counseling  AND  3) All patients who were screened for unhealthy alcohol use using a systematic screening method and, if identified as unhealthy alcohol users received brief counseling, or were not identified as unhealthy alcohol users</p> <p>This measure contains three submission criteria which aim to identify patients who were screened for unhealthy alcohol use using a systematic screening method (submission criteria 1), patients who were identified as unhealthy alcohol users and who received brief counseling (submission criteria 2), and a comprehensive look at the overall performance on unhealthy alcohol use screening and brief counseling (submission criteria 3). By separating this measure into various submission criteria, the MIPS eligible professional or MIPS eligible clinician will be able to better ascertain where gaps in performance exist, and identify opportunities for improvement. The overall rate (submission criteria 3) should be utilized to compare performance to published versions of this measure prior to the 2021 performance year, when the measure had a single performance rate. For accountability reporting in the CMS MIPS program, the rate for submission criteria 2 is used for performance.</p> <p><b>The denominator is revised to read:</b>  Submission Criteria 1: All patients aged 18 years and older seen for at least two visits or at least one preventive visit during the measurement period.  Submission Criteria 2: All patients aged 18 years and older seen for at least two visits or at least one preventive visit during the measurement period who were screened for unhealthy alcohol use and identified as an unhealthy alcohol user.  Submission Criteria 3: All patients aged 18 years and older seen for at least two visits or at least one preventive visit during the measurement period.</p> <p><b>Updated denominator:</b> Added telehealth as eligible encounter.</p> <p><b>The numerator is revised to read:</b>  Submission Criteria 1: Patients who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months.  Submission Criteria 2: Patients who received brief counseling.  Submission Criteria 3: Patients who were screened for unhealthy alcohol use using a systematic screening method at least once within 12 months AND who received brief counseling if identified as an unhealthy alcohol user.</p> <p><b>The numerator definition is revised to read:</b> Submission Criteria 1:  Systematic screening method – For purposes of this measure, one of the following systematic methods to assess unhealthy alcohol use must be utilized. Systematic screening methods and thresholds for defining unhealthy alcohol use include:  <ul style="list-style-type: none"> <li>• AUDIT Screening Instrument (score ≥ 4)</li> <li>• AUDIT-C Screening Instrument (score ≥ 4 for men; score ≥ 3 for women)</li> </ul> </p>

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

Category	Description
	<p>• Single Question Screening - How many times in the past year have you had 5 (for men) or 4 (for women and all adults older than 65 years) or more drinks in a day? (response ≥ 1). Submission Criteria 2 and 3: Brief counseling – Brief counseling for unhealthy alcohol use refers to one or more counseling sessions, a minimum of 5-15 minutes, which may include: feedback on alcohol use and harms; identification of high risk situations for drinking and coping strategies; increased motivation and the development of a personal plan to reduce drinking.</p> <p><b>Updated numerator note:</b> Submission Criteria 1: Added: To satisfy the intent of this measure, a patient must have at least one screening for unhealthy alcohol use during the 12-month period. If a patient has multiple screenings for unhealthy alcohol use during the 12-month period, only the most recent screening, which has a documented status of unhealthy alcohol user or unhealthy alcohol non-user, will be used to satisfy the measure requirements. Submission Criteria 2: Added: In the event that a patient is screened for unhealthy alcohol use and identified as an unhealthy user but did not receive brief alcohol cessation counseling submit GXXXX. Denominator Exception(s) are determined on the date of the most recent denominator eligible encounter for all submission criteria. Submission Criteria 3: Added: To satisfy the intent of this measure, a patient must have at least one unhealthy alcohol use screening during the 12-month period. If a patient has multiple unhealthy alcohol use screenings during the 12-month period, only the most recent screening, which has a documented status of unhealthy alcohol user or unhealthy alcohol non-user, will be used to satisfy the measure requirements. In the event that a patient is screened for unhealthy alcohol use and identified as an unhealthy user but did not receive brief alcohol cessation counseling submit G9624. Denominator Exception(s) are determined on the date of the most recent denominator eligible encounter for all submission criteria.</p> <p><b>Updated numerator options:</b> <b>Submission Criteria 1:</b> Revised: <b>Performance Met:</b> Patient identified as an unhealthy alcohol user when screened for unhealthy alcohol use using a systematic screening method. <b>Performance Not Met:</b> Patient not screened for unhealthy alcohol use using a systematic screening method, reason not given. <b>Submission Criteria 2:</b> Added: <b>Performance Met:</b> Patient identified as an unhealthy alcohol user received brief counseling. <b>Denominator Exception:</b> Documentation of medical reason(s) for not providing brief counseling (e.g., limited life expectancy, other medical reasons). <b>Performance Not Met:</b> Patient did not receive brief counseling if identified as an unhealthy alcohol user, reason not given. <b>Submission Criteria 3:</b> <b>Performance Met:</b> Patient identified as an unhealthy alcohol user when screened for unhealthy alcohol use using a systematic screening method and received brief counseling. <b>Performance Met:</b> Patient not identified as an unhealthy alcohol user when screened for unhealthy alcohol use using a systematic screening method. <b>Denominator Exception:</b> Documentation of medical reason(s) for not screening for unhealthy alcohol use (e.g., limited life expectancy, other medical reasons). <b>Denominator Exception:</b> Documentation of medical reason(s) for not providing brief counseling if identified as an unhealthy alcohol user (e.g., limited life expectancy, other medical reasons). <b>Performance Not Met:</b> Patient not screened for unhealthy alcohol use using a systematic screening method OR patient did not receive brief counseling if identified as an unhealthy alcohol user, reason not given.</p> <p><b>Updated performance rate calculation:</b> Revised into three submission criteria. Submission Criteria 2 will be used for benchmarking purposes.</p>
<b>Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to update the measure overall by splitting the measure into separate populations for three submission criteria. This will allow MIPS eligible clinicians to more readily find where the gaps in performance lie, allowing them to be better informed and able to adjust to improve quality care and patient outcomes. We proposed to revise the measure to shorten the look back period to 12 months and require that unhealthy alcohol screening who received brief counseling, if patient screened positive, occur every 12 months. The revision is based upon stakeholder feedback and input from the eCQM Clinical Review Process (CRP) and the measure steward’s technical expert panel (TEP) and we agreed that it is important to do this annually excessive alcohol use is one of the most common causes of premature mortality in the United States (<a href="https://www.uspreventiveservicestaskforce.org/Page/Document/RecommendationStatementFinal/unhealthy-alcohol-use-in-adolescents-and-adults-screening-and-behavioral-counseling-interventions">https://www.uspreventiveservicestaskforce.org/Page/Document/RecommendationStatementFinal/unhealthy-alcohol-use-in-adolescents-and-adults-screening-and-behavioral-counseling-interventions</a>). The numerator definition for Systematic screening method has been revised to align with current recommendations for the AUDIT C and the Single Questions Screening threshold.</p> <p>We proposed to add telehealth encounters as denominator eligible as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p>

**D.92 Statin Therapy for the Prevention and Treatment of Cardiovascular Disease**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	438
<b>CMS eCQM ID:</b>	CMS347v4
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period: <ul style="list-style-type: none"> <li>• Adults aged ≥ 21 years who were previously diagnosed with or currently have an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD); OR</li> <li>• Adults aged ≥ 21 years who have ever had a fasting or direct low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial or pure hypercholesterolemia; OR</li> <li>• Adults aged 40-75 years with a diagnosis of diabetes with a fasting or direct LDL-C level of 70-189 mg/dL.</li> </ul>
<b>Substantive Change:</b>	<p><b>Modified collection type:</b> eCQM Specifications, MIPS CQMs Specifications</p> <p><b>Updated denominator logic: For the eCQM Specifications collection type:</b> Added “CABG, PCI Procedure” 2.16.840.1.113762.1.4.1138.566 value set.</p> <p><b>Updated denominator exclusion logic: For the eCQM Specifications collection type:</b> Added Hospice Care value sets.</p> <p><b>The numerator definition is revised to read: For the MIPS CQMs Specifications collection type:</b>                      Statin therapy - Administration of one or more of a group of medications that are used to lower plasma lipoprotein levels in the treatment of hyperlipoproteinemia.                      Table 1 - Statin Medication Therapy List (NOTE: List does NOT include dosage):                      Atorvastatin, Fluvastatin, Lovastatin (Mevinolin), Pitavastatin, Pravastatin Sodium, Rosuvastatin Calcium, Simvastatin, Amlodipine Besylate/Atorvastatin, Ezetimibe/Simvastatin</p> <p><b>Updated denominator note: For the MIPS CQMs Specifications collection type:</b> Revised: Denominator Exclusions should be active at any time during the measurement period.</p> <p><b>Updated denominator: For the MIPS CQMs Specifications collection type:</b> Added telehealth as eligible encounters for all submission criteria.</p>
<b>Steward:</b>	Centers for Medicare & Medicaid Services
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to add a value set to the eCQM Specifications collection type denominator to allow for the use of CPT and HCPCS codes for reporting patients who have had a CABG or PCI for inclusion within the denominator. This will improve data capture to ensure a more complete patient population. Additionally, a Hospice Care value set was added to align with the measure intent to exclude both palliative care and hospice patients.</p> <p>We proposed to add telehealth encounters as denominator eligible for the MIPS CQMs Specifications collection type as the telehealth setting is directly applicable to this measure and these patients should be included in the denominator to allow for numerator compliance to be measured.</p> <p>We proposed to add the numerator definition for the MIPS CQMs Specifications collection type to include a table of medications within this section and not in the clinical recommendations statement to ensure MIPS eligible clinicians are following these recommendations based on the clinical guidelines. Additionally, we proposed to update the denominator note to add clarity regarding when the denominator exclusion would be assessed within the medical record for the purposes of reporting this measure.</p> <p>We proposed to remove the CMS Web Interface Measure Specifications collection type. This collection type was proposed to be sunset for the purposes of MIPS starting with the 2021 performance year. We have determined it is not fiscally viable, feasible, or sustainable for MIPS to continue this collection type/submission type due to an 80 percent reduction and a continued decrease in interest of groups and virtual groups seeking to report quality data on CMS Web Interface measures. For further rationale, please see section IV.A.3.c.(1)(c) of this final rule.</p>
<p><b>Comment:</b> Several commenters supported the addition of telehealth reporting for measure Q438.</p> <p><b>Response:</b> We thank the commenters for supporting the addition of telehealth reporting for this measure.</p> <p><b>Comment:</b> One commenter was not opposed to CMS being more prescriptive with the qualifying medications as long as frequent updates are made to the acceptable medications list.</p> <p><b>Response:</b> We thank the commenter for supporting the substantive change to the medication list for measure Q438.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q438 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years with the exception of the CMS Web Interface Specifications collection type. At § 414.1305, we proposed to modify the definition of the terms collection type and submission type by removing the CMS Web Interface Specifications as an available option starting with the 2023 payment year (85 FR 50290); however, the CMS Web Interface Measure Specifications collection type will be an available option for an extension of one additional year (2021 MIPS performance period/2023 MIPS payment year) and will be removed as a collection and submission type starting with the 2022 MIPS performance period/2024</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.93 Age Appropriate Screening Colonoscopy**

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	439
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The percentage of patients greater than 85 years of age who received a screening colonoscopy from January 1 to December 31.
Substantive Change:	<p><b>The description is revised to read:</b> The percentage of screening colonoscopies performed in patients greater than or equal to 86 years of age from January 1 to December 31.</p> <p><b>The denominator is revised to read:</b> All screening colonoscopy examinations performed on patients greater than or equal to 50 years of age during the encounter period.</p> <p><b>Updated denominator criteria:</b> Revised: All patients greater than or equal to 50 years of age on date of encounter receiving a colonoscopy for screening purposes only.</p> <p><b>The numerator is revised to read:</b> Screening colonoscopies performed in patients greater than or equal to 86 years of age.</p> <p><b>The numerator options are revised to read:</b></p> <p><b>Performance Met:</b> Patients greater than or equal to 86 years of age who underwent a screening colonoscopy and did not have a history of colorectal cancer or other valid medical reason for the colonoscopy, including: iron deficiency anemia, lower gastrointestinal bleeding, Crohn’s Disease (i.e., regional enteritis), familial adenomatous polyposis, Lynch Syndrome (i.e., hereditary non-polyposis colorectal cancer), inflammatory bowel disease, ulcerative colitis, abnormal finding of gastrointestinal tract, or changes in bowel habits.</p> <p><b>Denominator Exception:</b> Documentation of medical reason(s) for a colonoscopy performed on a patient greater than or equal to 86 years of age (e.g., iron deficiency anemia, lower gastrointestinal bleeding, Crohn’s Disease (i.e., regional enteritis), familial history of adenomatous polyposis, Lynch Syndrome (i.e., hereditary non-polyposis colorectal cancer), inflammatory bowel disease, ulcerative colitis, abnormal finding of gastrointestinal tract, or changes in bowel habits).</p> <p><b>Performance Not Met:</b> Patients greater than or equal to 86 years of age who received a colonoscopy for an assessment of signs/symptoms of GI tract illness, and/or because the patient meets high risk criteria, and/or to follow-up on previously diagnosed advanced lesions.</p> <p><b>Performance Not Met:</b> Patients between 50 and 85 years of age who received a screening colonoscopy during the performance period.</p>
Steward:	American Gastroenterological Association
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale:	<p>We proposed to update the denominator population to include all patients aged 50 and older to ensure a more complete patient population as the intent of the measure is to assess age appropriate screening colonoscopies, which include patients under the age of 86 years. The description, denominator, and denominator criteria have been updated to reflect these revisions. The numerator and numerator options have been revised to more clearly reflect the patient population and a performance not met numerator option was added to reflect the expanded denominator eligible patient population.</p> <p>In the event the proposed substantive change(s) were finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes.</p>
<p>We proposed a substantive change to the numerator options; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state:</p> <p><b>The numerator options are revised to read:</b></p> <p><b>Performance Met:</b> Patients greater than or equal to 86 years of age who underwent a screening colonoscopy and did not have a history of colorectal cancer or other valid medical reason for the colonoscopy, including: iron deficiency anemia, lower gastrointestinal bleeding, Crohn’s Disease (i.e., regional enteritis), familial adenomatous polyposis, Lynch Syndrome (i.e., hereditary non-polyposis colorectal cancer), inflammatory bowel disease, ulcerative colitis, abnormal finding of gastrointestinal tract, or changes in bowel habits.</p> <p><b>Performance Not Met:</b> Documentation of medical reason(s) for a colonoscopy performed on a patient greater than or equal to 86 years of age (e.g., iron deficiency anemia, lower gastrointestinal bleeding, Crohn’s Disease (i.e., regional enteritis), familial history of adenomatous polyposis, Lynch Syndrome (i.e., hereditary non-polyposis colorectal cancer), inflammatory bowel disease, ulcerative colitis, abnormal finding of gastrointestinal tract, or changes in bowel habits).</p> <p><b>Performance Not Met:</b> Patients greater than or equal to 86 years of age who received a colonoscopy for an assessment of signs/symptoms of GI tract illness, and/or because the patient meets high risk criteria, and/or to follow-up on previously diagnosed advanced lesions.</p> <p><b>Performance Not Met:</b> Patients between 50 and 85 years of age who received a screening colonoscopy during the performance period.</p> <p>This additional refinement of changing the Denominator Exception to a Performance Not Met does not affect the intent of the proposed substantive change. This revision aligns with the current measure specification and will not affect the final performance as this is an inverse measure. It is just a reclassification of the numerator option.</p> <p><b>Comment:</b> One commenter supported the changes to measure Q439.</p> <p><b>Response:</b> We thank the commenter for supporting the changes to this measure. After consideration of public comments, we are finalizing the changes to measure Q439 as indicated for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>

**D.94 Medication Management for People with Asthma**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	444
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Efficiency and Cost Reduction
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	The percentage of patients 5-64 years of age during the performance period who were identified as having persistent asthma and were dispensed appropriate medications that they remained on for at least 75% of their treatment period.
<b>Substantive Change:</b>	<b>Updated numerator:</b> Updated medication table to split medications by controller versus reliever and adding 'Medication List' and 'Route' column. Asthma Controller Medications: Dyphylline-guaifenesin, Omalizumab, Benralizumab, Mepolizumab, Reslizumab, Budesonide-formoterol, Fluticasone-salmeterol, Fluticasone-vilanterol, Formoterol-mometasone, Beclomethasone, Budesonide, Ciclesonide, Flunisolide, Fluticasone, Mometasone, Montelukast, Zafirlukast, Zileuton, Theophylline. Asthma Reliever Medications: Albuterol, Levalbuterol.
<b>Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to update the medications table to ensure the list includes current and appropriate medications for the purposes of meeting performance of this measure. The measure specification medication tables were reformatted for clarity and readability.
<b>Comment:</b> One commenter encouraged CMS to double check the list of medications for completeness for this measure.	
<b>Response:</b> We thank the commenter for their comment. This list has been reviewed for accuracy; however, we encourage the commenter to reach out to the measure steward regarding the medication list for potential revisions for possible inclusion in future years.	
After consideration of public comments, we are finalizing the changes to measure Q444 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

**D.95 Trastuzumab Received By Patients With AJCC Stage I (T1c) – III And HER2 Positive Breast Cancer Receiving Adjuvant Chemotherapy**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	1858 / N/A
<b>Quality#:</b>	450
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of female patients (aged 18 years and older) with AJCC stage I (T1c) – III, human epidermal growth factor receptor 2 (HER2) positive breast cancer receiving adjuvant chemotherapy who are also receiving Trastuzumab.
<b>Substantive Change:</b>	<p><b>The title is revised from ‘Trastuzumab received by patients with AJCC stage I (T1c) - III and HER2 positive breast cancer receiving adjuvant chemotherapy’ to:</b> Appropriate Treatment for Patients with Stage I (T1c) - III HER2 Positive Breast Cancer.</p> <p><b>The description is revised to read:</b> Percentage of female patients aged 18 to 70 with stage I (T1c) - III HER2 positive breast cancer for whom appropriate treatment is initiated.</p> <p><b>The denominator is revised to read:</b> All female breast cancer patients aged 18 to 70 with stage I (T1c) - III HER2 positive breast cancer.</p> <p><b>Updated denominator criteria:</b>                  Revised: Female patients age 18-70 years on date of encounter.                  Removed: Breast Adjuvant Chemotherapy administered.</p> <p><b>Updated denominator exclusions:</b> Removed:  <ul style="list-style-type: none"> <li>• Patient transferred to practice after initiation of chemotherapy.</li> <li>• Patient has metastatic disease at diagnosis.</li> </ul>                 Added:  <ul style="list-style-type: none"> <li>• Patients with pregnancy during adjuvant treatment course.</li> </ul> </p> <p><b>The numerator is revised to read:</b> Patients whose adjuvant treatment course includes both chemotherapy and HER2-targeted therapy.</p> <p><b>The numerator note is revised to read:</b> The quality action of this measure is the appropriateness of treatment rather than timeliness of treatment. The timing of administration of HER2-targeted therapies is expected to vary depending on the cytotoxic agents used. The numerator statement is intended to capture an adjuvant treatment course that includes both chemotherapy and HER2-targeted therapy, independent of possible administration sequences. Adjuvant chemotherapy is defined as a chemotherapy regimen initiated within 6 months of cancer diagnosis. An FDA-approved trastuzumab biosimilar is an appropriate substitute for trastuzumab.</p> <p><b>The numerator options are revised to read:</b>  <b>Performance Met:</b> Patient received adjuvant treatment course including both chemotherapy and HER2-targeted therapy.  <b>Denominator Exception:</b> Reason for not administering adjuvant treatment course including both chemotherapy and HER2-targeted therapy (e.g. poor performance status (ECOG 3-4; Karnofsky ≤50), cardiac contraindications, insufficient renal function, insufficient hepatic function, other active or secondary cancer diagnoses, other medical contraindications, patients who died during initial treatment course or transferred during or after initial treatment course).  <b>Performance Not Met:</b> Patient did not receive adjuvant treatment course including both chemotherapy and HER2-targeted therapy.</p>
<b>Steward:</b>	American Society of Clinical Oncology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	<p>We proposed to expand the scope and clinical focus of the measure to include all female patients age 18 – 70 years with stage I (T1c) - III HER2 positive breast cancer, allowing for assessment of chemotherapy within the numerator, necessitating the removal of the denominator criteria for chemotherapy. NCCN recommendations support the administration of chemotherapy and trastuzumab for this patient population.</p> <p>We proposed to remove the current denominator exclusions and add new denominator exclusions based upon feasibility testing which determined these histologies are rare enough and are unlikely to have HER2 positivity such that it is not necessary to specifically target for removal from the denominator population. We agreed that these exclusions are not appropriate for inclusion. The added denominator exclusions reflect the measure’s change in clinical scope and allows for removal of patients for whom treatment with chemotherapy and HER2-targeted therapy would not be appropriate.</p> <p>The measure steward’s technical expert panel acknowledged that patients who fail to receive timely treatment may also fail to receive appropriate treatment. Because the quality action of this measure is appropriateness rather than timeliness of treatment, a broader timeframe is utilized to capture patients who may be less likely to receive appropriate treatment, therefore, 6 months was chosen to define adjuvant chemotherapy. The inclusion of an FDA-approved trastuzumab biosimilar as substitute for trastuzumab is in accordance with updated NCCN breast cancer guidelines. We agreed with this revision to the numerator note as it clarifies the updated measure scope and aligns with current clinical guidelines.</p>

**D.96 RAS (KRAS and NRAS) Gene Mutation Testing Performed for Patients with Metastatic Colorectal Cancer who receive Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibody Therapy**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	1859 / N/A
<b>Quality#:</b>	451
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of adult patients (aged 18 or over) with metastatic colorectal cancer who receive anti-epidermal growth factor receptor monoclonal antibody therapy for whom RAS (KRAS and NRAS) gene mutation testing was performed.
<b>Substantive Change:</b>	<b>Updated denominator:</b> Added telehealth exclusion to patient encounter.
<b>Steward:</b>	American Society of Clinical Oncology
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add a telehealth exclusion to the patient encounter as telehealth encounters are not applicable to this measure and these patients should not be included in the denominator.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q451 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.

**D.100 Percentage of Patients Who Died from Cancer Admitted to Hospice for Less than 3 days (lower score – better)**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0216 / N/A
<b>Quality#:</b>	457
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients who died from cancer and admitted to hospice and spent less than 3 days there.
<b>Substantive Change:</b>	<b>Updated denominator:</b> Added telehealth exclusion to patient encounter.
<b>Steward:</b>	American Society of Clinical Oncology
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Outcome
<b>Rationale:</b>	We proposed to add a telehealth exclusion to the patient encounter as telehealth encounters are not applicable to this measure and these patients should not be included in the denominator.
<p><b>Comment:</b> One commenter was concerned about adding a telehealth exclusion to measure Q457 because CMS claimed that telehealth encounters were not applicable to this measure. The commenter disagreed with this statement and believed it would be appropriate to include telehealth encounters in this measure. This measure aims to identify patients who either did not have a hospice referral prior to death or received hospice care too late. Including telehealth encounters would help CMS to more comprehensively and accurately identify patients who were unable to benefit from hospice services.</p> <p><b>Response:</b> We thank the commenter for their comment. This measure currently requires two or more encounters at the reporting site and that the patient be enrolled in hospice as part of the denominator eligibility criteria. The inclusion of a telehealth modifier exclusion for the patient encounters aligns with the intent of the measure. To be eligible for this measure, the patient must already be enrolled in hospice. This measure assesses whether or not patients were enrolled in hospice in a timely manner in order to maximize benefits that may be attained from this service. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q457 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

**D.101 Back Pain After Lumbar Discectomy/Laminectomy**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	459
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Person and Caregiver-Centered Experience and Outcomes
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	For patients 18 years of age or older who had a lumbar discectomy/laminectomy procedure, back pain is rated by the patients as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain scale at three months (6 to 20 weeks) postoperatively.
<b>Substantive Change:</b>	<b>Updated denominator exclusion:</b> Revised: Patient had cancer, acute fracture or infection related to the lumbar spine OR patient had neuromuscular, idiopathic or congenital lumbar scoliosis.
<b>Steward:</b>	Minnesota Community Measurement
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Patient Reported Outcome
<b>Rationale:</b>	We proposed to add neuromuscular scoliosis to the denominator exclusion based upon feedback from clinicians following statewide implementation of the measure. We agreed that patients with this type of scoliosis should be removed to help create a more heterogeneous population, which reflects the original intent of this denominator exclusion.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q459 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.102 Back Pain After Lumbar Fusion**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	460
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Person and Caregiver-Centered Experience and Outcomes
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	For patients 18 years of age or older who had a lumbar fusion procedure, back pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain* scale at one year (9 to 15 months) postoperatively. * hereafter referred to as VAS Pain
<b>Substantive Change:</b>	<b>Updated denominator exclusion:</b> Revised: Patient had cancer, acute fracture or infection related to the lumbar spine OR patient had neuromuscular, idiopathic or congenital lumbar scoliosis.
<b>Steward:</b>	Minnesota Community Measurement
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Patient Reported Outcome
<b>Rationale:</b>	We proposed to add neuromuscular scoliosis to the denominator exclusion based upon feedback from clinicians following statewide implementation of the measure. We agreed that patients with this type of scoliosis should be removed to help create a more heterogeneous population, which reflects the original intent of this denominator exclusion.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q460 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.103 Leg Pain After Lumbar Discectomy/Laminectomy**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	461
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Person and Caregiver-Centered Experience and Outcomes
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	For patients 18 years of age or older who had a lumbar discectomy/laminectomy procedure, leg pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the VAS Pain scale at three months (6 to 20 weeks) postoperatively.
<b>Substantive Change:</b>	<b>Updated denominator exclusion:</b> Revised: Patient had cancer, acute fracture or infection related to the lumbar spine OR patient had neuromuscular, idiopathic or congenital lumbar scoliosis.
<b>Steward:</b>	Minnesota Community Measurement
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Patient Reported Outcome
<b>Rationale:</b>	We proposed to add neuromuscular scoliosis to the denominator exclusion based upon feedback from clinicians following statewide implementation of the measure. We agreed that patients with this type of scoliosis should be removed to help create a more heterogeneous population, which reflects the original intent of this denominator exclusion.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q461 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. **D.104 Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	462
<b>CMS eCQM ID:</b>	CMS645v4
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	eCQM Specifications
<b>Current Measure Description:</b>	Patients determined as having prostate cancer who are currently starting or undergoing androgen deprivation therapy (ADT), for an anticipated period of 12 months or greater and who receive an initial bone density evaluation. The bone density evaluation must be prior to the start of ADT or within 3 months of the start of ADT.
<b>Substantive Change:</b>	<b>Updated definition:</b> Added: First Androgen Deprivation Therapy - The First Androgen Deprivation Therapy (ADT) is measured as the first order or administration of ADT for an anticipated period of 12 months or greater to a patient with prostate cancer.
<b>Steward:</b>	Oregon Urology Institute
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add a definition for ‘First Androgen Deprivation Therapy’ to clarify the timing of the bone density evaluation necessary for numerator compliance.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q462 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.105 Otitis Media with Effusion: Systemic Antimicrobials - Avoidance of Inappropriate Use**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	0657 / N/A
<b>Quality#:</b>	464
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of patients aged 2 months through 12 years with a diagnosis of OME who were not prescribed systemic antimicrobials.
<b>Substantive Change:</b>	<b>Updated denominator:</b> Added telehealth exclusion to patient encounter.
<b>Steward:</b>	American Academy of Otolaryngology – Head and Neck Surgery Foundation
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to add a telehealth exclusion to the patient encounter as telehealth encounters are not applicable to this measure and these patients should not be included in the denominator.
<p><b>Comment:</b> One commenter supported the addition of telehealth reporting for measure Q464. The commenter noted that there is an error in the substantive change: “Updated denominator: Added telehealth exclusion to patient encounter.” The substantive change should instead read, “Updated denominator: Telehealth exclusion to patient encounter is removed” as telehealth encounters are applicable to this measure and these patients should not be excluded in the denominator.</p> <p><b>Response:</b> We agree that the measure specification currently excludes telehealth and the substantive change was to remove the telehealth exclusion as it would be appropriate to include these patients into the measure denominator eligible population.</p> <p>After consideration of public comments, we are finalizing the changes to measure Q464 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.106 Continuity of Pharmacotherapy for Opioid Use Disorder (OUD)**

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	468
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of adults aged 18 years and older with pharmacotherapy for opioid use disorder (OUD) who have at least 180 days of continuous treatment.
Substantive Change:	<p><b>Updated instructions:</b> Revised: This measure is to be submitted a minimum of once per performance period for all adults aged 18 years and older with pharmacotherapy for OUD seen during the measurement period that meet additional denominator criteria described below.</p> <p><b>The denominator is revised to read:</b> Adults aged 18 years and older who had a qualifying encounter during the performance year, and a diagnosis of OUD and pharmacotherapy for OUD during the denominator identification period. Eligibility to submit results for a patient requires a qualifying encounter in the performance year, i.e., between January 1, 2021, and December 31, 2021. Solely administering or prescribing OUD medication does not convey eligibility to submit. If a patient has a qualifying encounter within the performance year, the patient is included in the denominator, if the following criteria are met in the denominator identification period between July 1, 2020, and June 30, 2021:</p> <ul style="list-style-type: none"> <li>• Have a diagnosis of OUD</li> <li>• Receive pharmacotherapy for OUD</li> </ul> <p><b>Updated denominator definition:</b> Added: Qualifying Encounter – Encounter during the performance year. Revised: Denominator Identification Period – The period in which eligible adults receive pharmacotherapy for OUD. The denominator identification period is defined as the 12-month period from 07/1/2020 to 6/30/2021. The denominator identification period includes the first 6 months of the reporting year and the last 6 months of the previous year to ensure that all included patients can be observed for at least 180 days of treatment in the reporting year. Patients started on treatment in the second half of the reporting year will be included in the denominator of the subsequent year. The patient must have at least one OUD medication and one visit with a OUD diagnosis during the denominator identification period to be eligible for the measure.</p> <p><b>Updated denominator criteria:</b> Revised: Adults aged <math>\geq</math> 18 years on date of qualifying encounter. Encounter during the measurement period.</p> <p><b>Updated denominator exclusion:</b> Removed: Pharmacotherapy for OUD initiated after June 30th of 2020.</p> <p><b>The numerator note is revised to read:</b> Numerator compliance is expected to be determined within an 18-month period that includes the measurement period and the 6 months prior to the measurement period (July 1, 2020– December 31, 2021).</p>
Steward:	University of Southern California
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed to update the measure to ensure the denominator eligible encounter occurs within the current performance period and the initiation of pharmacotherapy for opioid use disorder (OUD) occurs within the denominator identification period to allow for assessment of at least 180 days for continuous pharmacotherapy for OUD. Additionally, we proposed to update the definitions by adding an additional definition of qualifying encounter to clarify which encounters are denominator eligible and revising the denominator identification period definition to align with and clarify the changes to the denominator in regards to timing and eligibility. The numerator note is being revised to align with these changes outlined above and reiterates the guidance pertaining to the timeframes allowed for clinicians to determine if the patient was on at least 180 days for continuous pharmacotherapy for OUD
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q468 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.107 Functional Status After Lumbar Fusion**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	469
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Person and Caregiver-Centered Experience and Outcomes
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	For patients 18 years of age and older who had a lumbar fusion procedure, functional status is rated by the patient as less than or equal to 22 OR a change of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a)* at one year (9 to 15 months) postoperatively.
<b>Substantive Change:</b>	<b>Updated denominator exclusion:</b> Revised: Patient had cancer, acute fracture or infection related to the lumbar spine OR patient had neuromuscular, idiopathic or congenital lumbar scoliosis.
<b>Steward:</b>	Minnesota Community Measurement
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Patient Reported Outcome
<b>Rationale:</b>	We proposed to add neuromuscular scoliosis to the denominator exclusion based upon feedback from clinicians following statewide implementation of the measure. We agreed that patients with this type of scoliosis should be removed to help create a more heterogeneous population, which reflects the original intent of this denominator exclusion.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q469 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.108 Functional Status After Primary Total Knee Replacement**

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	470
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients age 18 and older who had a primary total knee replacement procedure, functional status is rated by the patient as greater than or equal to 37 on the Oxford Knee Score (OKS) at one year (9 to 15 months) postoperatively.
Substantive Change:	<p><b>The description is revised to read:</b> For patients age 18 and older who had a primary total knee replacement procedure, functional status is rated by the patient as greater than or equal to 37 on the Oxford Knee Score (OKS) or a 71 or greater on the KOOS, JR tool at one year (9 to 15 months) postoperatively.</p> <p><b>Updated instructions:</b> Revised: NOTE: This measure is a target-based measure, where the numerator is met by having a one-year postoperative Oxford Knee Score (OKS) greater than or equal to 37 or a KOOS, JR score greater than or equal to 71. It is expressed as a proportion or rate. Patients having received a primary total knee replacement procedure who are not assessed for functional status postoperatively remain in the denominator and are considered as not meeting the target. The measure intent is that MIPS eligible clinicians will submit all denominator eligible procedures for performance calculation.</p> <p><b>The numerator is revised to read:</b> All eligible patients whose functional status is greater than or equal to 37 on the Oxford Knee Score (OKS) or greater than or equal to 71 on the KOOS, JR patient reported outcome tool at one year (9 to 15 months) postoperatively.</p> <p><b>Updated numerator definition:</b> Added:            KOOS, JR - The KOOS, JR was developed from the original long version of the Knee injury and Osteoarthritis Outcome Score (KOOS) survey using Rasch analysis. The KOOS, JR contains 7 items from the original KOOS survey. Items are coded from 0 to 4, none to extreme respectively. KOOS, JR is scored by summing the raw response (range 0-28) and then converting it to an interval score using the table provided below. The interval score ranges from 0 to 100 where 0 represents total knee disability and 100 represents perfect knee health. This short form tool was developed by Stephen Lyman, PhD at the Hospital for Specialty Surgery in 2017. <a href="https://www.hss.edu/hoos-jr-koo-jr-outcomes-surveys.asp">https://www.hss.edu/hoos-jr-koo-jr-outcomes-surveys.asp</a>            KOOS, JR Target - A patient who is assessed postoperatively at one year (9 to 15 months) after the procedure rates their functional status score as greater than or equal to 71.</p> <p><b>The numerator note is revised to read:</b> The following situations are those in which the numerator targets cannot be reached and Performance Not Met (M1046) is submitted:</p> <ul style="list-style-type: none"> <li>• Oxford Knee Score (OKS) or Knee injury and Osteoarthritis Outcome Score Joint Replacement (KOOS, JR) is not administered postoperatively at one year (9 to 15 Months)</li> <li>• Functional status is measured using a different patient-reported functional status tool or Oxford Knee Score (OKS) version or Knee injury and Osteoarthritis Outcome Score Joint Replacement (KOOS, JR)</li> <li>• Postoperative Oxford Knee Score (OKS) or Knee injury and Osteoarthritis Outcome Score Joint Replacement (KOOS, JR) is administered less than 9 Months or greater than 15 Months</li> <li>• Postoperative Oxford Knee Score (OKS) is less than 37 or Knee injury and Osteoarthritis Outcome Score Joint Replacement (KOOS, JR) is less than 71.</li> </ul> <p><b>The numerator options are revised to read:</b>  <b>Performance Met:</b> Functional status measured by the Oxford Knee Score (OKS) at one year (9 to 15 months) postoperatively was greater than or equal to 37 or Knee injury and Osteoarthritis Outcome Score Joint Replacement (KOOS, JR) was greater than or equal to 71.  <b>Performance Not Met:</b> Functional status measured by the Oxford Knee Score (OKS) or the Knee injury and Osteoarthritis Outcome Score Joint Replacement (KOOS, JR) at one year (9 to 15 months) postoperatively was less than 37.  <b>Performance Not Met:</b> Functional status measured by the Oxford Knee Score (OKS) at one year (9 to 15 months) postoperatively was less than 37 or the Knee injury and Osteoarthritis Outcome Score Joint Replacement (KOOS, JR) was less than 71.</p>
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient Reported Outcome
Rationale:	We proposed to update the measure to allow for the inclusion of the Knee injury and Osteoarthritis Outcome Score Joint Replacement (KOOS, JR) tool as numerator compliance. The KOOS, JR is recommended by the American Academy of Orthopaedic Surgeons (AAOS) and is part of the Joint Commission on Accreditation of Healthcare Organizations (JCAHO) accreditation and is an appropriate tool for the purposes of this measure. The language was updated throughout the measure to reflect this update and to define numerator compliance when utilizing the KOOS, JR tool.
	<p>We proposed a substantive change to numerator options; however, during the quality measure annual revision process with the measure steward, there was additional language refinement. Therefore, we are finalizing the substantive change to state:</p> <p><b>Performance Met:</b> Functional status measured by the Oxford Knee Score (OKS) at one year (9 to 15 months) postoperatively was greater than or equal to 37 or Knee injury and Osteoarthritis Outcome Score Joint Replacement (KOOS, JR) was greater than or equal to 71.</p> <p><b>Performance Not Met:</b> Functional status was not measured by the Oxford Knee Score (OKS) or the Knee injury and Osteoarthritis Outcome Score Joint Replacement (KOOS, JR.) at one year (9 to 15 months) postoperatively</p> <p><b>Performance Not Met:</b> Functional status measured by the Oxford Knee Score (OKS) at one year (9 to 15 months) postoperatively was less than 37 or the Knee injury and Osteoarthritis Outcome Score Joint Replacement (KOOS, JR) was less than 71.</p>

**D.109 Functional Status After Lumbar Discectomy/Laminectomy**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	471
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Person and Caregiver-Centered Experience and Outcomes
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	For patients age 18 and older who had lumbar discectomy/laminectomy procedure, functional status is rated by the patient as less than or equal to 22 OR a change of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) * at three months (6 to 20 weeks) postoperatively.
<b>Substantive Change:</b>	<b>Updated denominator exclusion:</b> Revised: Patient had cancer, acute fracture or infection related to the lumbar spine OR patient had neuromuscular, idiopathic or congenital lumbar scoliosis.
<b>Steward:</b>	Minnesota Community Measurement
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Patient Reported Outcome
<b>Rationale:</b>	We proposed to add neuromuscular scoliosis to the denominator exclusion based upon feedback from clinicians following statewide implementation of the measure. We agreed that patients with this type of scoliosis should be removed to help create a more heterogeneous population, which reflects the original intent of this denominator exclusion.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q471 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

**D.110 Leg Pain After Lumbar Fusion**

Category	Description
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	473
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Person and Caregiver-Centered Experience and Outcomes
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	For patients 18 years of age or older who had a lumbar fusion procedure, leg pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain* scale at one year (9 to 15 months) postoperatively. * hereafter referred to as VAS Pain.
<b>Substantive Change:</b>	<b>Updated denominator exclusion:</b> Revised: Patient had cancer, acute fracture or infection related to the lumbar spine OR patient had neuromuscular, idiopathic or congenital lumbar scoliosis.
<b>Steward:</b>	Minnesota Community Measurement
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Patient Reported Outcome
<b>Rationale:</b>	We proposed to add neuromuscular scoliosis to the denominator exclusion based upon feedback from clinicians following statewide implementation of the measure. We agreed that patients with this type of scoliosis should be removed to help create a more heterogeneous population, which reflects the original intent of this denominator exclusion.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q473 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

**D.111 International Prostate Symptom Score (IPSS) or American Urological Association-Symptom Index (AUA-SI)  
Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	476
<b>CMS eCQM ID:</b>	CMS771v2
<b>National Quality Strategy Domain:</b>	Person and Caregiver-centered Experience and Outcomes
<b>Current Collection Type:</b>	eCQM Specifications
<b>Current Measure Description:</b>	Percentage of patients with an office visit within the measurement period and with a new diagnosis of clinically significant Benign Prostatic Hyperplasia who have International Prostate Symptoms Score (IPSS) or American Urological Association (AUA) Symptom Index (SI) documented at time of diagnosis and again 6-12 months later with an improvement of 3 points.
<b>Substantive Change:</b>	<b>The title is revised from ‘International Prostate Symptom Score (IPSS) or American Urological Association-Symptom Index (AUA-SI) Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia’ to: Urinary Symptom Score Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia.</b>  <b>Per the ‘Telehealth Guidance for Electronic Clinical Quality Measures (eCQMs) for Eligible Professional/Eligible Clinician 2021 Quality Reporting’:</b> Medicare telehealth eligible codes found in any encounter value set must only be used for in-person encounters for the following eCQMs.
<b>Steward:</b>	Large Urology Group Practice Association and Oregon Urology Institute
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Patient Reported Outcome
<b>Rationale:</b>	We proposed to shorten the title to replace the very specific score wording with more general wording to be more consistent with definitions and language used within the measure.  We proposed to remove telehealth encounters from the denominator and denominator exclusions as telehealth is not an appropriate setting for this measure. This guidance can be found in a separate document that will be published on the eCQI Resource Center.
We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q476 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.112 Functional Status Change for Patients with Neck Impairments**

<b>Category</b>	<b>Description</b>
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	478
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Person and Caregiver-centered Experience and Outcomes
<b>Current Collection Type:</b>	MIPS CQMs Specifications
<b>Current Measure Description:</b>	<p>This is a patient-reported outcome performance measure (PRO-PM) consisting of a patient-reported outcome measure (PROM) of risk-adjusted change in functional status (FS) for patients aged 14+ with neck impairments. The change in FS is assessed using the Neck FS PROM.* The measure is risk-adjusted to patient characteristics known to be associated with FS outcomes. It is used as a performance measure at the patient, individual clinician, and clinic levels to assess quality.</p> <p>*The Neck FS PROM is an item-response theory-based computer adaptive test (CAT). In addition to the CAT version, which provides for reduced patient response burden, it is available as a 10-item short form (static/paper-pencil).</p>
<b>Substantive Change:</b>	<p><b>The description is revised to read:</b> This is a patient-reported outcome measure of risk-adjusted change in functional status for patients aged 14 years+ with neck impairments. The change in functional status (FS) is assessed using the FOTO Neck FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static/paper-pencil).</p> <p><b>The definition is revised to read:</b>  <b>Functional Deficit</b> – Limitation or impairment of physical abilities/function resulting in evaluation and inclusion in a treatment plan of care.  <b>Treatment Episode</b> –A Treatment Episode is defined as beginning with an Initial Evaluation for a functional neck deficit, progressing through treatment without interruption (for example, a hospitalization or surgical intervention), and ending with Discharge signifying that the treatment has been completed. A patient currently under clinical care for a neck deficit remains in a single Treatment Episode until the Discharge is conducted and documented by the MIPS eligible clinician.  <b>Initial Evaluation</b> – An Initial Evaluation is the first encounter for a functional deficit involving the neck and includes an evaluation (CPT 97161, 97162, 97163, 97165, 97166, 97167, 99201, 99202, 99203, 99204, 99205, 99212, 99213, 99214, 99215, 98940, 98941, 98942, or 98943), or an Initial Evaluation Status M-code (M1143). A patient presenting with a neck impairment, who has had an interruption of a Treatment Episode for the same functional neck deficit secondary to an appropriate reason like hospitalization or surgical intervention, is an Initial Evaluation.  <b>Discharge</b>– Discharge is accompanied by a treatment finalization and evaluation completion M-Code (Mxxx) identifying the close of a Treatment Episode for the same neck deficit identified at the Initial Evaluation and documented by a Discharge report by the MIPS eligible clinician. An interruption in clinical care for an appropriate reason like hospitalization or surgical intervention requires a discharge from the current Treatment Episode.  <b>Encounter</b> – A visit between the patient and the provider for the purpose of assessing and/or improving a functional deficit.  <b>Patient Reported</b> – The patient directly provides answers to the FS measure items using a standardized, reliable and valid, computerized adaptive testing or short form (static/paper and pencil-type) method. If the patient cannot reliably respond independently (for example, in the presence of cognitive deficits), a suitable proxy may provide answers.</p> <p><b>The denominator is revised to read:</b> All patients aged 14 years and older with neck impairments who initiated a Treatment Episode.</p> <p><b>Updated denominator criteria:</b>  Revised: All patients aged ≥14 years on date of Initial Evaluation.  Added: With a neck impairment and/or diagnosis pertaining to a functional deficit affecting the neck.</p> <p><b>Updated denominator exclusions:</b>  Removed: Ongoing care not indicated, patient seen only 1-2 visits (e.g., home program only, referred to another provider or facility, consultation only).  Added: Patient unable to complete the Neck FS PROM at Initial Evaluation and/or Discharge due to blindness, illiteracy, severe mental incapacity or language incompatibility, and an adequate proxy is not available.</p> <p><b>The numerator is revised to read:</b> Patients who were presented with the Neck FS PROM at Initial Evaluation (Intake) and at or near Discharge (Status) for the purpose of calculating the patient’s Risk-Adjusted Functional Status Change Residual Score.</p> <p><b>The numerator definition is revised to read:</b>  <b>Patient’s Functional Status Score</b> – A functional status score is produced when the patient completes the functional status patient-reported outcome measure (either by short form or computerized adaptive testing administration). The functional status score is continuous and linear. Scores range from 0 to 100 with higher scores meaning higher functional abilities. The measure is standardized, and the scores are validated for the measurement of function for this population.  <b>Patient’s Functional Status Change Score</b> – A functional status change score is calculated by subtracting the Patient’s Functional Status Score at Initial Evaluation from the Patient’s Functional Status Score at Discharge.  <b>Predicted Functional Status Change Score</b> – Functional Status Change Scores for patients are risk adjusted using multiple linear regression methods that include the following independent variables: Patient’s Functional Status Score at Initial Evaluation, patient age, symptom acuity, surgical history, gender, specific co- morbidities, use of medication for the condition at Initial Evaluation, exercise history, history of previous treatment for the condition and type of post-surgical status. The Patient’s</p>

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

Category	Description
	<p>Functional Status Change Score is the dependent variable. For each patient completing a functional status assessment at Initial Evaluation (Intake), the regression model provides a risk-adjusted prediction of functional status change at Discharge.</p> <p><b>Risk-Adjusted Functional Status Change Residual Score</b> – The difference between the raw non-risk- adjusted Patient’s Functional Status Change Score and the Risk-Adjusted Predicted Functional Status Change Score (raw minus predicted) is the Risk-Adjusted Functional Status Change Residual Score, which is in the same units as the Patient’s Functional Status Scores, and should be interpreted as the unit of functional status change different than predicted given the risk-adjustment variables of the patient being treated. As such, the Risk-Adjusted Residual Change Score represents Risk-Adjusted Change corrected for the level of severity of the patient. Risk-Adjusted Residual Change Scores of zero (0) or greater (&gt; 0) should be interpreted as functional status change scores that were predicted or better than predicted given the risk- adjustment variables of the patient, and risk-adjusted residual change scores less than zero (&lt; 0) should be interpreted as functional status change scores that were less than predicted given the risk-adjustment variables of the patient. Aggregated Risk-Adjusted Residual Scores allow meaningful comparisons amongst clinicians or clinics.</p> <p><b>Updated numerator note:</b> Removed all.</p> <p><b>The numerator options are revised to read:</b>  <b>Performance Met:</b> Risk-Adjusted Functional Status Change Residual Score for the neck impairment successfully calculated and the score was equal to zero (0) or greater than zero (&gt; 0)  <b>Denominator Exceptions:</b></p> <ol style="list-style-type: none"> <li>1. Ongoing care not clinically indicated because the patient needed a home program only, referral to another provider or facility, or consultation only, as documented in the medical record.</li> <li>2. Ongoing care not medically possible because the patient was discharged early due to specific medical events, documented in the medical record, such as the patient became hospitalized or scheduled for surgery.</li> <li>3. Ongoing care not possible because the patient self-discharged early (e.g., financial or insurance reasons, transportation problems, or reason unknown.</li> <li>4. Patient refused to participate.</li> </ol> <p><b>Performance Not Met:</b> Risk-Adjusted Functional Status Change Residual Score for the neck impairment not measured because the patient did not complete the Neck FS PROM at Initial Evaluation and/or near Discharge, reason not given.  <b>Performance Not Met:</b> Risk-Adjusted Functional Status Change Residual Score for the neck impairment successfully calculated and the score was less than zero (&lt; 0).</p>
<b>Steward:</b>	Focus on Therapeutic Outcomes, Inc.
<b>High Priority Measure:</b>	Yes
<b>Measure Type:</b>	Patient Reported Outcome
<b>Rationale:</b>	<p>We proposed to update the measure to align with the other Focus on Therapeutic Outcomes, Inc. (FOTO) measures within MIPS. This will lessen MIPS eligible clinician burden when reporting this measure in conjunction with FOTO’s other measures as the structure and content will now align. Definitions were included to add clarity and provide guidance when reporting this measure. Additional denominator criteria for patients with a neck impairment and/or diagnosis pertaining to a functional deficit affect the neck was included to further define the appropriate patient population for this measure. Additionally, the denominator exclusions and exceptions were updated, along with the other numerator options, to align across all FOTO measures for consistency.</p> <p>In the event the proposed substantive change(s) were finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes.</p>
<p>We received no public comments on the substantive changes proposed for this measure; therefore, we are finalizing the changes to measure Q478 as proposed for the 2021 MIPS performance period/2023 MIPS payment year and future years.</p>	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**D.113 Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older**

Category	Description
<b>NQF # / eCQM NQF #:</b>	N/A / N/A
<b>Quality#:</b>	048
<b>CMS eCQM ID:</b>	N/A
<b>National Quality Strategy Domain:</b>	Effective Clinical Care
<b>Current Collection Type:</b>	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications
<b>Current Measure Description:</b>	Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.
<b>Substantive Change:</b>	<b>Modified collection type:</b> MIPS CQMs Specifications
<b>Steward:</b>	National Committee for Quality Assurance
<b>High Priority Measure:</b>	No
<b>Measure Type:</b>	Process
<b>Rationale:</b>	We proposed to remove the Medicare Part B Claims Measure Specifications collection type as it has reached the end of the topped out lifecycle as finalized in 82 FR 53640.
After consideration of public comments received under Table C.2, we are finalizing the removal of measure Q048 as indicated for the 2021 MIPS performance period/2023 MIPS payment year and future years for the Medicare Part B Claims Specifications collection type only. Measure Q048 will remain in the MIPS program for 2021 for the MIPS CQMs Specifications collection type.	

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**MISCELLANEOUS PUBLIC COMMENTS AND RESPONSES**

Note: The following table summarizes public comments received that are general to individual MIPS measures but not specific to newly proposed measures, specialty measure sets, measures proposed for removal, or measures with substantive changes. In addition, some comments summarized below are out-of-scope to our proposed changes to the MIPS quality measure set.

**Comment:** One commenter was supportive of the proposal to remove 14 quality measures that do not add value to the quality of care, and instead add more meaningful measurements.

**Response:** We thank the commenter for supporting the removal of measures from the MIPS program that do not add value to the quality of care.

**Comment:** One commenter recommended maintaining the existing MIPS quality measures to ensure consistency, reduce a burden, and allow options in the future for MVPs.

**Response:** We understand that ensuring there are measures available for future use in MVPs is important; however, we strive to ensure that all measures align with the Meaningful Measures Initiative, which includes removing those measures that are duplicative, extremely topped out or at the end of the topped out lifecycle, no longer in alignment with the current clinical guidelines, or where a meaningful benchmark cannot be created. By removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement. We encourage stakeholders to submit potential new measures that will align with the Meaningful Measures Initiative and allow MIPS eligible clinicians to maximize their potential performance within MIPS during the annual Call for Measures.

**Comment:** One commenter stated that CMS is proposing to expand the list of telehealth visits that include quality and cost measures in 2021. The commenter supported having expanded telehealth services. However, inclusion in the denominator across its measures does not translate to numerator compliance. There is certainly impact to administrative burden, and the commenter wanted to ensure data is captured and mapped appropriately for reporting. Use of telemedicine services for important clinical conditions is not yet fully understood. Some types of quality measurements (numerator compliance) may not be easily obtained via telemedicine or require additional infrastructure development such as remote monitoring. There should be additional time for adaptation.

**Response:** We thank the commenter for their comment. Each year the measure specifications are revised and reviewed to ensure coding updates and the inclusion of telehealth encounters aligns with the measure’s intent, are clinically appropriate and applicable, and are feasible for implementation. The allowance of telehealth for denominator eligibility does not translate into numerator compliance, as some quality actions are not able to be performed via telehealth, however, it is important to ensure a complete patient population is assessed for numerator compliance therefore supporting the assessment of providing quality care. We encourage the commenter to reach out to measure stewards to review expanding telehealth as a possible revision for implementation in future years and review the 2021 MIPS specifications to determine if or how telehealth is included within the measure

**Comment:** One commenter indicated that in terms of numerator compliance, CMS guidance has stated that there may be instances where the quality action cannot be completed during the telehealth visit. If an eligible clinician is providing services via telehealth but unable to complete the quality action in the numerator via telehealth, the commenter strongly believes that measure should be excluded from the list of telehealth eligible measures.

**Response:** We agree that there are some measures available via the eCQM Specifications collection type that include telehealth encounters as denominator eligible with a quality action that cannot be met via telehealth. This decision is driven by how each measure is structured and ensuring a complete and appropriate patient population. Measures that do not require a quality action for every encounter, but allow for patient report, look back periods, or completion at encounter, would be appropriate for inclusion of telehealth. For measures that have defined performance or assessment of the quality action (e.g., measure Q317: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented), telehealth encounters would not be appropriate. We would encourage the commenter to review 2021 eCQM guidance found on the eCQI Resource Center at <https://ecqi.healthit.gov/ep-ec?globalyearfilter=2020>.

**Comment:** Current eCQM standards do not allow for the use of modifiers and therefore do not clearly include or exclude telehealth encounters when these “telehealth-eligible” CPT and HCPCS codes are used.

**Response:** We do recognize that value sets by eCQMs do not include codes modifiers and would encourage stakeholders to review the 2021 eCQM guidance found on the eCQI Resource Center. In instances where a modifier is submitted, the code is used by the eCQM, however the modifier is not. As such, eCQM logic and value sets do not differentiate between in-person encounters or telehealth encounters when these “telehealth-eligible” codes are applied. Therefore, it is the eligible professionals’ and eligible clinicians’ responsibility to make sure they can meet all other aspects of the quality action within the measure specification, including other quality actions that cannot be completed via telehealth when considering which measure to report. And, that the encounter, either in-person or via telehealth, is in alignment with current measure specification level guidance. In instances where a POS modifier is applied for billing and is submitted for the eCQM, only the encounter code is used by the eCQM and the modifier is not used.

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

## APPENDIX 2: IMPROVEMENT ACTIVITIES

**NOTE:** In this final rule, for the CY 2021 performance period and future years, we are modifying two previously adopted improvement activities in the Inventory, removing one previously adopted improvement activity, and finalizing one improvement activity that was originally adopted in the March 31<sup>st</sup> COVID-19 IFC (85 FR 19277) and continued with modification in the September 2<sup>nd</sup> COVID-19 IFC (85 FR 54850 through 54851). These improvement activities are discussed in detail below.

**Table A: Changes to Previously Adopted Improvement Activities for the MIPS CY 2021 Performance Period and Future Years**

Current Improvement Activity	
Current Activity ID:	IA_BE_4
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Engagement of patient through implementation of improvements in patient portal
Current Activity Description:	Access to an enhanced patient portal that provides up to date information related to relevant chronic disease health, blood pressure control, and includes interactive features allowing patients to enter health information and/or enables bidirectional communication about medication changes and adherence.
Current Weighting:	Medium
Proposed Change and Rationale:	<p>This improvement activity was originally finalized in the CY 2017 QPP final rule (81 FR 77825). This modification would add language to include caregivers as additional potential users of the patient portal, instead of just patients and clinicians, given the important role caregivers can play in bidirectional information exchange regarding the clinical care of the patient.</p> <p>This modification would also add language to clarify that the portal’s use should be for “bidirectional information exchange between the patient and their provider” and “the primary use...should be clinical, and not administrative.”</p> <p>In addition, the modifications would replace existing description with a nonexhaustive list of examples of bidirectional portal functions that are clinical rather than administrative. The list of examples would include: “brief patient reevaluation by messaging; communication about test results and follow up; communication about medication adherence, side effects, and refills; blood pressure management for a patient with hypertension; blood sugar management for a patient with diabetes; and any relevant acute or chronic disease management.”</p>
Proposed Revised Activity Description:	To receive credit for this activity, MIPS eligible clinicians must provide access to an enhanced patient/caregiver portal that allows users (patients or caregivers and their clinicians) to engage in bidirectional information exchange. The primary use of this portal should be clinical and not administrative. Examples of the use of such a portal include, but are not limited to: brief patient reevaluation by messaging; communication about test results and follow up; communication about medication adherence, side effects, and refills; blood pressure management for a patient with hypertension; blood sugar management for a patient with diabetes; or any relevant acute or chronic disease management.
Comments:	Several commenters supported the modification of this improvement activity. Several commenters noted that caregivers are a critical component of patient-centered care. A few commenters noted the importance of bidirectional information exchange in the provision of care.
Response:	The modification to this improvement activity includes caregivers in the bidirectional information exchange regarding the clinical care of patients and provides clarity that the portal should be used for bidirectional information exchange that is clinical not administrative in nature.
Final Action:	After consideration of the public comments received, we are finalizing changes to this

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

	improvement activity as proposed.
<b>Finalized Improvement Activity</b>	
<b>Activity ID:</b>	<b>IA_BE_4</b>
Subcategory:	Beneficiary Engagement
Activity Title:	Engagement of patient through implementation of improvements in patient portal
Activity Description:	To receive credit for this activity, MIPS eligible clinicians must provide access to an enhanced patient/caregiver portal that allows users (patients or caregivers and their clinicians) to engage in bidirectional information exchange. The primary use of this portal should be clinical and not administrative. Examples of the use of such a portal include, but are not limited to: brief patient reevaluation by messaging; communication about test results and follow up; communication about medication adherence, side effects, and refills; blood pressure management for a patient with hypertension; blood sugar management for a patient with diabetes; or any relevant acute or chronic disease management.
Weighting:	Medium
<b>Current Improvement Activity</b>	
<b>Current Activity ID:</b>	<b>IA_AHE_7</b>
Current Subcategory:	Achieving Health Equity
Current Activity Title:	Comprehensive Eye Exams
Current Activity Description:	<p>To receive credit for this activity, MIPS eligible clinicians must promote the importance of a comprehensive eye exam, which may be accomplished by providing literature and/or facilitating a conversation about this topic using resources such as the “Think About Your Eyes” campaign and/or referring patients to resources providing no-cost eye exams, such as the American Academy of Ophthalmology’s EyeCare America and the American Optometric Association’s VISION USA.</p> <p>This activity is intended for:</p> <ul style="list-style-type: none"> <li>● Non-ophthalmologists / optometrists who refer patients to an ophthalmologist/optometrist;</li> <li>● Ophthalmologists/optometrists caring for underserved patients at no cost; or</li> <li>● Any clinician providing literature and/or resources on this topic.</li> </ul> <p>This activity must be targeted at underserved and/or high-risk populations that would benefit from engagement regarding their eye health with the aim of improving their access to comprehensive eye exams.</p>
Current Weighting:	Medium
Proposed Change and Rationale:	This improvement activity was originally finalized in the CY 2019 PFS final rule (83 FR 59452). This modification would add language that expands the types of services that eligible clinicians can promote to underserved and/or high-risk populations to receive credit for this activity. Specifically, we are proposing to add the following sentence: “promoting access to vision rehabilitation services as appropriate for individuals with chronic vision impairment.” Also, “or vision rehabilitation services” would be added to the end of the activity description. These modifications would broaden this improvement activity to eligible clinicians who promote vision rehabilitation services, if they are serving patients with vision impairments detected during comprehensive eye exams.
Proposed Revised Activity Description:	To receive credit for this activity, MIPS eligible clinicians must promote the importance of a comprehensive eye exam, which may be accomplished by any one or more of the following: <ul style="list-style-type: none"> <li>● providing literature,</li> <li>● facilitating a conversation about this topic using resources such as the “Think About Your Eyes” campaign,</li> <li>● referring patients to resources providing no-cost eye exams, such as the American Academy of Ophthalmology’s EyeCare America and the American Optometric Association’s VISION USA, or</li> </ul>

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

	<ul style="list-style-type: none"> <li>● promoting access to vision rehabilitation services as appropriate for individuals with chronic vision impairment.</li> </ul> <p>This activity is intended for:</p> <ul style="list-style-type: none"> <li>● Non-ophthalmologists / optometrists who refer patients to an ophthalmologist/optometrist;</li> <li>● Ophthalmologists/optometrists caring for underserved patients at no cost; or</li> <li>● Any clinician providing literature and/or resources on this topic.</li> </ul> <p>This activity must be targeted at underserved and/or high-risk populations that would benefit from engagement regarding their eye health with the aim of improving their access to comprehensive eye exams or vision rehabilitation services.</p>
Comments:	Several commenters supported the modification of this improvement activity.
Response:	We appreciate the support for this modification. The modification to this improvement activity allows clinicians also to receive credit by providing vision rehabilitation services to patients who are underserved and/or high-risk with vision impairments detected during comprehensive exams.
Final Action:	After consideration of the public comments received, we are finalizing changes to this improvement activity as proposed.
<b>Finalized Improvement Activity</b>	
<b>Activity ID:</b>	<b>IA_AHE_7</b>
Subcategory:	Achieving Health Equity
Activity Title:	Comprehensive Eye Exams
Activity Description:	<p>To receive credit for this activity, MIPS eligible clinicians must promote the importance of a comprehensive eye exam, which may be accomplished by any one or more of the following:</p> <ul style="list-style-type: none"> <li>● providing literature,</li> <li>● facilitating a conversation about this topic using resources such as the “Think About Your Eyes” campaign,</li> <li>● referring patients to resources providing no-cost eye exams, such as the American Academy of Ophthalmology’s EyeCare America and the American Optometric Association’s VISION USA, or</li> <li>● promoting access to vision rehabilitation services as appropriate for individuals with chronic vision impairment.</li> </ul> <p>This activity is intended for:</p> <ul style="list-style-type: none"> <li>● Non-ophthalmologists / optometrists who refer patients to an ophthalmologist/optometrist;</li> <li>● Ophthalmologists/optometrists caring for underserved patients at no cost; or</li> <li>● Any clinician providing literature and/or resources on this topic.</li> </ul> <p>This activity must be targeted at underserved and/or high-risk populations that would benefit from engagement regarding their eye health with the aim of improving their access to comprehensive eye exams or vision rehabilitation services.</p>

It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

**TABLE B: Improvement Activity for Removal for the MIPS CY 2021 MIPS Performance Period and Future Years**

In this final rule, we are finalizing the removal of one previously finalized improvement activity from the MIPS Program for the MIPS CY 2021 performance period/2023 MIPS payment year and future years. This improvement activity is discussed in detail below. Improvement activity removal factors are discussed in the MIPS CY 2020 final rule (84 FR 62568 through 63563).

<b>Current Improvement Activity</b>	
<b>Current Activity ID:</b>	<b>IA_CC_5</b>
Current Subcategory:	Care Coordination
Current Activity Title:	CMS Partner in Patients Hospital Engagement Network
Current Activity Description:	Membership and participation in a CMS Partnership for Patients Hospital Engagement Network.
Current Weighting:	Medium
Removal Rationale:	Subsequent to publication of the proposed rule, we became aware that the underlying program, which forms the basis for this improvement activity, has expired. The Partner in Patients Hospital Engagement Network activity description requires membership and participation in a CMS Partnership for Patients Hospital Engagement Network which ended March 31, 2020, and may be found at <a href="https://innovation.cms.gov/innovation-models/partnership-for-patients">https://innovation.cms.gov/innovation-models/partnership-for-patients</a> . Because the Partnership for Patients Hospital Engagement Network has ended and performance of this activity will no longer be possible starting with the CY 2021 performance year, this improvement activity is obsolete (Factor 7, 84 FR 62988) and no longer available for clinicians to participate in; therefore, we are finalizing removal of this improvement activity beginning with the CY 2021 performance year/2023 MIPS payment year to avoid any potential confusion.
Comments:	N/A – Not included in the notice of proposed rulemaking.
Response:	N/A – Not included in the notice of proposed rulemaking.
Final Action:	We are finalizing the removal of this improvement activity beginning with the CY 2021 performance year/2023 MIPS payment year.
<b>Finalized Improvement Activity</b>	
<b>Activity ID:</b>	N/A – Removed

**Table C: Finalization of Improvement Activity Previously Adopted in the March 31<sup>st</sup> COVID-19 IFC (85 FR 19277) and Continued with Modification in the September 2<sup>nd</sup> COVID -19 IFC (85 FR 54850 through 54851) for the MIPS CY 2021 Performance Period**

<b>Original Improvement Activity</b>	
<b>Original Activity ID:</b>	<b>IA_ERP_XX</b>
Original Subcategory:	Emergency Response and Preparedness
Original Activity Title:	COVID-19 Clinical Trials
Original Activity Description:	<p>To receive credit for this activity, a MIPS eligible clinician must participate in a COVID-19 clinical trial utilizing a drug or biological product to treat a patient with a COVID-19 infection and report their findings through a clinical data repository or clinical data registry for the duration of their study. For more information on COVID-19 clinical trials we refer readers to the U.S. National Library of Medicine website at <a href="https://clinicaltrials.gov/ct2/results?cond=COVID-19">https://clinicaltrials.gov/ct2/results?cond=COVID-19</a>.</p> <p>This improvement activity was finalized for the MIPS CY 2020 performance period only in response to the PHE for COVID-19.</p>
Original Weighting:	High
Original Comments:	Several commenters supported our efforts to encourage and recognize clinician participation in COVID-related clinical trials through the finalization of this improvement activity.
Original Responses:	We appreciate the commenters’ support. We believe that clinicians who treat patients diagnosed with COVID-19 and simultaneously submit relevant data regarding that patient to a clinical data registry for COVID-19 research should receive credit. We believe that all clinical data gathered in the treatment of patients diagnosed with COVID-19 may be helpful in finding a solution to end this pandemic. Encouraging clinicians collectively to utilize a clinical data registry for data reporting could facilitate sharing of data for use in additional clinical studies with larger sample sizes. These additional and larger clinical studies are likely to identify efficacy of certain treatments, which in turn could result in wider improvements in health outcomes, including reduced severity and mortality due to COVID-19 across the nation. This could benefit patients nationwide as well as improve clinical practice and care delivery for the patients of the clinician attesting to this improvement activity.
<b>Modified Improvement Activity</b>	
<b>Modified Activity ID:</b>	<b>IA_ERP_3</b>
Modified Subcategory:	Emergency Response and Preparedness
Modified Activity Title:	COVID-19 Clinical Data Reporting with or without Clinical Trial
Change and Rationale:	<p>Following the publication of the March 31<sup>st</sup> IFC for COVID-19, we received several inquiries through meetings, email correspondence, and Quality Payment Program help desk requesting further information on whether a clinician working with COVID-19 patients who provides their data to a clinical data registry, without participating in a clinical trial, may get credit for this activity. The Quality Payment Program help desk tracks, documents, and resolves inquiries submitted by MIPS eligible clinicians and groups. Stakeholders may submit inquiries to the help desk via 1-866-288-8292 (Monday-Friday 8 a.m.-8 p.m. ET) or email <a href="mailto:QPP@cms.hhs.gov">QPP@cms.hhs.gov</a>. Some stakeholders believed that clinicians providing care to patients with COVID-19 outside of a clinical trial that report those data through a clinical data registry should receive credit for this activity. It came to our attention that clinical data registries not only collect data as part of clinical trials, but also collect data from clinicians not participating in clinical trials. The improvement activity as written was causing confusion for clinicians and groups attempting to meet the needs of patients and address gaps in research. Since IA_ERP_3 titled “COVID-19 Clinical Trials” was established, this improvement activity has been</p>

**INFORMATION NOT RELEASABLE TO THE PUBLIC UNLESS AUTHORIZED BY LAW:**

This information has not been publicly disclosed and may be privileged and confidential. It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

	<p>the subject of approximately 30 percent of the inquiries to the Quality Payment Program help desk, demonstrating the desire for clinicians to improve clinical care and overall outcomes for patients diagnosed with COVID-19 by conducting this improvement activity, but also indicating the need for further clarity in its activity description. As a result, we expanded the improvement activity to include clinicians participating in the care of a patient diagnosed with COVID-19 who simultaneously submit their clinical patient data to a clinical data registry for research. Thus, in order to receive credit for this improvement activity, a MIPS eligible clinician or group must: (1) Participate in a COVID-19 clinical trial utilizing a drug or biological product to treat a patient with a COVID-19 infection and report their findings through a clinical data repository or clinical data registry for the duration of their study; or (2) participate in the care of patients diagnosed with COVID-19 and simultaneously submit relevant clinical data to a clinical data registry for ongoing or future COVID-19 research. Data would be submitted to the extent permitted by applicable privacy and security laws.</p> <p>We also modified the improvement activity title to reflect this change. We had previously added the improvement activity to the Inventory for the CY 2020 performance period only in response to the PHE for COVID-19. In this IFC, we extended the newly modified COVID-19 Clinical Data Reporting with or without Clinical Trial improvement activity through the CY 2021 performance period due to the increased rate of COVID-19 infection we were experiencing nationwide. We anticipated the need for COVID-19 clinical trials and data collection/sharing through registries to continue through CY 2021 at which time we would reassess whether there remains a need for additional data sharing or if preventive measures and clinical treatments have advanced to the point where these type of data are not needed. We wanted eligible clinicians to be able to attest to this improvement activity if it is still pertinent. We believed that participation in this improvement activity was likely to result in improved outcomes by improving the collection of data clinicians use for the care of their patients as they monitor and manage COVID-19.</p>
<p>Modified Activity Description:</p>	<p>To receive credit for this improvement activity, a MIPS eligible clinician or group must: (1) participate in a COVID-19 clinical trial utilizing a drug or biological product to treat a patient with a COVID-19 infection and report their findings through a clinical data repository or clinical data registry for the duration of their study; or (2) participate in the care of patients diagnosed with COVID-19 and simultaneously submit relevant clinical data to a clinical data registry for ongoing or future COVID-19 research. Data would be submitted to the extent permitted by applicable privacy and security laws. Examples of COVID-19 clinical trials may be found on the U.S. National Library of Medicine website at <a href="https://clinicaltrials.gov/ct2/results?cond=COVID-19">https://clinicaltrials.gov/ct2/results?cond=COVID-19</a>. In addition, examples of COVID-19 clinical data registries may be found on the National Institute of Health website at <a href="https://search.nih.gov/search?utf8=%E2%9C%93&amp;affiliate=nih&amp;query=COVID19+registries&amp;commit=Search">https://search.nih.gov/search?utf8=%E2%9C%93&amp;affiliate=nih&amp;query=COVID19+registries&amp;commit=Search</a>.</p> <p>For purposes of this improvement activity, clinical data registries must meet the following requirements: (1) the receiving entity must declare that they are ready to accept data as a clinical registry; and (2) be using the data to improve population health outcomes. Most public health agencies and clinical data registries declare readiness to accept data from clinicians via a public online posting. Clinical data registries should make publically available specific information on what data the registry gathers, technical requirements or specifications for how the registry can receive the data, and how the registry may use, re-use, or disclose individually identifiable data it receives. For purposes of credit toward this improvement activity, any data should be sent to the clinical data registry in a structured format, which the registry is capable of receiving. A MIPS eligible clinician may submit the data using any standard or format that is</p>

It is for internal government use only and must not be disseminated, distributed, or copied to persons not authorized to receive the information. Unauthorized disclosure may result in prosecution to the full extent of the law.

	<p>supported by the clinician’s health IT systems, including but not limited to, certified functions within those systems. Such methods may include, but are not limited to, a secure upload function on a web portal, or submission via an intermediary, such as a health information exchange. To ensure interoperability and versatility of the data submitted, any electronic data should be submitted to the clinical data registry using appropriate vocabulary standards for the specific data elements, such as those identified in the United States Core Data for Interoperability (USCDI) standard adopted in 45 CFR 170.213.</p> <p>This improvement activity was continued through the CY 2021 performance period.</p>
<p>Modified Weighting:</p>	<p>High</p>
<p>Comments:</p>	<p>In response to the September 2<sup>nd</sup> COVID-19 IFC (85 FR 54850 through 54851), several commenters supported the proposal to expand this improvement activity to include clinicians participating in the care of a patient diagnosed with COVID-19 who simultaneously submit their clinical patient data to a clinical data registry for research. Commenters noted that this expansion will increase clinician participation in this improvement activity and increase the availability of COVID-19 patient data. One commenter specifically noted this proposal will improve data for a COVID-19 registry focused on cancer patients and appreciated that a cancer registry is acceptable to meet this improvement activity. A few commenters noted support for the extension of this improvement activity into 2021.</p> <p>Additionally, in response to the September 2<sup>nd</sup> COVID-19 IFC, a few commenters recommended additional clarifications or expansions around the COVID-19 Clinical Data Reporting with or without Clinical Trial improvement activity. One commenter requested that CMS clarify whether anyone submitting COVID-19 related data to a registry would qualify for credit for this improvement activity, whether it is a Qualified Registry (QR), Qualified Clinical Data Registry (QCDR), or a data registry that collects clinical data, provided it meets the other outlined criteria. Another commenter recommended that CMS add additional research targets to the improvement activity, including research related to diagnostic and medical devices rather than just therapeutics. One commenter noted that reporting for the COVID-19 Clinical Data Reporting with or without Clinical Trial improvement activity represents an opportunity to meet Promoting Interoperability performance category requirements and recommended that CMS coordinate with both the CDC and ONC to develop common electronic case reporting (eCR) standards.</p> <p>In response to the PFS for the CY 2021 performance period and future years NPRM, several commenters also provided support for the COVID-19 Clinical Data Reporting with or without Clinical Trial improvement activity, including extension of this improvement activity until at least the end of the 2021 reporting period. One commenter provided their disappointment that as a group reporter, they would be unable to attest to this improvement activity because they would not be able to have more than 50 percent of their group participate in clinical data reporting.</p>
<p>Response:</p>	<p>We appreciate the commenters support for the improvement activity. We believe that this improvement activity will increase clinical data reporting and ultimately improve the collection of data clinicians use for the care of their patients. We anticipate that clinical data gathered in the treatment of patients with COVID-19 may be helpful in finding a solution to end this pandemic. To clarify, to receive credit for this improvement activity, a MIPS eligible clinician or group must either: (1) participate in a COVID-19 clinical trial utilizing a drug or biological product to treat a patient with a COVID-19 infection and report their findings through a clinical data repository or clinical data registry for the duration of their study; or (2) participate in the care of patients diagnosed with COVID-19 and simultaneously submit relevant clinical data to a clinical data registry for ongoing or future COVID-19 research. If the clinician or group is participating in a COVID-19 clinical trial, it must utilize a drug or biological</p>

Unauthorized disclosure may result in prosecution to the full extent of the law.

	<p>product. On the other hand, the clinician or group could participate in the care of patients diagnosed with COVID-19 and simultaneously submit relevant clinical data to a clinical data registry for ongoing or future COVID-19 research. This latter option is more broad and could include use of diagnostics and medical devices. In addition, for purposes of this improvement activity, clinical data registries must meet the following requirements: (1) the receiving entity must declare that they are ready to accept data as a clinical registry; and (2) be using the data to improve population health outcomes. We refer readers to the activity description for full details. In many cases, this could include a Qualified Registry (QR), Qualified Clinical Data Registry (QCDR), or a data registry that collects clinical data, so long as it meets the stated requirements.</p> <p>We will take into consideration the recommendation that we coordinate with CDC and ONC to develop common electronic case reporting (eCR) standards related to this improvement activity. We understand the disappointment that this improvement activity is more difficult for group reporters to attest.</p>
Final Action:	After consideration of the public comments received, we are adopting this improvement activity as finalized in the September 2nd COVID-19 IFC (85 FR 54850 through 54851) to apply through the CY 2021 performance year.
<b>Finalized Improvement Activity</b>	
Activity ID:	<b>IA ERP 3</b>
Subcategory:	Emergency Response and Preparedness
Activity Title:	COVID-19 Clinical Data Reporting with or without Clinical Trial
Activity Description:	<p>To receive credit for this improvement activity, a MIPS eligible clinician or group must: (1) participate in a COVID-19 clinical trial utilizing a drug or biological product to treat a patient with a COVID-19 infection and report their findings through a clinical data repository or clinical data registry for the duration of their study; or (2) participate in the care of patients diagnosed with COVID-19 and simultaneously submit relevant clinical data to a clinical data registry for ongoing or future COVID-19 research.
